TUTOR KEY • LEVEL 1 • TERM 1 • END-OF-TERM CHECK

Term 1 end-of-term check

10 questions, one from each lesson of the term, all at Start here level, plus one optional Think harder item. About 30 minutes on private paper. No ranking, no score shown to the group, progress words only. For the tutor: do not hand this key to families.

Where it sits. Lesson 10 (the last lesson of the term), minutes 54 to 83 inside the part Exit ticket and end-of-term check; or at the make-up slot. Plan, section 5: about 20 to 30 minutes, 10 questions, one per lesson, privately returned, no ranking, no score shown to the group, parent report line per term. Owner brief for this build: Lessons 1 to 9 fairly (one question each) plus one story question; all at Start here level, with one clearly marked optional Think harder item. The plan's mix of 4 Start here, 4 Think harder and 2 Go further is replaced by 10 Start here questions and one optional Think harder item: the owner decides if the mix returns.

1. The ten questions at a glance

Q	Lesson	Strand (tutor label)	What it checks (Start here level)	Answer
1	L1	Whole Numbers	Tens and ones: read a picture of sticks in tens and ones	**4 tens and 7 ones; 47 sticks**
2	L2	Whole Numbers	Number line to 100, the number just before, a number word in digits	**67; 79; 53**
3	L3	Whole Numbers	Make two numbers from two cards and say which is greater	**38 and 83; the greater is 83**
4	L4	Whole Numbers	Counting patterns in 5s and 2s, and what we see in the last digit	**30, 35; 28, 30; 0**
5	L5	Addition and Subtraction	Add by making a ten, then with a tens number	**12; 42**
6	L6	Addition and Subtraction	Add and take away tens (jumps of ten)	**62; 82; 32**
7	L7	Addition and Subtraction	Take away tens and ones without renaming	**45; 62**
8	L8	Addition and Subtraction	Equals as a balance: a box number	**29; 8**
9	L9	Length	Draw a line of a given length and measure a printed line to the nearest centimetre	**a line 6 cm long; 9 cm**
10	L10	Addition and Subtraction in context	A two-step story, one operation per step	**35 + 10 = 45; 45 - 3 = 42; Mei has 42 stickers**
Think harder	L10	Addition and Subtraction in context	Reading trap: who is in the group (optional, never scored)	**9 children (5 + 3 + 1, counting Ali)**

The strand labels are for the tutor only and must not appear on any child or parent page. Each question is a fresh example of the Start here idea of its lesson (different numbers from the lesson pages), so a child who understood the lesson can answer it. Before first use, a tutor should read each question against what the lesson actually taught.

2. Giving it: before and during

1. A week before: send the grown-up note (L10_Check_Parent_Note.pdf) with the lesson materials. Families print the 4-page check sheet at 100%, fold it or put it in an envelope, and keep it closed.
2. Tell the group in the opening and at s-check1: the check is on your own paper, is not a race, may be skipped in part, and nothing is shown to the group.
3. Start at minute 54, after the exit ticket. Children open the sheet only when you say. Cameras show the child and the table; the paper lies flat and is not held up. A grown-up sits nearby and may read a question again, but gives no help with answers.
4. Read each page aloud, one question at a time, twice if a child asks (ask the whole group: say the question number you want again). Then give about 5 minutes of quiet work per page. Say nothing about right or wrong, and read no answers.

5. Allowed: fingers, counters, the kit squares and the ruler for question 9. Not allowed: a calculator, a grown-up giving answers, looking at the workbook. A child who finishes early turns the sheet over and draws quietly.
6. After page 2, take a one-minute stretch (stand, shake out, sip water). After page 4, say Pencils down (slide s-check2). Do not collect or look at any sheet.

3. Returning it privately: after the lesson

1. Same day: the grown-up takes ONE clear photo of each of the 4 pages (page flat, taken straight from above, the whole page in view including the 10 cm bar on page 4) and sends them to the program's parent contact (the address given at enrolment). Never to a child, never to a personal phone, never into the class chat.
2. Within 3 days: the tutor marks from the photos with the key below, on the tutor record sheet (tutor only). Nothing is written on the child's paper and no mark or score goes back to the child or the group.
3. The tutor chooses a progress word for each strand from the bands below and writes the parent note from the templates: the term line, four strand lines, one named strength and one next step. Sent only to the parent contact. No marks, no x out of 10, no ranking, no comparison with other children, no prediction.
4. Delete the photos and the record sheet from personal devices once the note is sent (keep only the note in the family file).
5. At the start of Term 2 say to the whole group: thank you for taking the check; there is nothing to share and nothing to fear. Never name a child or an answer.

