

LEVEL 1 • TERM 2 • LESSON 6 • FOR PARENTS

6 Skip-Count Tables

WHAT WE DID

We built the 5s, 2s and 10s tables by counting in jumps along a 100 square and wrote the facts, such as 6 × 5 = 30. We looked at the last digits: the 5s end in 5 or 0, the 10s end in 0. The 2, 5 and 10 tables within 40 are Primary 1 work. The 4s (the 2s doubled), the 3s and numbers that are in two tables go past the school Primary 1 syllabus on purpose, always with the 100 square and counters.

> **A table is counting in jumps, and the last digits show a pattern.**

TRY AT HOME (5 MINUTES)

1. Jumps: count in 5s to 40 on the 100 square page. Colour each landing number. How many jumps to 30?
2. Detective: is 35 in the 5s table? Is 28? Ask your child how they know (look at the last digit).
3. Double it: if 2 × 6 = 12, what is 4 × 6? Show it with 24 counters in rows.

When your child is stuck

Let your child count the jumps on fingers or move a counter along the 100 square, and wait 10 seconds before helping. Asking ‘what is the next number?’ works better than giving the answer. If the look-back page says ‘I am still stuck’, photograph it and send it to our business WhatsApp (+65 9880 5962). Photos are kept 90 days after the program ends.

Words we used

- table: counting in jumps of the same size
- 6 × 5: 6 jumps of 5, which lands on 30
- last digit: the ones digit of a number
- in both tables: a number we say in two different counts

Good questions

- How many jumps? What size is each jump?
- How do you know it is in the table?

Have ready for next lesson

- About 20 counters or buttons (not food)
- 5 plates or cups (paper plates are fine)
- Pencil, rubber and paper
