

LEVEL 1 • TERM 1 • LESSON 9 • FOR PARENTS

9 Draw and Measure

WHAT WE DID

We learned to use a ruler properly. Your child measured things from home, drew lines up to 12 cm and compared lengths. The big idea: start at the 0 mark, read the mark at the other end, and when the end falls between two marks choose the closer one. We also met a line that starts at a different mark.

> **Start at the 0 mark. Read the mark at the other end. Between two marks? Choose the closer one.**

TRY AT HOME (5 MINUTES)

1. Measure it: find 5 things. Your child guesses each length, then measures to the nearest centimetre. Put them in order, shortest first.
2. Draw it: say a length such as 9 cm and let your child draw it. Swap: you draw, your child measures. Start at the edge of the ruler on purpose, so your child can spot it.
3. Spot it: look at a tape measure or a growth chart. Ask: where is the 0? How many centimetres from here to there?

When your child is stuck

Let your child slide a finger along the ruler and count the jumps aloud. Wait 10 seconds before helping. Asking "where is your 0?" works better than giving the answer.

Words we used

- centimetre (cm): the gap between two marks
- 0 mark: where we start measuring
- nearest centimetre: the closer mark
- path: straight pieces joined at corners

Good questions

- Where did you start? Why?
- How do you know?
- What if the end is between two marks?

Things to have ready

- A ruler with cm marks, starting at 0 (15 or 30 cm)
- 3 or 4 things to measure; 10 paper clips (or small same-size things)
- Workbook pages 1 to 5 (A4; page 6 is not used), a pencil, a rubber, spare paper