Privacy checklist

- Sheets are never held up to the camera and never read out.
- No answer is said aloud during or after the check.
- The tutor never marks in front of the group and never says who finished first or last.
- Photos go to the parent contact only; the note goes to the parent contact only; no private message to any child.
- No score, no x out of 10, no ranking, no tally, no comparison between children.
- The recording shows the tutor and the screen only; pause it during silent work if the platform allows.

Absent, late joiners, families who prefer not to, upset children

- A child who was away or whose family prefers another time: take the check at the make-up slot (a small group, a parent beside the child on camera). The tutor never sits alone with one child on a private call.
- A child who joined late: the family may choose to leave out questions for lessons the child did not attend. Mark those questions not taught; they are left out of the strand score, and a strand with no question taught gets no line.
- A family that does not want the check: no problem. The child does the Lesson 10 work as usual and the report line uses the tutor's own notes only.
- A child who is upset or stuck: remind the group (open session) that every question can be skipped. Do not single the child out. The grown-up may stop the check at any time.

4. Answer key and marking

Mark each question R (right), P (partly right), N (not yet) or T (not taught: the child did not attend that lesson). Mark on the tutor record sheet only, never on the child's paper. A child may write steps in any clear layout. Do not mark neatness or spelling.

Q1 (L1) Count the sticks. Fill in the blanks.

Answer: 4 tens and 7 ones; 47 sticks

(a) __ tens and __ ones = 4 tens and 7 ones; (b) There are __ sticks altogether. = 47

R: 4, 7 and 47 all correct. **P:** Any one of the three correct (for example 47 but not the tens and ones).

Worked: 4 bundles of ten is 40, and 7 singles makes 47.

Watch for: 47 written as 74.; Counting each bundle as one stick (4 + 7 = 11).

Q2 (L2) Look at the number line. Fill in the blanks.

Answer: 67; 79; 53

(a) The arrow is pointing to __. = 67; (b) The number just before 80 is __. = 79; (c) Write in digits: fifty-three = __ = 53

R: All three correct. **P:** One or two of the three correct.

Worked: The arrow is 2 steps after 65, so 67. Just before 80 is 79. Fifty-three is 5 tens and 3 ones: 53.

Watch for: (a) 66 or 68 from miscounting ticks.; (b) 81 (after instead of before) or 70.; (c) 35 (digits swapped) or 503.

Q3 (L3) Look at the two cards. Use both cards to make 2 different numbers.

Answer: 38 and 83; the greater is 83

(a) The two numbers are __ and __ = 38 and 83 (either order); (b) The greater number is __. = 83

R: 38 and 83 (either order) and 83 as the greater. **P:** Both numbers made but the greater one wrong, or only one number made and the greater one right.

Worked: Put 3 first and 8 second to make 38. Put 8 first and 3 second to make 83. 83 has 8 tens and 38 has 3 tens, so 83 is greater.

Watch for: Writing 3 and 8 (single cards).; Writing 38 twice.; Saying 38 is greater because 8 is the greater digit.

Q4 (L4) Fill in the missing numbers.

Answer: 30, 35; 28, 30; 0

(a) Counting in 5s: 15, 20, 25, __, __ = 30, 35; (b) Counting in 2s: 22, 24, 26, __, __ = 28, 30; (c) Numbers in the 5s pattern end in 5 or __. = 0

R: All five gaps and the last digit correct. **P:** At least one part correct.

Worked: In 5s: 25, 30, 35. In 2s: 26, 28, 30. Numbers in the 5s end in 5 or 0.

Watch for: (a) 26, 27 (counting in ones).; (b) 27, 28 (counting in ones).; (c) a digit other than 0.

Q5 (L5) Look at the ten frames. Fill in the missing numbers.

Answer: 12; 42

(a) 7 + 5 = [ ] = 12; (b) 37 + 5 = [ ] = 42

R: Both correct. **P:** One correct.

Worked: 7 + 3 = 10, and 2 more makes 12. 37 + 3 = 40, and 2 more makes 42.

Watch for: (b) 32 or 312 (joining digits or forgetting the tens).; (a) 11 or 13 from a counting slip.

Q6 (L6) Add or subtract.

Answer: 62; 82; 32

(a) 52 + 10 = __ = 62; (b) 52 + 30 = __ = 82; (c) 52 − 20 = __ = 32

R: All three correct. **P:** One or two correct.

