

LEVEL 1 • TERM 2 • LESSON 3 • FOR PARENTS

3 Doubles and Near Doubles

WHAT WE DID

We learned doubles (two of the same number, like 6 + 6 = 12) and used them to add numbers that are next to each other (6 + 7 is double 6 and 1 more). We also doubled tens (30 + 30). Doubles to 20 and a double with 1 more or 1 less are close to school Primary 1 work. Doubling a number like 35 and adding five almost-equal numbers go beyond school on purpose, in Go further only.

> **Double, then adjust: find the double, then move one.**

TRY AT HOME (5 MINUTES)

1. Two plates: put 6 buttons on each. Say: double 6 is 12. Take 1 button away: how many now? Keep small things away from mouths.
2. Double it: say a number from 1 to 10. Your child says the double. Then try 20 and 30.
3. Near double: say 7 + 8. Ask which double helps. Then try 6 + 7 and 9 + 10.

When your child is stuck

Let your child use counters or a drawing, and wait 10 seconds before helping. Asking 'what is double the smaller number?' works better than giving the answer. If the look-back page says 'I am still stuck', photograph it and send it to our business WhatsApp (+65 9880 5962). Photos are kept 90 days after the program ends.

Words we used

- double: two of the same number added (double 6 is 6 + 6)
- near double: two numbers next to each other (6 + 7)
- one more, one less: the number just after or before
- total: the answer when we add

Good questions

- Which double helps here?
- Is the total 1 more or 1 less than the double? How do you know?
- Are the two numbers next to each other?

Have ready for next lesson

- 20 counters or small things of one kind (this lesson's counters are fine)
- The Lesson 14 workbook, with its number cards cut out
- Pencil, rubber and paper

Next lesson

Lesson 14: Odd + Odd: Always, Sometimes, Never. Online practice: your tutor will share the practice link. Missed a lesson? Every lesson is recorded; your tutor will share a private link with enrolled families.
