TUTOR GUIDE • LEVEL 1 • TERM 2 • LESSON 6 OF 10

Skip-Count Tables

Big idea: Tables are skip counts, and the last digits show a pattern. A table is counting in jumps: the 5s are 5, 10, 15 and so on. 6 jumps of 5 is 6 × 5 = 30. The last digits make a pattern.

90 minutes • live online or face to face • up to 8 children • ages 6-8 • Notice it. Test it. Explain why.

1. At a glance

Strand	Multiplication and Division (Tables of 2, 5 and 10 as skip counts, multiplying within 40 (Primary 1, Multiplication and Division, p. 31); Tables of 3 and 4 (Primary 2, p. 33); Numbers that are in two tables (common multiples, Primary 4, p. 37)) Strand label for the tutor only. The 2, 5 and 10 tables within 40 are Primary 1 content and fill Start here. BEYOND PRIMARY 1 ON PURPOSE: the 3 and 4 tables are Primary 2 content (p. 33) and numbers that are in two tables (common multiples) are Primary 4 content (p. 37), so Think harder (the 4s as doubled 2s, numbers in both the 2s and the 5s) and Go further (the 4s and 3s, three tables) go past the school Primary 1 syllabus. Tables of 6 to 9 are Primary 3 and are left out. Owner decision, 22 Oct 2026: strong content with scaffolding, said plainly to families. Say this on the parent page and in the opening of the guide; do not describe the lesson as MOE-aligned or syllabus-aligned. Reading order: 6 jumps of 5 is 6 × 5 (jumps first, then the size of the jump); either order is accepted in an answer. Contest tag (tutor only): numbers in two tables, shared multiples.
Objectives	• Build the 5s, 2s and 10s by counting in jumps along a 100 square and say facts such as "6 fives is 30" and 6 × 5 = 30. • Say that a table is skip counting, tell 6 × 5 (6 jumps of 5) from 6 + 5, and write a missing number in a table row (products to 40). • Notice the last digits of each table: 5 or 0 for the 5s, 0 for the 10s and 0, 2, 4, 6 or 8 for the 2s. • Think harder: use the 2s to find the 4s (4 × 6 is double 2 × 6), find the numbers that are in both the 2s and the 5s, and test a number by its last digit. • Go further: the 4s and 3s tables to 40 and the numbers they share with the 5s.
Joining cold	**Remember warm-up covers:** Count in 2s, 5s and 10s along a number square (Term 1); Jumps of the same size along a number line (Term 1); 5 groups of 6 as repeated addition: 6 + 6 + 6 + 6 + 6 (Term 2 Lesson 5, taught again with a picture). Only counting to 20 and adding small numbers. Nothing from an earlier lesson is needed: the warm-up counts in jumps on a number square, shows jumps on a number line and builds 5 groups of 6 with a picture and one addition at a time. The word table and the × sign are taught in Explore and the Mini-lesson. Lessons 5 to 8 of Term 2 build on one another (groups, tables, sharing, stories), so try not to miss this lesson. A child who misses it watches the recording and does workbook pages 1 and 2. A child who joins here without Term 2 Lesson 5 can follow, because the warm-up shows groups of as repeated addition and the Mini-lesson says the × sign again.
Child materials	• The printed workbook with the 100 square kit page (page 6): nothing to cut • 2 or 3 coloured pencils (pencil crayons or crayons) • About 20 small things of one kind (counters, buttons, dry pasta, coins) to use as frogs or to count • A pencil, a rubber and spare paper

Tutor materials	• The slide deck • A paper copy of the 100 square and coloured pencils to show on camera if you wish • A visible clock No ruler is needed. Nothing needs to be bought: everything can be found at home. No matches, toothpicks or anything sharp. Small things never go near the mouth or ears. Pencil crayons are better than felt pens on the printed square.
Tiers	Start here (6 questions, pages 1 and 2), Think harder (3, page 3), Go further (3, page 4), Investigation and look-back (page 5), kit page (page 6). Labels are neutral; nobody is told which page they are on.
Contest-style move	Used at Think harder only: numbers that are in two tables (2s and 5s up to 40); the 4s are the 2s doubled; a table number can be tested by its last digit. Never advertised to children or parents.

Before the lesson

- Solve every workbook question yourself first. Check the lists for T2 (10, 20, 30, 40), G1 (20, 40) and G2 (15, 30) so you can answer a child who finds another number in two tables.
- Tell parents a week before: print the workbook pages and the 100 square kit page (nothing to cut), and find coloured pencils and about 20 small things. Small things stay away from mouths and younger children. Send next lesson's workbook at the same time (it has the groups mat).
- Have the slides open and check the 100 square is visible on screen share. Have your own 100 square and a counter to show on camera if you wish.
- Check the recording captures the tutor and the shared screen. Children's video is excluded; any unmuted voice is recorded. Greet children by first name and say the recording notice, then start the recording, and avoid first names while it runs.
- Be plain with families: the 2, 5 and 10 tables within 40 are Primary 1 work, but the 3 and 4 tables and numbers that are in two tables are beyond the school Primary 1 syllabus on purpose. Do not call the lesson MOE-aligned. Do not teach tables by heart; the jumps are the method. Lessons 5 to 8 of Term 2 build on one another.

Safeguarding and recording (this lesson)

- Counters and small things stay on the table: nothing goes in the mouth or ears. No matches, toothpicks or anything sharp. Keep small things away from younger brothers and sisters. Colour lightly with pencil crayons.
- This lesson uses the main room only: no breakout rooms, so the tutor sees every camera. A parent sits nearby but does not give answers.
- Nobody holds paper or a board up to the camera: a gallery view shows everyone. Children tick their own work against the answer slide, answer together on a count of three, or show fingers or a thumb for a choice. There is no private chat.
- Never read out a child's name with a right or wrong answer. The recording has the tutor, the shared screen and any voice that is unmuted. Children may mute and keep their cameras off. A child's page is never shown.
- Movement break: children need a little clear space, soft shoes or socks on a safe floor, no stairs and no running. Counting aloud is quiet; a child may stay seated.
- A child who is still stuck ticks 'I am still stuck' on the look-back page. A grown-up may photograph that page after class and send it to the business WhatsApp only; photos are kept for 90 days after the program ends. The tutor then helps in the open session next lesson. No private messages to children, and no personal phones.
- The look-back is never collected in front of the group or read out. A pass is always allowed.

2. Timing plan (90 minutes exactly)

Minutes	Part	Min	Slides	Script fills
0–2	**Opening**	2	1: Skip-Count Tables	1:31
2–8	**Remember warm-up**	6	3: Warm-up: count in jumps, Jumps on a number line, 5 groups of 6	4:50

8–12	**Sneak-peek puzzles**	4	1: Sneak-peek puzzles	3:07
12–26	**Explore**	14	3: Explore: jumps of 5, Jumps of 2 and of 10, What do you notice?	11:10
26–38	**Mini-lesson**	12	10: The 5s table, The 5s table, The 2s and the 10s, The 2s and the 10s, Last digits, Add or jump?, Double it, Double it, Your turn, Check: the facts	9:58
38–42	**Brain break**	4	1: Whisper and say	3:14
42–70	**Workbook**	28	5: Workbook page 1: Start here, Check page 1, Workbook page 2: Start here, Check page 2, Choose your next page	22:42
70–76	**Talk time**	6	2: Talk and explain, Back to the sneak-peek	4:54
76–82	**Exit ticket**	6	2: Exit ticket, Check the exit ticket	4:39
82–85	**Look-back**	3	1: Look-back	2:23
85–90	**Flex time and goodbye**	5	1: Well done, inquirers!	0:48
	Total	**90**		**69:15**

The script needs 69:15 of the 90:00 when children are quick. A slow class (speech 10% slower, children and slide changes 20% slower) needs 82:05. The last 5 minutes are a standing buffer: if you are behind, use them; do not start anything new. Clock checks: minute 12 (end of sneak-peek), minute 42 (start of workbook), minute 70 (talk time). If more than 2 minutes behind at minute 42, skip in this order: Start with: cut the Mini-lesson check slide to three facts; Then: shorten Explore round 3 to the 5s only; Then: take the extra minutes from the flex time. Never skip the look-back or the camera and privacy moments.