Worked: Adding 10 makes the tens digit 1 more: 62. 3 tens more is 82. 2 tens fewer is 32. The ones digit stays 2.

Watch for: (a) 53 (adding to the ones).; (c) 72 (adding instead of taking away) or 30.

Q7 (L7) Subtract.

Answer: 45; 62

(a) 68 − 23 = __ = 45; (b) 76 − 14 = __ = 62

R: Both correct. **P:** One correct.

Worked: 68 − 20 = 48, then 48 − 3 = 45. 76 − 10 = 66, then 66 − 4 = 62.

Watch for: (a) 55 (taking 13 or forgetting the 3).; (b) 70 or 62 reversed as 26.

Q8 (L8) Fill in the missing number.

Answer: 29; 8

(a) 26 + 13 = [ ] + 10 = 29; (b) 8 + 7 = 7 + [ ] = 8

R: Both correct. **P:** One correct.

Worked: (a) 26 + 13 = 39, and 39 is 29 + 10, so the box is 29. (b) Both sides must have the same total: 8 + 7 = 15, and 7 + 8 = 15, so the box is 8.

Watch for: (a) 39 (writing the total of the left side).; (b) 15 (the total instead of the missing number).

Q9 (L9) Use your ruler.

Answer: a line 6 cm long; 9 cm

(a) Draw a line 6 cm long. Start at the dot. = A line from the dot, 6 cm long (5.7 to 6.3 cm); (b) The line above is __ cm long. = 9

R: A line 5.7 to 6.3 cm long that starts at the dot, and 9. **P:** One of the two correct (a line between 5.5 and 6.5 cm counts as correct for part a if the photo is not clear).

Worked: Put the 0 mark of the ruler on the dot, draw to the 6 mark. The printed line starts at the 0 mark and ends at 9.

Watch for: Starting the line at 1 on the ruler (a 5 cm line).; (b) 10 (counting marks instead of gaps) or reading from the edge of the ruler.

Q10 (L10) Mei has 35 stickers. Ali gives her 10 more stickers. Then she gives 3 stickers to Ben. Write one number sentence for each step.

Answer: 35 + 10 = 45; 45 − 3 = 42; Mei has 42 stickers

(a) Step 1: .... = 35 + 10 = 45; (b) Step 2: .... = 45 - 3 = 42; (c) Mei has __ stickers now. = 42

R: Both step sentences have the right operation and numbers (any clear layout) and the answer is 42. **P:** The answer 42 without steps, or one correct step sentence, or both sentences right with one slip in the arithmetic.

Worked: Step 1: she gets 10 more, so add: 35 + 10 = 45. Step 2: she gives 3 away, so take away: 45 − 3 = 42.

Watch for: 32 (taking the 10 away from 35 and adding 3 or similar).; 48 (adding both numbers).; Using 35 again in Step 2.

Think harder (L10) Think harder (optional). Ali is in a line. There are 5 children in front of him and 3 children behind him. How many children are in the line?

Answer: 9 children (5 + 3 + 1, counting Ali)

There are __ children in the line. = 9

R: The answer is right. **P:** -

Worked: 5 in front and 3 behind makes 8, and Ali is in the line as well: 8 + 1 = 9.

Watch for: 8 (leaving Ali out).

Question 9, part (a): in the photo the page is flat, so measure the drawn line against the 10 cm print-check bar on the same page (the drawn line should be 57% to 63% of the bar). If the photo is not clear enough to tell, ask the grown-up (not the child) for a clearer photo, or count the line as right if the child's answer to part (b) is right. Never ask a child to show the line to the camera.

5. Tutor record sheet (tutor only; one per child; delete after the note is sent)

Child (first name only): ..... Date taken: .....

Q1 L1	Q2 L2	Q3 L3	Q4 L4	Q5 L5	Q6 L6	Q7 L7	Q8 L8	Q9 L9	Q10 L10	Think harder

Write R, P, N or T in each box. R = 1 point, P = 0.5, N = 0, T = left out. Then work out each strand score and choose a word from the table.

Strand (parent name)	Questions	Points / counted	Word
Numbers, tens and ones	Q1, Q2, Q3, Q4		☐ Showing this often ☐ Getting there ☐ Just beginning
Adding and taking away	Q5, Q6, Q7, Q8		☐ Showing this often ☐ Getting there ☐ Just beginning
Measuring length	Q9		☐ Showing this often ☐ Getting there ☐ Just beginning
Reading and solving stories	Q10		☐ Showing this often ☐ Getting there ☐ Just beginning

Progress words: how a score becomes a word

Each question counts 1 if right, 0.5 if partly right, 0 if not yet, and is left out if not taught. Strand score = points / questions counted. The word depends only on the child's own answers, never on other children.

