Digit Cards: practice at home

Name _____ Date _____

About 15 minutes, a few days after the lesson. Use your digit cards or draw bars and squares. A grown-up may read the questions aloud. Wrong answers are fine: they show what to try next.

No.1

Start here

You have the digit cards 4 and 7. Write the two numbers you can make. Which one is bigger?

No.2

Start here

Write these numbers in order. Start with the smallest: 72, 27, 70, 17.

No.3

Start here

Ben says 38 is bigger than 41, because 8 is more than 1. Is he right? Say why.

No.4

Think harder

You have the cards 0, 6 and 9. Use two cards. What is the smallest two-digit number you can make? And the biggest?

No.5

Go further

At home: make digit cards 1, 2, 3, 4 and 5. How many different two-digit numbers can you make with two different cards? Write them in order, smallest first.

Answers for grown-ups

Please let your child try first, then check together. Ask *how do you know?* If your child is stuck, wait 10 seconds, then suggest drawing it.

1. 47 and 74. 74 is bigger.
With 4 on the left the number is 47. With 7 on the left the number is 74. 7 tens is more than 4 tens, so 74 is bigger.

2. 17, 27, 70, 72
Look at the tens first: 17 has 1 ten, 27 has 2 tens, 70 and 72 have 7 tens. 70 has no ones, so it comes before 72.

3. No. 41 is bigger, because 4 tens is more than 3 tens.
41 has 4 tens and 38 has 3 tens. Look at the tens first. The ones digit only decides when the tens are the same.

4. 60 and 96
The 0 can not go on the left. The numbers are 60, 69, 90 and 96. The smallest is 60 and the biggest is 96.

5. 20 numbers: 12, 13, 14, 15, 21, 23, 24, 25, 31, 32, 34, 35, 41, 42, 43, 45, 51, 52, 53, 54
5 choices for the tens card and 4 choices left for the ones card: 5 x 4 = 20. List them with 1 on the left, then 2, then 3, then 4, then 5.