3. Lesson script

Times show when each line should start, counted from the start of the lesson, if you keep to the script. SAY lines are spoken in your own words. REC lines are the short recording-voice cues for children who watch later. Children answer aloud, with fingers or hands; no private chat; no boards held up in front of the group.

0:00 – 2:00 Opening

script 1:31 of 2:00

0:00	SLIDE	Show slide **Skip-Count Tables** (s-title)
0:15	DO	Greet each child by first name as they arrive, before the recording starts. Check that you can see each child, or ask the grown-up. [0:12]
0:27	SAY	Hello, inquirers! This lesson is recorded so a friend who is away can catch up. The recording has me, the shared screen and any voice that is unmuted. You may mute and keep your camera off.
0:45	DO	Start the recording now. From here, avoid first names. [0:05]
0:50	REC	*If you are watching the recording: hello! Get a pencil, paper, your workbook, coloured pencils and counters. Pause or rewind any time.*
1:01	SAY	Please stay muted unless I invite you to speak. Cameras on if you can, so I can see you; cameras off is fine too. Pencil ready, and your 100 square, coloured pencils and counters on the table.
1:20	SAY	Today we build tables by counting in jumps, and we look for patterns in the last digits. A table is just skip counting.
	NOTE	Say the recording notice in your own words before you start the recording: the recording has the tutor, the shared screen and any unmuted voice; children may mute and keep the camera off. The routine and the four inquirer rules were introduced earlier in the term: do not re-teach them.
	NOTE	Plain statement for families when it comes up: the 2, 5 and 10 tables within 40 are Primary 1 work, but the 3 and 4 tables and numbers that are in two tables are beyond Primary 1 on purpose, always with the 100 square and counters.
	NOTE	New here? Say in one minute: our three rule words (notice it, test it, explain why); a guess is fine and you can always pass; after Start here you may choose Think harder, Go further or the Investigation; nobody holds paper to the camera. The first recording of the term shows the full routine.

2:00 – 8:00 Remember warm-up

script 4:50 of 6:00

2:00	SLIDE	Show slide **Warm-up: count in jumps** (s-rem1)
2:25	REC	*Recording: join in! Touch the numbers and say your answers before I say them. Pause if you need longer.*
2:34	SAY	Counting in jumps. Touch the yellow numbers as we count in twos: two, four, six, eight. Count with me up to eighteen.
2:46	ASK	What comes after eighteen when we count in twos? [wait about 30 s for answers]
3:20	SAY	Now count in fives: five, ten, fifteen, twenty.
3:24	ASK	What comes after thirty-five when we count in fives? [wait about 30 s for answers]
3:58	SAY	And in tens: ten, twenty, thirty, forty. Count with me.
4:04	SLIDE	Show slide **Jumps on a number line** (s-rem2)
4:28	SAY	A frog jumps five each time. It has made two jumps. Every jump is the same size.
4:37	ASK	Where does the next jump land? [wait about 30 s for answers]
5:10	ASK	Where do four jumps of five land? [wait about 30 s for answers]
5:44	SLIDE	Show slide **5 groups of 6** (s-rem3)
6:08	SAY	Five bags with six counters in each bag. We add one bag at a time: six and six make twelve.

6:18	**ASK**	Twelve plus six? [wait about 30 s for answers]
	IF STUCK	If a child is unsure about counting in jumps, touch each number on the screen and count slowly, one jump at a time on fingers. For the number line, count the jumps first, then read where the last one lands. For the bags, add one bag at a time and say the total each time.
	NOTE	Answers: 20, 40; 15, 20; 18. Children answer with a whisper, fingers or hands. Nobody writes. Do not say table yet. Joining cold: all you need is counting to 20 and adding small numbers.

8:00 – 12:00 Sneak-peek puzzles

script 3:07 of 4:00

8:00	**SLIDE**	Show slide **Sneak-peek puzzles** (s-sneak)
8:25	**REC**	*Recording: pause now and try both puzzles on your paper. Guessing is fine. Press play for the next part.*
8:34	**SAY**	Two sneak-peek puzzles: ideas we have not learnt yet. A guess is a great start, and I do not know is welcome. Nobody is marked.
8:47	**READ**	Puzzle one. Jenny puts 5 stickers on each page. She fills 4 pages. How many stickers is that altogether? You may draw or count in 5s.
9:01	**CHILDREN**	Children draw or count and write the number on their own paper. [0:40]
9:41	**READ**	Puzzle two. Ali counts in 2s: 2, 4, 6, 8 and so on up to 20. Mei counts in 5s: 5, 10, 15, 20. Which numbers do they both say? Write them.
9:59	**CHILDREN**	Children write or draw their answer. [1:00]
10:59	**SAY**	Keep your paper. Nobody shows it. We will check our own thinking later, at Talk time.
	NOTE	Puzzle 1 answer: 20 stickers. Puzzle 2 answer: 10 and 20. Look for good ideas to praise later (a child who wrote both lists). Do not write scores or keep a list.

12:00 – 26:00 Explore

script 11:10 of 14:00

12:00	**SLIDE**	Show slide **Explore: jumps of 5** (s-explore1)
12:25	**REC**	*Recording: pause now. Use your 100 square and a counter to jump in fives, twos and tens. Press play when you have tried.*
12:36	**SAY**	Your hands are the teachers. Find the 100 square on your kit page. Put a counter just to the left of the one, off the square. That is zero. This is your frog.
12:53	**SAY**	Jump five at a time. Colour lightly each number you land on and say it: one five is five, two fives is ten, three fives is fifteen.
13:06	**CHILDREN**	Children jump in fives and colour the landing numbers up to 40, saying 1 five is 5, 2 fives is 10 and so on. [2:50]
15:56	**ASK**	How many jumps did it take to land on thirty? [wait about 15 s for answers]
16:16	**ASK**	How many jumps to land on twenty-five? [wait about 15 s for answers]
16:35	**SAY**	Six fives is thirty. We write it six times five is thirty.
16:41	**SLIDE**	Show slide **Jumps of 2 and of 10** (s-explore2)
17:06	**SAY**	Round two. Use a different colour. Jump two at a time and colour each number you land on.
17:15	**CHILDREN**	Children jump in twos and colour the landing numbers up to 20 or more. [1:40]
18:55	**ASK**	How many jumps of two to land on twelve? [wait about 15 s for answers]
19:14	**SAY**	Now jump ten at a time. Put a ring round each number you land on.
19:22	**CHILDREN**	Children jump in tens and ring 10, 20, 30, 40. [1:00]
20:22	**ASK**	How many jumps of ten to land on forty? [wait about 15 s for answers]
20:42	**SLIDE**	Show slide **What do you notice?** (s-explore3)
21:06	**SAY**	Round three. Look at the last digit of each number you landed on in fives.

21:14	**ASK**	What do you notice about the last digits of the fives? What about the tens, and the twos? [wait about 75 s for answers]
22:38	**SAY**	The fives end in five or zero. The tens always end in zero. The twos end in zero, two, four, six or eight.
22:50	**ASK**	Is thirty-five in the 5s? Is twenty-eight? Thumb up or thumb down. [wait about 15 s for answers]
	IF STUCK	A child who loses their place: put the counter back on the last number they know and count the jumps again. A child who colours every number: say, only the numbers we land on. A child who starts on 1 instead of 0: the first jump from 0 lands on 5.
	NOTE	Main room only; children say their answers aloud and show fingers; you cannot see colouring on small tiles. Answers: 6, 5, 8 jumps of 5 (30, 25, 40); 6 jumps of 2 to 12; 4 jumps of 10 to 40; 35 is in the 5s and 28 is not. Colour lightly with pencil crayon. Accept any correct pattern a child finds. Do not call it a table yet beyond saying the 5s are a table.