Questions counted in the strand	Showing this often	Getting there	Just beginning
4	3 to 4 points	1.5 to 2.5 points	0 to 1 point
3	2.5 to 3 points	1.5 to 2 points	0 to 1 point
2	1.5 to 2 points	1 point	0 to 0.5 point
1	1 point (right)	0.5 point (partly right)	0 points (not yet)

If no question in a strand was taught to the child, write no line for that strand. Strand lines say what the child did and what helps next, never a grade. The optional Think harder question is never scored; add the optional line only if the child answered it correctly.

6. Parent report line templates (copy into the note to the parent contact)

Term 1 progress note for [Name]
Your child is learning to see numbers as tens and ones, to notice patterns and to say why.

Area (parent wording)	Showing this often	Getting there	Just beginning
Numbers, tens and ones Lessons 1 to 4. We looked at reading and writing numbers to 100 as tens and ones, number lines, comparing numbers and counting patterns.	[Name] is showing this often: reading and writing numbers to 100 as tens and ones, finding numbers on a number line, comparing numbers made from two cards and spotting counting patterns.	[Name] is getting there with reading and writing numbers as tens and ones, number lines, comparing numbers and counting patterns. A few more rounds with real things will help.	[Name] is just beginning with seeing numbers as tens and ones. Bundling real things in tens, and counting in tens and fives together, are good next steps.
Adding and taking away Lessons 5 to 8. We looked at adding by making a ten, jumping in tens, taking away tens and ones, and using = as a balance.	[Name] is showing this often: adding by making a ten, jumping in tens, taking away tens and ones, and using the equals sign as a balance.	[Name] is getting there with adding by making a ten, jumping in tens, taking away and using the equals sign as a balance. Counters and a number line will help.	[Name] is just beginning with adding and taking away within 100. Counters, a number line and small steps (add 10, take away 10) are good next steps.
Measuring length Lessons 9. We looked at drawing a line of a given length and reading a length in centimetres with a ruler.	[Name] is showing this often: drawing a line of a given length and reading a length in centimetres with a ruler.	[Name] is getting there with using a ruler: starting at the 0 mark and reading the length in centimetres.	[Name] is just beginning with using a ruler. Measuring things at home in centimetres, always starting at the 0 mark, is a good next step.
Reading and solving stories Lessons 10. We looked at reading a story twice and writing one step at a time.	[Name] is showing this often: reading a story twice and writing one step at a time.	[Name] is getting there with story steps: one add or one take away at a time, and starting the next step from the last answer.	[Name] is just beginning with story steps. Acting a story out with counters, one step at a time, is a good next step.

Then add (from your own notes):
One thing [Name] did well this term: [the tutor adds one named strength from their own notes, for example: explained why 62 is greater than 26 using bundles].
One next step: [the tutor adds one next step, for example: act out two-step stories with counters at home].
[Name] also tried the optional Think harder question. (Add this line only if the child answered it; never add a line if not.)
This note is about [Name]'s own learning this term. It is not a mark and it does not compare children.

A filled example (fictional child, Mei)

Term 1 progress note for Mei
Your child is learning to see numbers as tens and ones, to notice patterns and to say why.
Numbers, tens and ones: Showing this often. Mei is showing this often: reading and writing numbers to 100 as tens and ones, finding numbers on a number line, comparing numbers made from two cards and spotting counting patterns.
Adding and taking away: Getting there. Mei is getting there with adding by making a ten, jumping in tens, taking away and using the equals sign as a balance. Counters and a number line will help.
Measuring length: Showing this often. Mei is showing this often: drawing a line of a given length and reading a length in centimetres with a ruler.
Reading and solving stories: Getting there. Mei is getting there with story steps: one add or one take away at a time, and starting the next step from the last answer.
One thing Mei did well this term: she explained why 62 is bigger than 26 using bundles of ten.
One next step: act out two-step stories with counters at home.
This note is about Mei's own learning this term. It is not a mark and it does not compare children.

Words to avoid in the note: score, mark, out of, rank, top, below average, behind, ahead of, pass, fail, predicted, ready for. No claim about exams, GEP or any contest. No mention of other children. The note goes to the parent contact only.
