MATH INQUIRERS PLACEMENT CHECK

Ages 9-11

Covers Primary 4 topics. Open to a year either side • About 40 minutes • No calculator

Name or username: _____ Age: _____ Date: _____

How it works. This is a friendly check, not a test. Your child answers on their own. Read a question aloud if they ask, but do not help with the maths. If they are stuck, say "Try your best, or skip it". Working on scrap paper is fine.
Not learnt it yet? Some questions may use ideas your child has not met at school. That is fine and useful to know. Tick "not learnt yet" and move on.

Warm-up

1 A bag has 9 sweets. How many sweets are in 7 bags?

☐ not learnt yet

2 Fill in the blank: 2/3 = ?/12

☐ not learnt yet

3 A rectangle is 7 cm long and 6 cm wide. What is its area? Write your answer with units.

☐ not learnt yet

4 5000 - 1346 = ?

☐ not learnt yet

Main questions

5 A factor of 18 is a number that divides 18 exactly with nothing left over. Write down all the factors of 18.

☐ not learnt yet

6 Round 48,572 to the nearest thousand.

☐ not learnt yet

7 12 + 6 x 3 - 4 = ?

☐ not learnt yet

8 2 and 3/5 + 1 and 4/5 = ? Write your answer as a mixed number.

☐ not learnt yet

9 A ribbon is 3.7 m long. Another ribbon is 2.85 m long. What is the total length? Write your answer in metres.

☐ not learnt yet

10 A rectangle has a perimeter of 36 cm. It is 11 cm long. How wide is it?

☐ not learnt yet

Brain stretchers

Optional. These are meant to be tricky, and most children will not finish them. Have a go at any that look fun.

11 (Brain stretchers are hard on purpose. Most children do not finish both, and that is fine. Try one!) I am a number between 30 and 50. I am a multiple of 4 and a multiple of 6. My digits add up to 9. What number am I?

☐ not learnt yet

12 Ben has 3 times as many marbles as Cara. Ben gives 12 marbles to Cara. Now they have the same number. How many marbles did Ben have at first?

☐ not learnt yet

YOUR CHILD'S RESULT

Which level fits?

Mark the answers with the key (ask us for it, or use the tutor key). Add up the marks, then find your row. This is a guide. You make the final choice, and you can change level free of charge before lesson 1.

Warm-up: ____ / 4 **Main questions:** ____ / 6 **Brain stretchers (optional):** ____ / 2
Ticked "not learnt yet": ____

Main questions	What it suggests
4 to 6	Join **Ages 9-11 (Level 4)**. Your child has the foundations and will enjoy the thinking. If the stretchers also went well (1 or more), you could try the Ages 10-12 (Level 5) check as well.
2 or 3	A short chat with a tutor and the free taster lesson will show which level feels best. Ages 9-11 (Level 4) with a little support suits many children here. If the warm-up score is 2 or less, Ages 8-10 (Level 3) may be the more comfortable start.
0 or 1	We suggest **Ages 8-10 (Level 3)**. Ideas build step by step, and a confident start matters more than a fast one. If many questions were ticked "not learnt yet", that simply means the topics have not been taught yet.

Finding it easy?
Choose the level that fits the score, not the school year. Every level has open investigations for children who want more.

Found it hard?
That is useful to know, and it says nothing about how clever your child is. A level that feels comfortable builds confidence, and your child can always move up.

Skills covered

Subtraction and times tables; Factors and multiples; Rounding 5-digit numbers; Order of operations; Fractions (mixed numbers); Decimals; Area and perimeter; Bar models and number puzzles; This check samples number, fractions, decimals, area and perimeter only. Angles, symmetry, nets and graphs are not in it.

Next step. Send us the scores and your preferred level when you enrol. Prices are the same at every level, and a tutor can talk it through first. Small groups of up to 8, live online.