26:00 – 38:00 Mini-lesson

script 9:58 of 12:00

26:00	**SLIDE**	Show slide **The 5s table** (s-m1)
26:25	**REC**	*Recording: keep watching and copy the examples. Rewind if you miss a step.*
26:32	**SAY**	A table is a list of jumps. Look at the fives. One jump of five is five. Two jumps of five is ten. Six fives is thirty. We write it six times five is thirty.
26:49	**ASK**	What is seven times five? How do you know? [wait about 35 s for answers]
27:28	**SLIDE**	Show slide **The 5s table** (s-m1-ans)
27:54	**SLIDE**	Show slide **The 2s and the 10s** (s-m2)
28:18	**SAY**	The twos: two, four, six. The tens: ten, twenty. Say each fact with me.
28:26	**ASK**	What is four times two? What is three times ten? [wait about 35 s for answers]
29:06	**SLIDE**	Show slide **The 2s and the 10s** (s-m2-ans)
29:30	**SLIDE**	Show slide **Last digits** (s-m3)
29:56	**SAY**	The last digits make a pattern. The fives end in five or zero. The tens end in zero. The twos end in zero, two, four, six or eight.
30:10	**ASK**	Is thirty-five in the 5s table? Is twenty-eight? How do you know? [wait about 35 s for answers]
30:50	**SLIDE**	Show slide **Add or jump?** (s-m3b)
31:16	**SAY**	Take care with the sign. Six plus five means six and five more. Six times five means six jumps of five.
31:26	**ASK**	What is four plus three? What is four times three? [wait about 30 s for answers]
32:01	**SLIDE**	Show slide **Double it** (s-m3c)
32:26	**SAY**	Doubling helps with the fours. Look at the dots. The top 2 rows are shaded: two rows of six.
32:36	**ASK**	What is two times six? All four rows are two lots of the shaded rows. What is four times six? [wait about 30 s for answers]
33:16	**SLIDE**	Show slide **Double it** (s-m3c-ans)
33:40	**SLIDE**	Show slide **Your turn** (s-m4)
34:06	**READ**	Your turn. Write the fact and the total. Seven times two. Nine times two. Two times ten.
34:15	**CHILDREN**	Children write the three totals on their own paper. [1:15]
35:30	**SLIDE**	Show slide **Check: the facts** (s-m4a)
35:55	**READ**	Fourteen. Eighteen. Twenty. Tick your own.
	NOTE	Key words to use every time: table, jump, times, in a table, last digit. Say 6 jumps of 5 for 6 × 5. The 2, 5 and 10 tables within 40 are Primary 1 work; the 3 and 4 tables are beyond it on purpose and come in Think harder and Go further. Do not teach the tables by heart: the counting is the method. Accept 5 × 6 as a correct way to write the same total.

	IF STUCK	If a child writes 6 + 5 for 6 times 5, ask them to jump: start on 0 and jump 5 six times. If a child says a number is in a table without checking, ask: how can we test it?

38:00 – 42:00 Brain break

script 3:14 of 4:00

38:00	**SLIDE**	Show slide **Whisper and say** (s-break)
38:25	**REC**	*Recording: stand up and join in! Show five fingers and say every fifth number.*
38:32	**SAY**	Stand up and get a sip of water. I count from one. On every fifth number, show five fingers and say the number.
38:44	**CHILDREN**	Count 1 to 30 slowly. Children show 5 fingers and say every fifth number. Then count 1 to 20 and children clap softly on every second number. Children may stay seated. [2:30]

42:00 – 70:00 Workbook

script 22:42 of 28:00

42:00	**SLIDE**	Show slide **Workbook page 1: Start here** (s-ws1)
42:25	**REC**	*Recording: pause now and do workbook page 1. When you finish a page, press play to check it.*
42:34	**READ**	Page 1, Start here. Question 1: count in 5s and fill in the missing numbers. Question 2: a frog jumps on a number line. Fill in the blanks. Question 3: Ravi has 4 bundles of 10 straws. How many straws does Ravi have in all?
42:59	**CHILDREN**	Page 1, questions 1 to 3. Tutor walks the cameras, asks how do you know. Wait 10 seconds before helping. [8:00]
50:59	**SLIDE**	Show slide **Check page 1** (s-ws1ans)
51:24	**READ**	Question 1: 15, 25, 35. Question 2: 3 jumps, each jump 5, and 3 times 5 is 15. Question 3: 10, 20, 30, 40: 40 straws. Tick your own page.
51:40	**SAY**	After question 3 you may choose: carry on, or try Think harder. Everyone may choose, at any time.
51:49	**SLIDE**	Show slide **Workbook page 2: Start here** (s-ws2)
52:14	**READ**	Page 2. Question 4: each bike has 2 wheels. How many wheels do 6 bikes have? Question 5: fill in the table of jumps of 5. Question 6: decide if each fact is True or False.
52:34	**CHILDREN**	Page 2, questions 4 to 6. [7:30]
60:04	**SLIDE**	Show slide **Check page 2** (s-ws2ans)
60:29	**READ**	Question 4: 6 times 2 is 12, so 12 wheels. Question 5: 10, 20, 30, 40. Question 6: true, false, true, false.
60:41	**SLIDE**	Show slide **Choose your next page** (s-choice)
61:06	**SAY**	When you have finished Start here, you can choose Think harder, Go further or the Investigation. Everyone may choose. You can swap at any time. Anything not finished is for home too.
61:22	**MOVE**	Stand and stretch for 30 seconds, then sit down and choose.
61:52	**CHILDREN**	Choice time: Think harder (page 3), Go further (page 4), the Investigation (page 5), or finish and check your own work. Tutor never says who is on which page. If Start here took the whole time, say that pages 3 to 5 are for home, and keep the time. [2:50]
	IF STUCK	Q1: count in jumps of 5 and say each number. Q2: count the jumps, then the size of each jump. Q3: count the bundles in tens. Q4: add 2 six times, or count in twos. Q5: use your 100 square. Q6: count the jumps for each fact.
	IF STUCK	A child who is still stuck ticks ‘I am still stuck’ on the look-back page. The grown-up can photograph that page after class and send it to the business WhatsApp (never a personal phone). You then help in the open session in the next lesson. Never a private message to a child.
	NOTE	Think harder is for using the 2s to find the 4s, numbers in two tables and the last digit of a number. Go further has the 4s and 3s. Do not announce who is on which page. Slow class: the workbook part needs about 30 minutes against 28, so Start here may fill most of it. Take the extra minutes from the flex time, do not skip the answer slides, and say that pages 3 to 5 are for home.

70:00 – 76:00 Talk time

script 4:54 of 6:00

70:00	SLIDE	Show slide **Talk and explain** (s-talk)
70:25	REC	*Recording: pause. Tell a grown-up if Wei is right, and test it on your 100 square.*
70:33	READ	Wei says: a number is in the 5s table if its last digit is 5 or 0. Is Wei right? How could we test it?
70:47	CHILDREN	Test Wei's rule on your 100 square with 15, 40, 28 and 33. [1:00]
71:47	CHILDREN	Talk to the grown-up next to you or to your screen for one minute. Use the sentence starter: I think... because... [0:40]
72:27	ASK	Who would like to share? Volunteers first. A pass is always fine. [wait about 80 s for answers]
73:53	SLIDE	Show slide **Back to the sneak-peek** (s-sneakans)
74:18	SAY	Remember puzzle two? Ali's twos and Mei's fives meet at ten and twenty, and later at thirty and forty. The numbers in both tables end in zero.
74:31	ASK	Did anyone change their mind about puzzle two while we worked? You can just nod. [wait about 15 s for answers]
	NOTE	Model answer: it works for the numbers we tested (15 and 40 are in the table, 28 and 33 are not); the 5s end in 5 and 0 one after the other, so a number that ends in 5 or 0 is in the table and one that ends in any other digit is not. We tested a few numbers and the jumps show why. Volunteers first; never call a child by name to answer; no tallies, no rankings. Praise the reason, not the speed.

