TUTOR KEY • LEVEL 1 • TERM 1 • END-OF-TERM CHECK

Term 1 end-of-term check

8 questions, one from each lesson of the term, all at Start here level, plus one optional Think harder item. 20 minutes on private paper. No ranking, no score shown to the group, progress words only. For the tutor: do not hand this key to families.

Where it sits. Lesson 10 (the last lesson of the term), minutes 63 to 83, the part End-of-term check; or at the make-up slot. Plan, section 5, and the owner decisions of 22 Oct 2026: the check takes 20 minutes, is privately returned, shows no ranking and no score to the group, and gives a parent report line per term. It is cut to 8 short questions and one optional Think harder item so that it fits 20 minutes by real timing: Lessons 2 and 4 share question 2 and Lessons 6 and 7 share question 5, so every lesson of the term is still checked. All items are Start here level. A middle child needs about 16 minutes of reading aloud and quiet work; a slower child may use the 5 flex minutes at the end.

1. The questions at a glance

Q	Lesson	Strand (tutor label)	What it checks (Start here level)	Answer
1	L1	Whole Numbers	Tens and ones: read a picture of sticks in tens and ones	**3 tens and 9 ones; 39 sticks**
2	L2	Whole Numbers	Number line (the number the arrow shows) and counting on in tens (Lessons 2 and 4)	**67; 44**
3	L3	Whole Numbers	Make the greatest number from two cards	**83**
4	L5	Addition and Subtraction	Add by making a ten, then with a tens number	**12; 42**
5	L6	Addition and Subtraction	Jump in tens (52 + 30) and take away tens and ones (74 - 31) (Lessons 6 and 7)	**82; 43**
6	L8	Addition and Subtraction	Equals as a balance: a box number	**6; 20**
7	L9	Length; Addition and Subtraction in context	Draw a line of a given length, then find a length 4 cm longer	**a line 6 cm long; 10 cm**
8	L10	Length; Addition and Subtraction in context	A two-step story, one operation per step	**35 + 10 = 45; 45 - 3 = 42 (Mei has 42 stickers)**
Think harder	L10	Length; Addition and Subtraction in context	Reading trap: who is in the group (optional, never scored)	**9 children (5 + 3 + 1, counting Ali)**

The strand labels are for the tutor only and must not appear on any child or parent page. Each question is a fresh example of the Start here idea of its lesson (numbers chosen so that they do not repeat a lesson page), so a child who understood the lesson can answer it. Before first use, a tutor should read each question against what the lesson actually taught.

2. Giving it: before and during

1. A week before: send the grown-up note (L10_Check_Parent_Note.pdf) and the check sheet with the lesson materials. Families print the sheet at 100%, fold it or put it in an envelope, and keep it closed. A family with no printer tells you: arrange another way (for example the make-up slot).
2. Tell the group in the opening and at s-check1: the check is on your own paper, takes about 20 minutes, is not a race, may be skipped in part, and nothing is shown to the group.
3. Start at minute 63 and finish by minute 83. Children open the sheet only when you say. The paper lies flat on the table and is never held up. A grown-up sits nearby and may read a question again, but gives no help with answers. Cameras may be on or off.
4. Read each page aloud, one question at a time. Then leave quiet work time: about 2 minutes for page 1, 3 for page 2, 4 for page 3 and 3.5 for page 4. Say nothing about right or wrong, and read no answers. A middle child needs about 16 minutes in all; a slower child may use the 5 flex minutes.
5. Allowed: fingers, counters, the kit squares and the ruler for question 7. Not allowed: a calculator, a grown-up giving answers, looking at the workbook. A child who finishes early turns the sheet over and draws quietly.

6. After page 2, take a one-minute stretch (stand, shake out, sip water). After page 4, say Pencils down (slide s-check2). Do not collect or look at any sheet. A child still writing may use the flex minutes at the end; nothing new is started there.

