

LEVEL 1 • TERM 1 • LESSON 6 • FOR PARENTS

6 Tens Jump, Ones Hop

WHAT WE DID

We added and took away tens and ones in our heads. A jump of ten changes only the tens digit. A hop of one changes only the ones digit. For 34 + 25, jump the tens, then hop the ones.

> **Add and take away tens without carrying.**

TRY AT HOME (5 MINUTES)

1. Jump and hop: pick a number up to 60, such as a door or page number. Ask: what is 10 more? 20 more? 3 more? Let your child build it with bars and squares if they want.
2. Number path: draw a line on paper with a mark every 10. Put a coin on a number and jump it in tens. Ask which digit changes and which stays the same.
3. Silly mistake: say 34 + 20 = 36 on purpose and let your child find what went wrong.

When your child is stuck

Please let your child use the bars and squares or draw the jumps, and wait 10 seconds before helping. Asking what could you try? works better than giving the answer.

Words we used

- jump: add or take away tens (10, 20, 30 ...)
- hop: add or take away ones (1, 2, 3 ...)
- tens digit: the left digit, it counts the tens
- ones digit: the right digit, it counts the ones

Good questions

- Is that a jump or a hop?
- Which digit changes?
- What do you land on after the jump?

Things to have ready

- The tens bars and ones squares from the kit page (workbook page 6), cut out by a grown-up. They are the same kit as Lesson 1, so keep them in an envelope.
- About 30 small things such as pasta, buttons or paper clips (only for the home practice; optional in the lesson)
- The printed workbook (pages 1 to 5) and the kit page

Next lesson

Lesson 7: Take Away, Count Up. Your child needs the kit, a pencil and paper. Missed a lesson? Every lesson is recorded; your tutor will share a private link with enrolled families.