76:00 – 82:00 Exit ticket

script 4:39 of 6:00

76:00	SLIDE	Show slide **Exit ticket** (s-exit)
76:25	REC	*Recording: pause and do the exit ticket on your own. Then press play to check it.*
76:33	SAY	Exit ticket. Three questions, on your own, without looking back. Write your answers on page 5.
76:41	READ	E1. Count in 5s. Fill in the missing numbers. E2. Which sentence is true? Write its number in the bracket. E3. Ben puts 5 stickers on each of 6 pages. How many stickers does Ben have in all? Fill in the blanks.
77:04	CHILDREN	Children answer E1 to E3 on their own. [2:50]
79:54	SLIDE	Show slide **Check the exit ticket** (s-exitans)
80:19	READ	E1: 15 and 25. E2: option 2, 4 times 10 is 40. E3: 6 times 5 is 30, and Ben has 30 stickers.
80:31	SAY	Check your own ticket and put a tick by each one you got right. Well done.
	NOTE	Nothing is collected or marked live. Children tick their own ticket. If many children miss one question, spend two minutes on it at the start of the next lesson, in the open session, no names. Do not read out any child's result.

82:00 – 85:00 Look-back

script 2:23 of 3:00

82:00	SLIDE	Show slide **Look-back** (s-look)
82:25	REC	*Recording: pause and fill in your look-back box. You can pass.*
82:30	SAY	Look-back. Tick what was hard and what helped you. Write or draw one thing you did well. If you like, tick one thing to try next time. You can pass. Nobody reads it out. If you tick 'I am still stuck', ask your grown-up to take a photo of this page after class and send it to our business WhatsApp. Then we will help you.
83:03	CHILDREN	Children fill in the look-back box on page 5. [1:20]

85:00 – 90:00 Flex time and goodbye

script 0:48 of 5:00

85:00	SLIDE	Show slide **Well done, inquirers!** (s-end)

85:25	**SAY**	Well done, inquirers. Next lesson is Sharing and Grouping. Your grown-up will get next lesson's workbook from your tutor before class. Please print it, and have about twenty counters or buttons, five plates or cups, a pencil and paper. Goodbye, and thank you to the grown-ups.
	SLIDE	Show slide **Go further: what if?** (s-opt) *(optional)*
	SAY	Optional, only if you are on time: Ben says every number in the 10s table is also in the 5s table. Is Ben right? Try 10, 20, 30 and 40.
	CHILDREN	Short think time, then take two answers. [1:30]
	SLIDE	Show slide **If we have time: pick one** (s-menu) *(optional)*
	SAY	Spare-time menu. If the whole class is ahead, pick one or two activities from the guide (about 4 minutes each).
	NOTE	This is the standing buffer. If you are behind, finish the look-back and say goodbye. Do not start anything new. Optional slide answer: yes, because each jump of 10 is two jumps of 5. If the whole class is ahead, use the Spare-time menu (guide section 3b) instead of rushing on.

3b. Spare-time menu: if the class is ahead

- Whole class ahead: use the Spare-time menu in the Flex time and the optional Go further slide. Pick one or two activities; do not start new content.
- A few children ahead: they may choose Go further or the Investigation, which are open to everyone. Never label or name a child, and never announce who is ahead.
- Never teach anything the next lesson needs. If the class is ahead, slow down: ask 'How do you know?' and let children explain, rather than rushing on.

Optional time, never added to the 90-minute sum. It comes from the 5-minute flex buffer, from slack in the parts, or from the optional Go further slide.

Activity	Minutes	You say	Recording cue	Answer
Is it always true?	4 (optional)	Ben says: every number in the 10s table is also in the 5s table. Test 10, 20, 30 and 40. Can you find a number in the 10s that is not in the 5s?	*Recording: pause. Test 10, 20, 30 and 40 in the 5s table. Can you find a number in the 10s that is not in the 5s?*	All four are in the 5s: 2, 4, 6 and 8 jumps of 5. No number breaks it: each jump of 10 is two jumps of 5.
Make a puzzle for your grown-up	4 (optional)	Pick a number up to 40. Ask your grown-up: is it in the 5s table? Then check by counting in jumps of 5.	*Recording: pause. Pick a number to 40. Ask a grown-up if it is in the 5s table, then check by counting.*	No single answer. Check with the last digit (5 or 0 means yes) and by counting in 5s.
Teach it back	3 (optional)	Pretend your grown-up or a toy has never met a table. Show them how to find 6 × 5 by jumping in 5s on the 100 square.	*Recording: pause. Show a grown-up how to find 6 × 5 by jumping in 5s on the 100 square.*	6 jumps of 5 land on 30: 5, 10, 15, 20, 25, 30. So 6 × 5 = 30.

4. Questions, answers, hints and common mistakes

Sneak-peek puzzles (minutes 8 to 12)

Puzzle 1 (access): Jenny puts 5 stickers on each page. She fills 4 pages. How many stickers is that altogether? You may draw or count in 5s.

Answer: 20

Puzzle 2 (think): Ali counts in 2s: 2, 4, 6, 8 and so on up to 20. Mei counts in 5s: 5, 10, 15, 20. Which numbers do they both say? Write them.

Answer: 10 and 20. Ali says every second number and Mei says every fifth number, and they both say 10 and 20.

Unmarked. Never put answers on boards in front of the group and never read a name with an answer. Reveal the answers where your script says (usually Talk time).

Start here (workbook pages 1 and 2)

S1 **Count in 5s. Fill in the missing numbers.**

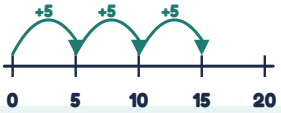

Answer: 15, 25, 35

Hint (say this first): Add 5 each time. Say the numbers: 5, 10, 15 ...
Worked solution: Counting in 5s: 5, 10, 15, 20, 25, 30, 35, 40. The missing numbers are 15, 25 and 35.
Common mistakes: Writing 14 or 16 (counting in 1s).; Skipping a number.
Time for a middle child: about 2 min.

S2 **A frog jumps along the number line. Fill in the blanks.**

(a) The frog makes ☐ jumps.
(b) Each jump is ☐ long.
(c) ☐ × ☐ = ☐☐

Answer: 3 jumps; each jump is 5; 3 × 5 = 15 (5 × 3 = 15 is also right)

Hint (say this first): Count the jumps. Then read the number on one jump.
Worked solution: The frog makes 3 jumps and each jump is 5. 5 + 5 + 5 = 15, so 3 jumps of 5 is 3 × 5 = 15.
Common mistakes: Counting the numbers on the line instead of the jumps.; Writing 3 + 5 = 8.
Time for a middle child: about 3 min.

S3 **Ravi has 4 bundles of 10 straws. How many straws does Ravi have in all?**

(a) 10 + 10 + 10 + 10 = ☐☐
(b) 4 × 10 = ☐☐

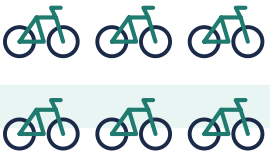

Answer: 10 + 10 + 10 + 10 = 40; 4 × 10 = 40

Hint (say this first): Count in 10s: 10, 20 ...
Worked solution: 4 bundles of 10: 10 + 10 + 10 + 10 = 40. So 4 × 10 = 40 and Ravi has 40 straws.
Common mistakes: Writing 4 + 10 = 14.; Counting the bundles as 4 straws.
Time for a middle child: about 3 min.