3. Returning it privately: after the lesson

1. Same day: the grown-up takes ONE clear photo of each of the 4 pages (page flat, taken straight from above, the whole page in view including the 10 cm bar on page 4, and the name on each page) and sends them to the program's business WhatsApp, +65 9880 5962, and to no other number. Never to a child, never to a personal phone, never into the class chat.
2. Within 3 days: the tutor marks from the photos with the key below, opening them only on the program's business WhatsApp (never on a personal phone), and records the result on the tutor record sheet (tutor only). For question 7, the ruler question (the grey note under the answer key says question 9 and 57% to 63%: it means this question), measure the drawn line against the 10 cm bar on page 4 and accept 5.5 to 6.5 cm; if the photo is not clear, count it right when the answer to part (b) is right. Nothing is written on the child's paper and no mark or score goes back to the child or the group.
3. The tutor chooses a progress word for each of the three areas from the bands below and writes the parent note from the templates: the term line, three area lines, one named strength and one next step. Sent only to the parent. No marks, no x out of 10, no ranking, no comparison with other children, no prediction.
4. Once the note is sent, save the photos to the program's private file store and delete them from the business WhatsApp chat. The program keeps the photos for 90 days after the program ends, then deletes them, as the privacy notice says. Delete the record sheet when the note is sent (keep only the note in the family file). Never forward the photos or save them to a personal phone or any other device.
5. At the start of Term 2 say to the whole group: thank you for taking the check; there is nothing to share and nothing to fear. Never name a child or an answer.

Privacy checklist

- Sheets are never held up to the camera and never read out.
- No answer is said aloud during or after the check.
- The tutor never marks in front of the group and never says who finished first or last.
- Photos come to the program's business WhatsApp (+65 9880 5962) only; tutors never use a personal phone; photos are kept 90 days after the program ends, then deleted; the note goes to the parent only; no private message to any child.
- No score, no x out of 10, no ranking, no tally, no comparison between children.
- The recording captures the tutor, the shared screen and any voice that is not muted; pause it during silent work if the platform allows. The WhatsApp number is never on a slide.

Absent, late joiners, families who prefer not to, upset children

- A child who was away or whose family prefers another time: take the check at the make-up slot (a small group, a parent beside the child on camera). The tutor never sits alone with one child on a private call.
- A child who joined late: the family may choose to leave out questions for lessons the child did not attend. Mark those questions not taught; they are left out of the strand score, and a strand with no question taught gets no line.
- A family that does not want the check: no problem. The child does the Lesson 10 work as usual and the report line uses the tutor's own notes only.
- A child who is upset or stuck: remind the group (open session) that every question can be skipped. Do not single the child out. The grown-up may stop the check at any time.
- A family with no printer: tell the family to say so a week before and arrange another way (for example the make-up slot with the sheet sent to the family another way). Never ask a child about it in front of the group.

4. Answer key and marking

Mark each question R (right), P (partly right), N (not yet) or T (not taught: the child did not attend that lesson). Mark on the tutor record sheet only, never on the child's paper. A child may write steps in any clear layout. Do not mark neatness or spelling.

Q1 (L1) Count the sticks. Fill in the blanks.

Answer: 3 tens and 9 ones; 39 sticks

(a) __ tens and __ ones = 3 tens and 9 ones; (b) There are __ sticks altogether. = 39

R: 3, 9 and 39 all correct. **P:** Two of the three correct (for example 39 but the tens and ones swapped).

Worked: 3 bundles of ten is 30, and 9 singles makes 39.

Watch for: 39 written as 93.; Counting each bundle as one stick (3 + 9 = 12).

Q2 (L2) Fill in the blanks.

Answer: 67; 44

(a) Look at the number line. The arrow is pointing to __. = 67; (b) Counting in 10s: 14, 24, 34, __ = 44

R: Both correct. **P:** One of the two correct.

Worked: The arrow is just after 66 and just before 68, so it points to 67. In 10s: 14, 24, 34, 44 (the tens digit goes up by 1 and the ones digit stays 4).

Watch for: (a) 66 or 68 (the neighbour).; (b) 35 (counting in ones) or 54 (jumping twice).

Q3 (L3) Look at the two cards. Use both cards to make the greatest number you can.

Answer: 83

The greatest number is __. = 83

R: 83. **P:** 38 written (the other number made from the cards).

Worked: Two numbers can be made: 38 and 83. 83 has 8 tens and 38 has 3 tens, so 83 is the greatest.

Watch for: 38 (the smaller number).; 11 (adding the cards).

Q4 (L5) Look at the ten frames. Fill in the missing numbers.

Answer: 12; 42

(a) 7 + 5 = [ ] = 12; (b) 37 + 5 = [ ] = 42

R: Both correct. **P:** One of the two correct.

