# Answer key: Lesson 5, Price Tags: Compare and Choose

**For the tutor and grown-ups.** Keep this page away from the child until they have finished and checked their own work. Ask *how do you know?* before saying right or wrong.

## Start here (pages 1 and 2)

**S1.** Look at the two price tags.

**Answer: bag ($18 is more than $12)**

The book costs $12 and the bag costs $18. 18 is greater than 12, so the bag costs more.

**Watch for:** Circling the first tag because it is on the left.; Choosing the item with the bigger picture.

**S2.** A hat costs $6. A toy car costs $15. How much more does the toy car cost than the hat?

**Answer: $9**

Count up from 6 to 10: 4. Then from 10 to 15: 5. 4 and 5 make 9. The toy car costs $9 more than the hat.

**Watch for:** Adding 6 and 15 to get 21.; Writing 15 or 6, a price, instead of the gap.

**S3.** Siti buys a pen for $4 and a ruler for $7. How much does she pay altogether?

**Answer: $4 + $7 = $11**

4 and 7: 4 and 6 make 10, and 1 more makes 11. Siti pays $11 altogether.

**Watch for:** Finding the gap, 7 take away 4, which is 3.; Writing $47 by joining the digits.

**S4.** Look at the three price tags.

**Answer: pen ($4 is the smallest)**

The jar costs $14, the pen costs $4 and the cup costs $8. In order, least first, they are 4, 8, 14. The pen costs the least.

**Watch for:** Choosing the one that costs the most.; Choosing the first tag in the row.

**S5.** A shoe costs $12. Ravi pays with two ten-dollar notes. How much change does he get?

**Answer: $8**

Two ten-dollar notes make $20. Count up from 12 to 15: 3. Then from 15 to 20: 5. 3 and 5 make 8. Ravi gets $8 change.

**Watch for:** Adding 12 and 20.; Counting up only to 15 and writing 3.

**S6.** Mei wants a toy fish that costs $17. She has $12. How much more money does Mei need?

**Answer: $5**

Count up from 12 to 17. That is 5 steps. Mei needs $5 more.

**Watch for:** Adding 12 and 17.; Writing 17, the price of the toy fish.

## Think harder (page 3)

**T1.** Look at the three price tags.

**Answer: car; $28**

The car costs $43, the shoe $26 and the fish $15. The car costs the most and the fish costs the least. Count up from 15 to 43: 15 to 20 is 5, 20 to 40 is 20, 40 to 43 is 3. 5 and 20 and 3 make 28.

**Watch for:** Finding the gap between the car and the shoe, which is 17.; Adding the three prices.

**T2.** A mug and a lamp cost $16 together. The lamp costs $6 more than the mug.

**Answer: $5; $11**

Try $5 for the mug: the lamp is 5 and 6 more, which is 11. 5 and 11 make 16. So the mug costs $5 and the lamp costs $11.

**Watch for:** Giving 16 and 6 as the two prices.; Halving 16 to get 8 and 8 and stopping.

**T3.** A robot costs $27. A drum costs $18.

**Answer: $45; $23; No**

27 and 18 make 45. For the change, count up from 27 to 30: 3. Then from 30 to 50: 20. 3 and 20 make 23. 45 is more than 40, so $40 is not enough.

**Watch for:** Subtracting 50 take away 27 and getting 33.; Saying Yes because 40 is a big number.

**T4.** Look at the five price tags. Ben spends all his money each time and uses each tag once. There are two ways each time.

**Answer: $3 and $8; $4 and $7. $2, $4 and $8; $3, $4 and $7**

For $11, start with the tag that costs the least: $2 needs 9 (no tag), $3 needs 8 (the cup, yes), $4 needs 7 (the ruler, yes). For $14 with three different tags, start with $2: $2 and $3 need 9 (no tag); $2 and $4 need 8 (the cup, yes); $2 and $7 need 5 (no tag). Then start with $3 (without $2): $3 and $4 need 7 (the ruler, yes); $3 and $7 need 4 (the pen, the same way again). So the two ways are $2, $4 and $8, and $3, $4 and $7. Any order is fine.

**Watch for:** Stopping after the first way.; Using the same tag twice.

## Go further (page 4)

**G1.** The Hidden Price. A cake costs $12 more than a pie. A cake and a pie cost $52 together.

**Answer: $20; $32**

Take the extra $12 away: 52 take away 12 is 40. Share 40 into two equal parts: 20 and 20. The pie costs $20. The cake costs $12 more: $32. Check: 20 and 32 make 52.

**Watch for:** Writing 52 and 12 as the prices.; Halving 52 to get 26 and 26.

**G2.** A scooter costs $7 more than a puzzle. A doll costs $5 less than the scooter. The puzzle, the scooter and the doll cost $33 together.

**Answer: $8; $15; $10**

Try $5 for the puzzle: the scooter is 12, the doll is 7 and the three make 24. Too small. Try $8: the scooter is 15, the doll is 10 and 8 and 15 and 10 make 33.

**Watch for:** Giving 33 divided into three equal parts, 11 each.; Making the doll cost $5 more instead of $5 less.

**G3.** Mei has $100. She buys a shoe for $27 and a toy car for $16.

**Answer: $43; $57; $11**

27 and 16 make 43. Count up from 43 to 50: 7. Then from 50 to 100: 50. 7 and 50 make 57. The shoe costs 27 take away 16, which is 11, more than the toy car.

**Watch for:** Subtracting only the shoe: 100 take away 27.; Writing 43 as the change.

## Investigation (page 5): Mind the gap

**First: $7 (3 and 4 more is 7). There are 3 pairs: $3 and $7, $7 and $11, $8 and $12. Check each: 7 take away 3 is 4; 11 take away 7 is 4; 12 take away 8 is 4. No other pair has a gap of exactly 4.**

**Look for:** A child who picks a tag and counts up 4 to see if the new price is on a tag; a child who finds all 3 pairs by working through the tags in order; a child who notices that $7 is in two pairs. Credit any clear method. Do not mark a child down for stopping at one or two pairs.

## Exit ticket (page 5)

**E1.** A hat costs $17. A scarf costs $9. How much more does the hat cost than the scarf?

**Answer: $8**

Count up from 9 to 17: 9 up to 10 is 1, and 10 up to 17 is 7. 1 and 7 make 8.

**Watch for:** Adding 17 and 9 to get 26.; Writing 17, the price of the hat.

**E2.** Ali buys a book for $9 and a pen for $6. How much does he pay altogether? Choose the correct answer. Write its number in the bracket.

**Answer: (3) $15**

Altogether means add. 9 and 6 make 15.

**Watch for:** Choosing (1) $3, which is the gap.; Choosing (2) $14 or (4) $16 after a counting slip.

**E3.** A toy costs $13. Ben gives the cashier $20. How much change does he get?

**Answer: $7**

Count up from the price to the money paid: 13 up to 20 is 7. Ben gets $7 change.

**Watch for:** Adding 13 and 20.; Writing 13, the price of the toy.

## Sneak-peek puzzles (not in the workbook)

1. The bag ($15 is more than $9).
2. $9. The kite costs $5 less than $14, and 14 take away 5 is 9.
