

LEVEL 1 • TERM 3 • LESSON 8 • FOR PARENTS

8 Make a Table

WHAT WE DID

We built triangles and squares in a row with paper strips and counted the sticks. Your child put the numbers in a table, saw that they grow by the same number each time, and used the table to find numbers further along. Completing a table of equal groups is Primary 1 work. Finding the 10th, 20th and 100th picture of a growing stick pattern, and working back from a total number of sticks, go past the school Primary 1 syllabus on purpose.

> **A table shows how the numbers grow. Then we can go on without drawing.**

TRY AT HOME (5 MINUTES)

1. Make a table: 1 cup, 2 cups, 3 cups of water, with spoons of sugar for each. Ask: what is the next number?
2. Stick game: build triangles in a row with 14 paper strips or straws, never matches or toothpicks.
3. Ask: how do you know? How many more each time?

When your child is stuck

Let your child use the strips and wait 10 seconds before helping. Asking "how many more sticks did the last triangle need?" works better than giving the number. Please do not teach letters for a rule: we say it in words. If the look-back page says "I am still stuck", photograph it and send it to our business WhatsApp (+65 9880 5962). Photos are kept 90 days after the program ends.

Words we used

- table: numbers in rows, to see how they grow
- picture: one step of the pattern, such as 2 triangles
- more each time: what we add to go to the next picture
- rule: what the table does, said in words

Good questions

- How many more each time?
- Why not the first number again?
- Can you find the next number without drawing?

Have ready for next lesson

- Your Term 3 book (Book 6): tear out the mistake-card page along the dashed line, then a grown-up cuts out the 8 cards (the mat is not cut)
- Keep the paper strips in their envelope
- A pencil, a rubber and paper