S4 **Each bike has 2 wheels. How many wheels do 6 bikes have?**

(a) 6 × 2 = ☐☐
(b) 6 bikes have ☐☐ wheels.

Answer: 12 wheels (6 × 2 = 12; 2 × 6 = 12 is also right)

Hint (say this first): Count in 2s: 2, 4, 6 ... Use your fingers for the bikes.
Worked solution: 6 bikes with 2 wheels each: 2 + 2 + 2 + 2 + 2 + 2 = 12. So 6 × 2 = 12.
Common mistakes: Writing 8 (6 + 2).; Losing count of the bikes.
Time for a middle child: about 3 min.

S5 **Fill in the table.**

Jumps of 5	Total
1 × 5	5
2 × 5	☐☐
4 × 5	☐☐
6 × 5	☐☐
8 × 5	☐☐

Answer: 10, 20, 30, 40

Hint (say this first): Jump in 5s on your 100 square: 5, 10, 15 ...
Worked solution: 2 × 5 = 10, 4 × 5 = 20, 6 × 5 = 30 and 8 × 5 = 40.
Common mistakes: Adding: 2 + 5 = 7.; Writing the number of jumps in the Total box.
Time for a middle child: about 3 min.

True/False statements: 5 × 4 = 20; 3 × 10 = 40; 6 × 2 = 12; 8 × 5 = 35

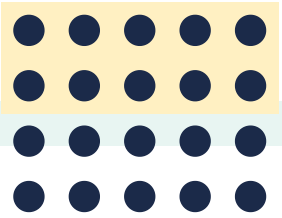

S6 **Read each statement. Decide if it is True or False.**

Answer: True, False, True, False

Hint (say this first): Count the jumps for each fact, or use your 100 square.
Worked solution: 5 × 4 = 20 is true. 3 × 10 is 30, not 40: false. 6 × 2 = 12 is true. 8 × 5 is 40, not 35: false.
Common mistakes: Marking 3 × 10 = 40 as true.; Marking 8 × 5 = 35 as true because it ends in 5.
Time for a middle child: about 2.5 min.

Think harder (page 3): the taught idea in a new setting

T1 **Look at the dots. The top 2 rows are shaded. Fill in the blanks.**

(a) 2 × 5 = ☐☐
(b) 4 × 5 = ☐☐

Answer: 2 × 5 = 10; 4 × 5 = 20

Hint (say this first): The 4 rows are two lots of the 2 shaded rows.
Worked solution: 2 rows of 5 dots is 2 × 5 = 10. All 4 rows are two lots of 10 dots: 10 + 10 = 20, so 4 × 5 = 20.
Common mistakes: Writing 10 for both.; Adding 4 + 5 = 9.
Time for a middle child: about 3.5 min.

T2 **Colour the 2s. Ring the 5s. Then fill in the blanks.**

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40

The numbers in both tables are ☐☐, ☐☐, ☐☐ and ☐☐.

Answer: 10, 20, 30, 40

Hint (say this first): Look for the numbers that are coloured and ringed.
Worked solution: The 2s are 2, 4, 6 ... 40. The 5s are 5, 10, 15 ... 40. The numbers in both are 10, 20, 30 and 40.
Common mistakes: Listing every number in the 5s.; Missing 40.
Time for a middle child: about 4 min.

T3 **Is each number in the 5s table? Circle Yes or No.**

(a) 50
(b) 27
(c) 65

Answer: 50 Yes; 27 No; 65 Yes

Hint (say this first): Look at the last digit. Count in 5s if you are not sure.
Worked solution: 50 ends in 0: yes. 27 ends in 7: no. 65 ends in 5: yes.
Common mistakes: Saying 27 is in the table because it is close to 25.; Saying 65 is not in the table because it is a big number.
Time for a middle child: about 2.5 min.

Go further (page 4): mastery and extension

G1 **Here are the 4s up to 40. Ring each number that is also in the 5s table. Then fill in the blanks.**

4	8	12	16	20	24	28	32	36	40

Numbers in the 4s and the 5s: ☐☐ and ☐☐.

Answer: 20 and 40

Hint (say this first): Check each number in the 4s: does it end in 5 or 0?
Worked solution: The 4s are 4, 8, 12, 16, 20, 24, 28, 32, 36, 40. The ones that end in 5 or 0 are 20 and 40.
Common mistakes: Ringing 16 or 24 (they do not end in 0 or 5).; Ringing only 20.
Time for a middle child: about 4 min.

G2 **Count in 3s up to 30. Fill in the missing numbers. Then find the numbers in both the 3s and the 5s.**

3	6	9	☐☐	15	☐☐	21	☐☐	27	30

(a) The missing numbers are ☐☐, ☐☐ and ☐☐.
(b) In both the 3s and the 5s: ☐☐ and ☐☐.

Answer: 12, 18, 24; 15 and 30

Hint (say this first): Add 3 each time: 3, 6, 9 ...
Worked solution: The 3s are 3, 6, 9, 12, 15, 18, 21, 24, 27, 30. The 5s up to 30 are 5, 10, 15, 20, 25, 30. The numbers in both are 15 and 30.
Common mistakes: Writing 11 or 13 (counting wrongly after 9).; Writing 10 for a number in both tables.
Time for a middle child: about 5 min.

G3 **Ali jumps 5 each time. Mei jumps 4 each time. They both want to reach 40.**

(a) Ali needs ☐ jumps.
(b) Mei needs ☐☐ jumps.
(c) Mei needs ☐ more jumps than Ali.

Answer: Ali 8 jumps, Mei 10 jumps, 2 more

Hint (say this first): How many jumps of 5 land on 40? How many jumps of 4?
Worked solution: 8 jumps of 5 make 40 (8 × 5 = 40). 10 jumps of 4 make 40 (10 × 4 = 40). 10 - 8 = 2 more jumps.
Common mistakes: Guessing the number of jumps of 4 without counting in 4s.; Forgetting to subtract at the end.
Time for a middle child: about 5 min.

Investigation (page 5): Last digits

Easy first step: Write the last digit of each number in the 5s up to 40: 5, 10, 15, 20, 25, 30, 35, 40.
Then: Which of 10, 15, 20 and 25 are in both the 2s and the 5s? Write the last digit of each one you find. Write what you notice.

Model answer: 10 and 20 are in both tables (15 and 25 are only in the 5s). Both end in 0. The 5s end in 5 or 0 and the 2s end in 0, 2, 4, 6 or 8: the only digit in both lists is 0.

Look for: A child who tests several numbers, writes the last digits of both tables and sees that only 0 is in both lists. Credit any clear reason. Do not mark a child down for stopping at a few tests.
Common mistakes: Testing 15 and 25 and thinking they are in the 2s.; Writing only the first digit.

Talk and explain (minutes 70 to 76)

Wei says: a number is in the 5s table if its last digit is 5 or 0. Is Wei right? How could we test it? Sentence starter: I think ... because ...

Model answer: It works for 15 and 40, which end in 5 and 0. The 5s end in 5 and 0 one after the other, so a number ending in anything else, like 28 or 33, is not in the table. We tested a few numbers, and the jumps show why.

Look for: A child who tests more numbers, uses the 100 square or says the last digits alternate. Not just "yes" or "no". Volunteers first, a pass is always fine, never call a child by name to answer, no tallies.

Exit ticket (minutes 76 to 82): 3 questions

E1 **Count in 5s. Fill in the missing numbers.**

5, 10, ☐☐, 20, ☐☐, 30

Answer: 15 and 25

Worked solution: Counting in 5s: 5, 10, 15, 20, 25, 30.
Common mistakes: Writing 11 or 12.; Skipping a number.

