

LEVEL 1 • TERM 1 • LESSON 3 • FOR PARENTS

3 Digit Cards

WHAT WE DID

The order of the digits changes a number: the cards 3 and 5 make 35 and 53. Your child compared numbers tens first and made the biggest and smallest numbers from two cards, even with a 0 card.

> **The order of the digits changes the number. The left digit counts the tens, so we look at it first.**

TRY AT HOME (5 MINUTES)

1. Card game: write digit cards 0 to 9 on scrap paper. Each of you picks two cards and makes the biggest number you can. Who made the bigger number? Say why.
2. Swap it: pick two cards, read the number, swap the cards and read again. Ask: which is bigger, and how do you know?
3. Spot it: look at house numbers or lift floors. Ask: which has more tens? Which digit tells you?

When your child is stuck

Please let your child build both numbers with the tens bars and ones squares, or draw them, and wait 10 seconds before helping. Asking 'what could you try?' works better than giving the answer.

Words we used

- digit: one of the symbols 0 to 9
- tens digit: the left digit, it counts the tens
- ones digit: the right digit, it counts the ones
- compare: say which number is bigger or smaller, or if they are the same

Good questions

- How do you know?
- Which digit do we look at first?
- Can the 0 go on the left? Why not?

Things to have ready

- Digit cards: cut out the two sets of 0 to 9 from the kit page, or write the digits 0 to 9 on ten small pieces of scrap paper
- The printed workbook (pages 1 to 5) and the two kit pages (tens bars and ones squares, and digit cards), already cut out by a grown-up
- A pencil, a rubber and spare paper

Next lesson

Lesson 4: The 100 Square Explorer. Your child needs a pencil, paper and two or three colouring pencils. Missed a lesson? Every lesson is recorded; your tutor will share a private link with enrolled families.
