

LEVEL 1 • TERM 1 • LESSON 4 • FOR PARENTS

4 The 100 Square Explorer

WHAT WE DID

We explored the 100 square. Your child counted in 10s, 5s and 2s with counters and saw the patterns: counting in tens makes one column, fives make two columns, twos make stripes. We also found that going right adds 1 and going down one row adds 10.

> **Going across a row adds 1. Going down a row adds 10.**

TRY AT HOME (5 MINUTES)

1. Counters on the square: say 5, 10, 15 and let your child cover each number. Swap and make a mistake on purpose for them to find.
2. Move it: put a counter on any number. Call moves such as down 2 rows, right 3. Ask what number it is on now, and how they know.
3. Look for rows: a calendar has rows of 7. Ask what the date straight below adds, and why.

When your child is stuck

Please let your child use the printed square and counters, and wait 10 seconds before helping. Asking what could you try? works better than giving the answer.

Words we used

- row: a line of 10 numbers going across
- column: a line of numbers going down
- ten more: one row down on the 100 square
- last digit: the ones digit, which tells us the list a number is in

Good questions

- How do you know?
- What pattern do you see?
- What would the next number be, and why?

Things to have ready

- The kit page: a printed 100 square (page 6 of the workbook). No cutting is needed.
- About 12 small counters of one kind: buttons, coins, dried beans, paper clips or small pieces of paper
- Two or three colours (pencils or crayons). With only one colour, use dots and crosses

Next lesson

Lesson 5 is about adding numbers by making tens. Your child needs a pencil and paper only. Missed a lesson? Every lesson is recorded; your tutor will share a private link with enrolled families.