E2 **Which sentence is true? Write its number in the bracket.**

Answer: (2) 4 × 10 = 40

Worked solution: 4 × 10 = 40 (4 jumps of 10). 3 × 5 is 15, not 20; 6 × 2 is 12, not 14; 8 × 5 is 40, not 35.
Common mistakes: Choosing 8 × 5 = 35.; Choosing 3 × 5 = 20.

E3 **Ben puts 5 stickers on each of 6 pages. How many stickers does Ben have in all?**

(a) ☐ × ☐ = ☐☐

(b) Ben has ☐☐ stickers in all.

Answer: 6 × 5 = 30 (5 × 6 = 30 is also right); 30 stickers

Worked solution: 6 pages with 5 stickers on each page: 6 jumps of 5 land on 30.
Common mistakes: Writing 6 + 5 = 11.; Writing 6 × 5 = 11.

Look-back (minutes 82 to 85)

Children tick or write: *Something I did well*; *The hardest part was* (counting the jumps; writing the facts; finding the last digits; something else); *What helped me* (the 100 square; a counter as a frog; drawing it; I was not stuck); *Next time I will try* (drawing it; using objects; checking my answer; asking a question); *I am still stuck (my grown-up will photograph this page for my tutor)* and *I would like to pass*. Never collected or read out in front of the group. A child who ticks still stuck gets a check-in in the open session next lesson.

5. Home practice and online practice

#	Tier	Question	Answer
H1	Start here	Count in 2s. Fill in the blanks. 2, 4, 6, [], 10, [2]	8 and 12
H2	Start here	Count in 5s. Fill in the blanks. 5, [2], 15, [2], 25, [2]	10, 20, 30
H3	Start here	A bundle has 10 straws. How many straws are in 3 bundles? 3 × 10 = [2]	30
H4	Think harder	Which numbers up to 20 are in both the 2s and the 5s? Write them. [2] and [2]	10 and 20
H5	Go further	Mei knows that 2 × 7 = 14. What is 4 × 7? [2]	28

Online practice (`out/l16/practice`, key `t2l16`): 13 items; 9 have a template that makes unlimited similar questions with a computed answer. Every template variant is checked by the validator against a brute-force oracle and the runner's own JavaScript. No timers, no scores, no streaks.

6. Parent line for the term report

Your child is learning that a times table is counting in jumps and that the last digits show patterns. This week: the 2s, 5s and 10s, with the 4s and 3s as extras.

Term line (plan, section 5): Your child is learning to draw a story, to use groups and sharing, and to test a claim with an example. Add one named strength and one next step from your own observation. No marks, no ranking, no claim of exam results.

7. Slide list

#	Time	Slide	On screen	Speaker note
1	0–2	**Skip-Count Tables** s-title	TODAY WE WILL: / Build tables by counting in jumps.	Lesson 6 of Term 2, 90 minutes. Objective: build the 5s, 2s and 10s tables by counting in jumps along a 100 square, say and write the facts (6 × 5 = 30), notice the last digits, and use the 2s to find the 4s (doubling, shown once in the Mini-lesson). Plain statement for families: the 2, 5 and 10 tables within 40 are Primary 1 work, but the 3 and 4 tables and numbers that are in two tables go past the school Primary 1 syllabus on purpose. Time plan: opening 0 to 2, warm-up 2 to 8, sneak-peek 8 to 12, explore 12 to 26, mini-lesson 26 to 38, brain break 38 to 42, workbook 42 to 70, talk 70 to 76, exit ticket 76 to 82, look-back 82 to 85, flex time and goodbye 85 to 90 (the buffer: do not start anything new). Think harder, Go further and the Investigation are for every child to choose. Greet by first name, then say the recording notice in one line (you and the screen only; a child may keep the camera off), then start the recording.
2	2–8	**Warm-up: count in jumps** s-rem1	Touch the yellow numbers as we say them / [picture: hundred] / Count in 2s: 2, 4, 6, 8 … / 2s 5s 10s	The yellow numbers are the numbers we say when we count in twos. Count together to 18, touching each yellow number, then count in fives (5, 10, 15) and count in tens together (10, 20, 30, 40). Ask: after 18 in twos (20), after 35 in fives (40). No writing, no marks. A child who is unsure touches each number on the screen.
3	2–8	**Jumps on a number line** s-rem2	[picture: number_line] / Every jump is the same size. / next jump 4 jumps of 5	The frog jumps 5 each time and has made 2 jumps. Ask: where does the next jump land (15), where do 4 jumps of 5 land (20). Children answer aloud or with fingers. A child who is unsure counts the jumps on fingers while saying the numbers.
4	2–8	**5 groups of 6** s-rem3	[picture: groups] / 6 + 6 + 6 + 6 + 6: add one group at a time. / 12 + 6	Five bags with 6 counters in each bag. We add one bag at a time: 6 + 6 = 12, then 12 + 6 = 18, and so on. Say 6 + 6 = 12 yourself, then ask: 12 + 6 (18). Children answer aloud. This is Term 2 Lesson 5 taught again: groups of is repeated addition, and a table is the same idea with the jump size fixed.
5	8–12	**Sneak-peek puzzles** s-sneak	Ideas we have not learnt yet. A guess is a great start. Nobody is marked. / PUZZLE 1: anyone can try: / Jenny puts 5 stickers on each page. / She fills 4 pages. / How many stickers is that altogether? / You may draw or count in 5s. / PUZZLE 2: think: / Ali counts in 2s: 2, 4, 6, 8 and so on up to 20. / Mei counts in 5s: 5, 10, 15, 20. / Which numbers do they both say? / Write them.	Puzzle 1 (4 pages with 5 stickers; 20 stickers) is an access question: any child can draw or count in fives. Puzzle 2 is a thinking question on the lesson idea: numbers in two tables (10 and 20). Say: two sneak-peek puzzles, ideas we have not learnt yet; a guess is a great start and I do not know is welcome; nobody is marked. Children write on their own paper. Nobody holds paper to the camera. There is no private chat. Answers: 20; 10 and 20. Do not reveal puzzle 2 until Talk time. Do not write scores or keep a list.
6	12–26	**Explore: jumps of 5** s-explore1	Put a counter just left of the 1. That is 0. / Jump 5 at a time. Colour each number you land on. / Say it: 1 five is 5, 2 fives is 10, 3 fives is 15 … / How many jumps to land on 30? / [picture: hundred]	Round 1, about 5 minutes. Children use the 100 square on the kit page (page 6) and a counter as a frog. Start on 0: the counter sits just to the left of the 1, off the square. Each jump of 5 lands on 5, 10, 15 … up to 40; children colour each landing square lightly and say 1 five is 5, 2 fives is 10. Fingers count the jumps. Ask: how many jumps to land on 30 (6), on 25 (5), on 40 (8). Then say 6 fives is 30 and write 6 × 5 = 30 on the screen. The picture shows the numbers 1 to 40 with nothing coloured, so children find the landing numbers themselves.

