

LEVEL 1 • TERM 1 • LESSON 3 • FOR PARENTS

3 Digit Cards

WHAT WE DID

The order of the digits changes a number: the cards 3 and 5 make 35 and 53. Your child compared numbers tens first and made the greatest and smallest numbers from two cards, even with a 0 card. Comparing two-digit numbers is Primary 1 work. Using three cards, and listing every number, goes further and is in Think harder and Go further.

> **The order of the digits changes the number. The left digit counts the tens, so we look at it first.**

TRY AT HOME (5 MINUTES)

1. Card game: write digit cards 0 to 9 on scrap paper. Each of you picks two cards and makes the greatest number you can. Who made the greater number? Say why. Keep small things away from mouths and little ones.
2. Swap it: pick two cards, read the number, swap the cards and read again. Ask: which is greater, and how do you know?
3. Spot it: look at house numbers or lift floors. Ask: which has more tens? Which digit tells you?

When your child is stuck

Please let your child build both numbers with the tens bars and ones squares, or draw them, and wait 10 seconds before helping. Asking 'what could you try?' works better than giving the answer. Please do not hurry. If the look-back page says 'I am still stuck', photograph it and send it to our business WhatsApp (+65 9880 5962). Photos are kept 90 days.

Words we used

- digit: one of the symbols 0 to 9
- tens digit: the left digit, it counts the tens
- ones digit: the right digit, it counts the ones
- compare: say which number is greater or smaller, or if they are the same

Good questions

- How do you know?
- Which digit do we look at first?
- Can the 0 go on the left? Why not?

Have ready for next lesson

- The printed 100 square (workbook page 6, no cutting)
- About 12 small counters (buttons or coins) and 2 or 3 colours
- Pencil, rubber and paper