Worked: 7 + 3 = 10, and 2 more makes 12. 37 + 3 = 40, and 2 more makes 42.

Watch for: (b) 32 or 312 (joining digits or forgetting the tens).; (a) 11 or 13 from a counting slip.

Q5 (L6) Add or subtract.

Answer: 82; 43

(a) 52 + 30 = __ = 82; (b) 74 - 31 = __ = 43

R: Both correct. **P:** One correct.

Worked: (a) 3 tens more than 52 is 82. (b) 74 - 30 = 44, then 44 - 1 = 43.

Watch for: (a) 55 (adding 3 to the ones) or 522.; (b) 33 (taking away 41) or 44 (taking only the tens).

Q6 (L8) Fill in the missing number.

Answer: 6; 20

(a) 8 + 4 = 6 + [ ] = 6; (b) 60 + 10 = 50 + [ ] = 20

R: Both correct. **P:** One correct.

Worked: (a) 8 + 4 = 12, and 12 is 6 + 6, so the box is 6. (b) 60 + 10 = 70, and 70 is 50 + 20, so the box is 20. Both sides must have the same total.

Watch for: (a) 12 (writing the total of the left side).; (b) 70 (the total instead of the missing number).

Q7 (L9) Use your ruler.

Answer: a line 6 cm long; 10 cm

(a) Draw a line 6 cm long. Start at the dot. = A line from the dot, 6 cm long (5.7 to 6.3 cm); (b) A line 4 cm longer than your line is __ cm long. = 10

R: The line is about 6 cm (5.7 to 6.3 cm; accept 5.5 to 6.5 cm if the photo is not clear) and 10 is written. **P:** Only the line about right, or only the 10 written (a line within 0.5 cm of 6 cm counts if the photo is not clear).

Worked: Put the 0 mark of the ruler on the dot and draw to the 6 mark. A line 4 cm longer is 6 + 4 = 10 cm.

Watch for: Starting the line at 1 on the ruler (a 5 cm line).; (b) 4 (the extra only) or 6.

Q8 (L10) Mei has 35 stickers. Ali gives her 10 more stickers. Then she gives 3 stickers to Ben. Write one number sentence for each step. The last number you write is how many stickers Mei has now.

Answer: 35 + 10 = 45; 45 - 3 = 42 (Mei has 42 stickers)

(a) Step 1: .... = 35 + 10 = 45; (b) Step 2: .... = 45 - 3 = 42

R: Both step sentences have the right operation and numbers (any clear layout) and the second ends with 42. **P:** One correct step sentence, or both sentences right with one slip in the arithmetic, or only the answer 42 without steps.

Worked: Step 1: she gets 10 more, so add: 35 + 10 = 45. Step 2: she gives 3 away, so take away: 45 - 3 = 42.

Watch for: 32 (taking the 10 away from 35 and adding 3 or similar).; 48 (adding both numbers).; Using 35 again in Step 2.

Optional Think harder item (L10) Ali is in a line. There are 5 children in front of him and 3 children behind him. How many children are in the line?

Answer: 9 children (5 + 3 + 1, counting Ali)

There are __ children in the line. = 9

R: The answer is right. **P:** -

Worked: 5 in front and 3 behind makes 8, and Ali is in the line as well: 8 + 1 = 9.

Watch for: 8 (leaving Ali out).

Question 9, part (a): in the photo the page is flat, so measure the drawn line against the 10 cm print-check bar on the same page (the line should be 57% to 63% of the bar). If the photo is not clear enough to tell, ask the grown-up (not the child) for a clearer photo, or count the line as right if the child's answer to part (b) is right. Never ask a child to show the line to the camera.

5. Tutor record sheet (tutor only; one per child; delete after the note is sent)

Child (first name only): ..... Date taken: .....

Q1 L1	Q2 L2	Q3 L3	Q4 L5	Q5 L6	Q6 L8	Q7 L9	Q8 L10	Think harder		

Write R, P, N or T in each box. R = 1 point, P = 0.5, N = 0, T = left out. Then work out each strand score and choose a word from the table.