7	12–26	**Jumps of 2 and of 10** s-explore2	Use a different colour for each table. / [picture: hundred] / Jump 2 at a time: how many jumps to land on 12? / Jump 10 at a time: how many jumps to land on 40?	Round 2, about 4 minutes. Children colour the 2s in a second colour and put a ring round the 10s. Ask: how many jumps of 2 to land on 12 (6; 6 twos is 12) and how many jumps of 10 to land on 40 (4; 4 tens is 40). Say each fact with the sign: 6 × 2 = 12, 4 × 10 = 40. A child who loses count uses fingers for the jumps. Do not name a child with a wrong answer.
8	12–26	**What do you notice?** s-explore3	Look at the last digits of the numbers you landed on. / [picture: hundred] / The 5s end in … / The 10s end in … / The 2s end in …	Round 3, about 5 minutes. Ask: look at the last digit of each yellow number (the 5s). What do you notice? (5, 0, 5, 0). The 10s end in 0. The 2s end in 0, 2, 4, 6 or 8. Let children say the pattern themselves. Then ask: is 35 in the 5s? is 28? Children answer with a thumb up or down. The picture here shows the 5s as an example only. Accept any correct pattern a child finds, such as the 5s are every second number of the 10s.
9	26–38	**The 5s table** s-m1	Jumps of 5 | Say it | Write it / 1 jump | 1 five is 5 | 1 × 5 = 5 / 2 jumps | 2 fives is 10 | 2 × 5 = 10 / 3 jumps | 3 fives is 15 | 3 × 5 = 15 / 4 jumps | 4 fives is 20 | 4 × 5 = 20 / 5 jumps | 5 fives is 25 | 5 × 5 = 25 / 6 jumps | 6 fives is 30 | 6 × 5 = 30	A table is a list of jumps. The first number is how many jumps and the second is the size of each jump: 6 × 5 is 6 jumps of 5, which lands on 30. The table stops at 6 fives; 7 × 5 is asked aloud and the answer comes on the next slide. Link back to Term 2 Lesson 5: 6 groups of 5 and 6 jumps of 5 are the same.
10	26–38	**The 5s table** s-m1-ans	Jumps of 5 | Say it | Write it / 1 jump | 1 five is 5 | 1 × 5 = 5 / 2 jumps | 2 fives is 10 | 2 × 5 = 10 / 3 jumps | 3 fives is 15 | 3 × 5 = 15 / 4 jumps | 4 fives is 20 | 4 × 5 = 20 / 5 jumps | 5 fives is 25 | 5 × 5 = 25 / 6 jumps | 6 fives is 30 | 6 × 5 = 30 / 7 fives is 35: 7 × 5 = 35. 8 fives is 40: 8 × 5 = 40.	A table is a list of jumps. The first number is how many jumps and the second is the size of each jump: 6 × 5 is 6 jumps of 5, which lands on 30. The table stops at 6 fives; 7 × 5 is asked aloud and the answer comes on the next slide. Link back to Term 2 Lesson 5: 6 groups of 5 and 6 jumps of 5 are the same. (answer shown after the children have answered)
11	26–38	**The 2s and the 10s** s-m2	The 2s: / 1 × 2 = 2 / 2 × 2 = 4 / 3 × 2 = 6 / The 10s: / 1 × 10 = 10 / 2 × 10 = 20	The 2s are jumps of 2: 2, 4, 6, 8, 10, 12. The 10s are jumps of 10: 10, 20, 30, 40. Say each fact. Ask: what is 4 × 2 (8), what is 3 × 10 (30); the answers come on the next slide. Children who know the facts say them aloud; others look at the card. Note the 10s are every second number of the 5s.
12	26–38	**The 2s and the 10s** s-m2-ans	The 2s: / 1 × 2 = 2 / 2 × 2 = 4 / 3 × 2 = 6 / The 10s: / 1 × 10 = 10 / 2 × 10 = 20 / 4 × 2 = 8 and 3 × 10 = 30. The 2s go on 10, 12 and the 10s go on 40.	The 2s are jumps of 2: 2, 4, 6, 8, 10, 12. The 10s are jumps of 10: 10, 20, 30, 40. Say each fact. Ask: what is 4 × 2 (8), what is 3 × 10 (30); the answers come on the next slide. Children who know the facts say them aloud; others look at the card. Note the 10s are every second number of the 5s. (answer shown after the children have answered)
13	26–38	**Last digits** s-m3	Table | The last digit is / The 5s | 5 or 0 / The 10s | 0 / The 2s | 0, 2, 4, 6 or 8 / A last digit can tell you if a number is in a table.	Last digits make a pattern. The 5s end in 5 or 0; the 10s always end in 0; the 2s end in 0, 2, 4, 6 or 8. Ask: is 35 in the 5s table (yes, it ends in 5)? Is 28 in the 5s table (no, it ends in 8)? Say that the last digit helps us test; a few tests do not prove a rule for every number, but the jumps show why.
14	26–38	**Add or jump?** s-m3b	Sum | What it means | Total / 6 + 5 | 6 and 5 more | 11 / 6 × 5 | 6 jumps of 5 | 30 / The sign tells you what to do.	A common mix-up is 6 + 5 and 6 × 5. 6 + 5 means 6 and 5 more: 11. 6 × 5 means 6 jumps of 5: 30. Ask: what is 4 + 3 and what is 4 × 3 (7 and 12)? Link to the pictures: 4 groups of 3 is 4 × 3.
15	26–38	**Double it** s-m3c	[picture: array] / The top 2 rows are shaded. / What is 2 × 6? What is 4 × 6?	The 4s are the 2s doubled. The top 2 rows are 2 × 6 = 12. All 4 rows are two lots of the shaded rows, so 4 × 6 is 12 + 12 = 24. Ask for 2 × 6 first, then 4 × 6, and let children say the doubling themselves. The answer comes on the next slide. Workbook T1 uses the same idea with new numbers.

16	26–38	**Double it** s-m3c-ans	[picture: array] / The top 2 rows are shaded. / What is 2 × 6? What is 4 × 6? / 2 × 6 = 12. All 4 rows are two lots of the shaded rows, so 4 × 6 is 12 + 12 = 24. Ask for 2 × 6 first, then 4 × 6, and let children say the doubling themselves. The answer comes on the next slide. Workbook T1 uses the same idea with new numbers. (answer shown after the children have answered)
17	26–38	**Your turn** s-m4	Write the fact and the total. / 7 × 2 9 × 2 2 × 10	Each child writes the three totals on their own paper, for example 7 × 2 = 14 (7 jumps of 2). Walk the cameras; do not ask children to hold papers up. Wait 10 seconds before helping. Answers: 14, 18, 20. Children may use the 100 square and a counter.
18	26–38	**Check: the facts** s-m4a	Fact | Jumps | Total / 7 × 2 | 2 + 2 + 2 + 2 + 2 + 2 + 2 | 14 / 9 × 2 | 2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 | 18 / 2 × 10 | 10 + 10 | 20	Answers: 14, 18, 20. Read each answer aloud so a child watching the recording can mark their own work. Children tick their own. Never ask a child to show a wrong answer to the group.
19	38–42	**Whisper and say** s-break	I count from 1. On every fifth number, show 5 fingers and say it. / Then I count to 20. Clap softly on every second number. / Stand up. Sip some water.	Four minutes. Stand up on camera. The tutor counts from 1 to 30 slowly. On every fifth number children show 5 fingers and say the number. Then 1 to 20: children clap softly on every second number. No equipment, no running, a little clear space. A child may stay seated. Do not give prizes or compare children.
20	42–70	**Workbook page 1: Start here** s-ws1	Questions 1 to 3. Take your time. / questions S1, S2, S3	Read questions 1 to 3 aloud. Children work on their own; the tutor walks the cameras and asks how do you know. Wait 10 seconds before helping. After question 3 any child may choose to carry on or try Think harder. Question 1: count in 5s and fill in three missing numbers. Question 2: a frog jumps on a number line. Question 3: 4 bundles of 10 straws.
21	42–70	**Check page 1** s-ws1ans	answers S1, S2, S3	Read each answer aloud. Children tick their own page. Never ask a child to show a wrong answer to the group. Answers: Q1 15, 25, 35; Q2 3 jumps, each jump 5, 3 × 5 = 15; Q3 40 straws.
22	42–70	**Workbook page 2: Start here** s-ws2	Questions 4 to 6. Take your time. / questions S4, S5, S6	Read questions 4 to 6 aloud. Question 4: 6 bikes with 2 wheels each. Question 5: a table of 5s facts with boxes. Question 6: true or false for four facts.
23	42–70	**Check page 2** s-ws2ans	answers S4, S5, S6	Read each answer aloud so a child watching the recording can mark their own work. Never ask a child to show a wrong answer to the group. Answers: Q4 12 and 12 wheels; Q5 10, 20, 30, 40; Q6 true, false, true, false.
24	42–70	**Choose your next page** s-choice	Page | What it is / Think harder (page 3) | The 4s and numbers in two tables / Go further (page 4) | The 4s and 3s, and jumps / Investigation (page 5) | Last digits / Check | Finish and check your own work / Everyone may choose. Not finished? Pages 3 to 5 are for home too.	Invite the whole group at once, for example: when you have finished Start here, you can choose Think harder, Go further or the Investigation. Never announce who is on which page and never name a child. Pairs are not split unless both children agree. Model answers are in the tutor guide. About 5 minutes.
25	70–76	**Talk and explain** s-talk	WEI SAYS: / A number is in the 5s table if its last digit is 5 or 0. / Is Wei right? How could we test it? / I think … because …	One minute of talk to the grown-up next to you, or to your screen. Children test Wei's rule on the 100 square: 15, 40, 28, 33. Then volunteers first; a pass is always fine; never call a child by name to answer. Model answer: it works for the numbers we tested; the 5s alternate between ending in 5 and 0, so a number that ends in 5 or 0 is in the table, and one that ends in anything else is not. Repeat each child's answer in your own words for the recording.
26	70–76	**Back to the sneak-peek** s-sneakans	[picture: hundred] / Yellow: 2s only. Green: 5s only. Border: both. / 10 and 20 are in both. So are 30 and 40.	Reveal puzzle 2 now. Say: many of you wrote a good reason. Do not read out anyone's earlier answer. Ali's twos and Mei's fives meet at 10 and 20 (and later at 30 and 40). The numbers in both tables end in 0. Puzzle 1: 4 pages of 5 stickers is 20.

