

4 Odd + Odd: Always, Sometimes, Never

WHAT WE DID

We learned odd and even numbers: pairs with none left over are even, and one left over is odd. Then we were detectives: we tested claims like 'odd + odd is odd' with sums, and found that one test can show a claim is false, but a picture of pairs is needed to see why a claim is always true. Odd and even numbers are Primary 2 work at school, so this whole lesson goes beyond Primary 1 on purpose, always with counters.

> **One test is not a proof: test more, and draw why.**

TRY AT HOME (5 MINUTES)

1. Pairs: put 9 buttons in pairs. Is one left over? Try 10, then 13. Keep small things away from mouths.
2. Detective: ask your child to add two odd numbers, such as 5 + 7. Is the total odd or even? Try three more pairs.
3. Why? Ask: can you draw the pairs to show why? Swap and make a mistake on purpose for them to find.

When your child is stuck

Let your child use counters or draw dots in pairs, and wait 10 seconds before helping. Asking 'is one left over?' works better than giving the answer. If the look-back page says 'I am still stuck', photograph it and send it to our business WhatsApp (+65 9880 5962). Photos are kept 90 days after the program ends.

Words we used

- even: makes pairs with none left over (ends in 0, 2, 4, 6 or 8)
- odd: one left over (ends in 1, 3, 5, 7 or 9)
- claim: something we say is true, and then test
- always, sometimes, never: how often a claim is true

Good questions

- Is one left over when you make pairs?
- Is one test enough? What could we test next?
- Always, sometimes or never? How do you know?

Have ready for next lesson

- 4 plates or bowls (paper plates are fine)
- About 20 small things of one kind (counters, buttons, pasta)
- Pencil, rubber and paper

Next lesson

Lesson 15: Equal Groups. Online practice: your tutor will share the practice link. Missed a lesson? Every lesson is recorded; your tutor will share a private link with enrolled families.

Your child is learning to draw a story, to use groups and sharing, and to test a claim with an example. We share what we see in your child's thinking, never a rank or a mark compared with other children. Math Inquirers by Preciouslyours Pte Ltd.