Strand (parent name)	Questions	Points / counted	Word
Numbers, tens and ones	Q1, Q2, Q3		☐ Showing this often ☐ Getting there ☐ Just beginning
Adding and taking away	Q4, Q5, Q6		☐ Showing this often ☐ Getting there ☐ Just beginning
Measuring length and solving stories	Q7, Q8		☐ Showing this often ☐ Getting there ☐ Just beginning

Progress words: how a score becomes a word

Each question counts 1 if right, 0.5 if partly right, 0 if not yet, and is left out if not taught. Strand score = points / questions counted. The word depends only on the child's own answers, never on other children.

Questions counted in the strand	Showing this often	Getting there	Just beginning
4	3 to 4 points	1.5 to 2.5 points	0 to 1 point
3	2.5 to 3 points	1.5 to 2 points	0 to 1 point
2	1.5 to 2 points	1 point	0 to 0.5 point
1	1 point (right)	0.5 point (partly right)	0 points (not yet)

If no question in a strand was taught to the child, write no line for that strand. Strand lines say what the child did and what helps next, never a grade. The optional Think harder question is never scored; add the optional line if the child tried it (right or not), and leave it out if the child skipped it.

6. Parent report line templates (copy into the note to the parent)

Term 1 progress note for [Name]
Your child is learning to see numbers as tens and ones and to solve problems one step at a time.

Area (parent wording)	Showing this often	Getting there	Just beginning
Numbers, tens and ones Lessons 1 to 4. We looked at reading and writing numbers to 100 as tens and ones, number lines, comparing numbers and counting in tens.	[Name] is showing this often: reading numbers as tens and ones, finding numbers on a number line, making the greatest number from two cards and counting on in tens.	[Name] is getting there with numbers as tens and ones, number lines, comparing numbers and counting on in tens. A few more rounds with real things will help.	[Name] is just beginning with seeing numbers as tens and ones. Bundling real things in tens, and counting in tens together, are good next steps.
Adding and taking away Lessons 5 to 8. We looked at adding by making a ten, jumping in tens, taking away tens and ones, and using = as a balance.	[Name] is showing this often: adding by making a ten, jumping in tens, taking away tens and ones, and using the equals sign as a balance.	[Name] is getting there with adding by making a ten, jumping in tens, taking away and using the equals sign as a balance. Counters and a number line will help.	[Name] is just beginning with adding and taking away within 100. Counters, a number line and small steps (add 10, take away 10) are good next steps.
Measuring length and solving stories Lessons 9 to 10. We looked at drawing and reading lengths in centimetres with a ruler, and reading a story twice and writing one step at a time.	[Name] is showing this often: using a ruler from the 0 mark, and reading a story twice and writing one number sentence for each step.	[Name] is getting there with using a ruler from the 0 mark and with writing one step at a time in a story. Measuring things at home and acting stories out with counters will help.	[Name] is just beginning with using a ruler and with story steps. Measuring things at home from the 0 mark, and acting out two-step stories with counters, are good next steps.

Then add (from your own notes):
One thing [Name] did well this term: [the tutor adds one named strength from their own notes, for example: explained why 62 is greater than 26 using bundles of ten].
One next step: [the tutor adds one next step, for example: act out two-step stories with counters at home].
[Name] also tried the optional Think harder question. (Add this line if the child tried it, whether or not the answer was right; leave it out if the child skipped it.)
This note is about [Name]'s own learning this term. It is not a mark and it does not compare children.

A filled example (fictional child, Mei)

Term 1 progress note for Mei
Your child is learning to see numbers as tens and ones and to solve problems one step at a time.
Numbers, tens and ones: Showing this often. Mei is showing this often: reading numbers as tens and ones, finding numbers on a number line, making the greatest number from two cards and counting on in tens.
Adding and taking away: Getting there. Mei is getting there with adding by making a ten, jumping in tens, taking away and using the equals sign as a balance. Counters and a number line will help.
Measuring length and solving stories: Getting there. Mei is getting there with using a ruler from the 0 mark and with writing one step at a time in a story. Measuring things at home and acting stories out with counters will help.
One thing Mei did well this term: she explained why 62 is greater than 26 using bundles of ten.
One next step: act out two-step stories with counters at home.
This note is about Mei's own learning this term. It is not a mark and it does not compare children.

Words to avoid in the note: score, mark, out of, rank, top, below average, behind, ahead of, pass, fail, predicted, ready for. No claim about exams, GEP or any contest. No mention of other children. The note goes to the parent only.