27	76–82	**Exit ticket** s-exit	On your own. No looking back. / questions E1, E2, E3	Children answer on page 5. Read E1, E2 and E3 aloud (the questions are on the slide). Children tick their own ticket against the next slide. Nobody holds paper to the camera and there is no private chat.
28	76–82	**Check the exit ticket** s-exitans	answers E1, E2, E3	Read each answer aloud. Children tick their own ticket. Answers: 15 and 25; option 2, 4 × 10 = 40; 6 × 5 = 30 and 30 stickers.
29	82–85	**Look-back** s-look	[look-back box]	Three minutes. Children tick or write the look-back box on page 5. A pass is always allowed. It is never marked, never collected in front of the group and never read out. If a child ticks I am still stuck, a grown-up may photograph that page after class and send it to the business WhatsApp (the number is in the parent summary, never on a slide). You then help in the open session next lesson. Never a direct message to a child. The Next time I will try row is optional.
30	85–90	**Well done, inquirers!** s-end	Show a grown-up one thing you found out today. / NEXT LESSON: / Sharing and Grouping / Have ready: next lesson's workbook printed (your tutor sends it ahead), about 20 counters or buttons, 5 plates or cups, pencil and paper.	Say goodbye and thank the grown-ups. Minutes 85 to 90 are flex time: the buffer. If you ran late, finish any open item (the look-back). Do not start anything new. If the whole class is ahead, show the optional slides and use the Spare-time menu from the tutor guide.
31	optional	**Go further: what if?** s-opt	Ben says: every number in the 10s table is also in the 5s table. / Is Ben right? / Try 10, 20, 30 and 40 on your 100 square.	Optional, only if you are on time. Answer: yes. Every jump of 10 is two jumps of 5, so a number in the 10s table is in the 5s table. Children try 10, 20, 30 and 40; say the answers aloud afterwards. Take two answers and move on.
32	optional	**If we have time: pick one** s-menu	Activity | What we do / Is it always true? | Every number in the 10s is in the 5s. Test it. / Make a puzzle | Pick a number to 40. Ask your grown-up: is it in the 5s table? / Teach it back | Show a toy how to find 6 × 5 by jumping / Optional. Everyone may join.	Optional Spare-time menu, used only if the whole class is ahead. Pick one or two activities (3 to 5 minutes each); full tutor lines and answers are in the tutor guide. Never start new content and never name who is ahead. Slow down with how do you know rather than rushing on. These minutes come from the flex buffer and are not part of the 90-minute sum.

8. Recording cues and chapter markers

Say each cue once, to the camera, at the start of the part. Add a chapter marker at each time. A child watching alone cannot ask you a question, so say the page and question number aloud, read each question and each answer aloud, and repeat a child's answer in your own words.

Chapter	Part	You say (recording voice)	A child watching later
0:00	Opening	*If you are watching the recording: hello! Get a pencil, paper, your workbook, coloured pencils and counters. Pause or rewind any time.*	Gather your workbook, pencil, coloured pencils, paper and counters. Press play when ready.
2:00	Remember warm-up	*Recording: join in! Touch the numbers and say your answers before I say them. Pause if you need longer.*	Play along. Say each answer out loud before the video does.
8:00	Sneak-peek puzzles	*Recording: pause now and try both puzzles on your paper. Guessing is fine. Press play for the next part.*	Pause. Try both puzzles on your own paper. A guess is fine.
12:00	Explore	*Recording: pause now. Use your 100 square and a counter to jump in fives, twos and tens. Press play when you have tried.*	Pause. Jump and colour on your 100 square, say each fact, and look at the last digits.
26:00	Mini-lesson	*Recording: keep watching and copy the examples. Rewind if you miss a step.*	Watch and copy the examples. Rewind any step you missed.

38:00	Brain break	*Recording: stand up and join in! Show five fingers and say every fifth number.*	Stand up. Show five fingers and say each fifth number out loud.
42:00	Workbook	*Recording: pause now and do workbook page 1. When you finish a page, press play to check it.*	Pause. Do page 1, then play to check. Then page 2. Then choose a page to try.
70:00	Talk time	*Recording: pause. Tell a grown-up if Wei is right, and test it on your 100 square.*	Pause. Explain your answer to someone at home, and test it on the 100 square.
76:00	Exit ticket	*Recording: pause and do the exit ticket on your own. Then press play to check it.*	Pause. Do the exit ticket alone, then play to check it.
82:00	Look-back	*Recording: pause and fill in your look-back box. You can pass.*	Pause. Fill in the look-back box, or pass.
85:00	Flex time and goodbye	*Recording: well done for finishing! Show a grown-up one thing you found out.*	Show a grown-up your workbook and tell them one thing you found out.

9. Timing check (model, not a stopwatch)

Part	Allocated	Script	Slow class	Flag
opening	2:00	1:31	1:43	ok
remember	6:00	4:50	5:43	ok
sneak	4:00	3:07	3:38	ok
explore	14:00	11:10	13:16	ok
mini	12:00	9:58	11:50	ok
break	4:00	3:14	3:50	ok
work	28:00	22:42	27:03	ok
talk	6:00	4:54	5:49	ok
exit	6:00	4:39	5:29	ok
look	3:00	2:23	2:48	ok
flex	5:00	0:48	0:55	ok
Total	90:00	69:15	82:05	

Assumptions as docs/audit/timing_p1.md: speech 120 words a minute, read-aloud 110, slide change 25 s, a group question 10 s thinking plus 20 s answers, papers to the camera 30 s. Workbook: Start here has 6 questions; a middle child needs about 8.0 min for page 1 and 8.5 min for page 2 (a slower child about 1.7 times as long, so may finish page 1 and part of page 2; that is fine, the check-together slides cover every answer). The lesson has no breakout rooms, so no breakout time is counted.
