TUTOR GUIDE • LEVEL 1 • TERM 3 • LESSON 5 OF 10

Price Tags: Compare and Choose

Big idea: Which costs more, and by how much? The difference is the gap.. A price tag says how much one thing costs. To find how much more one costs than another, count up from the smaller price to the bigger price. That gap is how much more.

90 minutes • live online or face to face • up to 8 children • ages 6-8 • Notice it. Test it. Explain why.

1. At a glance

Strand	Money: compare prices, add and subtract money in dollars (Primary 1) (Money in dollars up to $100, and addition and subtraction within 100 in money stories (Primary 1, Whole Numbers and Money, p. 31); Decimal notation for money such as $1.50 (Primary 2, p. 33): not used, whole dollars only; Finding two unknown quantities from their total and their difference (a strip model, taught at Primary 3 and 4): beyond Primary 1) Strand label for the tutor only. NEW TOPIC: this price-comparison lesson is an added lesson, so a tutor or the owner should check it against the syllabus before first use. BEYOND PRIMARY 1 ON PURPOSE at Think harder and Go further only. Start here is Primary 1 money work: which of two prices is more, how much more (a gap within $20), the total of two items, the change from $20, the cheapest of three, and how much more money is needed (the 'how much more money does he need' item appears in Primary 1 papers). Think harder: the difference between the dearest and the cheapest of three, change from a fifty-dollar note, is a total enough for a budget, which two (and which three) prices add to an exact amount (choose-and-check), and a small total-and-difference story with a strip. Go further is beyond Primary 1: a total-and-difference story at $52 ('The Hidden Price', two unknown prices found from their sum and gap), three prices found from clues, and a hundred-dollar change story. Owner decision, 22 and 23 Oct 2026: strong content with scaffolding, said plainly to families; every lesson names a beyond item. Do not describe the lesson as MOE-aligned. Money wording follows the Primary 1 paper patterns of 23 Oct: dollars as $12, cents (not needed here) as 50¢, whole dollars only, no $20 note (Singapore has none: a $20 payment is two ten-dollar notes), 'How much more ...?', 'How much change ...?', 'How much more money does he need?', 'cashier'. Non-routine types (tutor only): compare with a difference, guess and check (which two items), choose numbers that add to a total, build prices from clues.
Objectives	• Say which of two or three prices costs more, costs less, costs the most and costs the least. • Find how much more one price is than another by counting up from the smaller price, on a number line and with strips. • Find the total of two prices and the change from $20, and say how much more money is needed. • Think harder: the gap between the dearest and the cheapest of three, change from $50, whether a budget is enough, and which two (or three) prices make an exact amount. • Go further: two prices from their total and their difference (The Hidden Price), three prices from clues, and a change story at $100.

Joining cold	**Remember warm-up covers:** Which of two numbers is greater (Term 1 Lesson 3, taught again with tens bars); Count up from one number to another to find the gap (Term 1 Lesson 7, taught again on a number line); Two strips and the gap between them (Term 1 Lesson 12, taught again with a picture). Only counting to 20 and the price tags from the kit. Nothing from the lessons before is needed: the warm-up compares two numbers with tens bars, counts up on a line and shows two strips with a gap. The words costs more, how much more, altogether and change are taught in Explore and the Mini-lesson. The play money from the lesson before is used for one example only. Not easy to miss: the next lesson uses the same price tags and Mi's Challenge Quest has a gate on this idea (which costs more, and by how much). A child who misses it watches the recording, does workbook pages 1 and 2 and cuts out the price-tag page before the next lesson. A child who joins here cold can follow: the warm-up compares numbers, counts up and draws strips again, and Start here keeps to prices within $20 with strips and a number line.
Child materials	• Your Term 3 workbook, pages 1 to 5, and the price-tag page (page 6), which a grown-up cuts out before the lesson: 12 price tags (9 with a price, 3 blank) • The play money from the lesson before (coins, notes and the $1 tokens), kept in its envelope: we use it for one example only • No printer or no cutting? Small pieces of paper with an item and a price written on each one • A pencil, a rubber and spare paper
Tutor materials	• The slide deck • Your own set of price tags and play money to show on camera, if you wish • A visible clock No ruler is needed. Nothing needs to be bought: everything can be found at home. The money is PLAY MONEY, not real money. Small pieces stay on the table: nothing goes in the mouth or ears; keep them away from younger brothers and sisters. No matches, toothpicks or anything sharp. Nobody cuts during the lesson; a grown-up cuts the tags beforehand.
Tiers	Start here (6 questions, pages 1 and 2), Think harder (4, page 3), Go further (3, page 4), Investigation and look-back (page 5), kit page (page 6). Labels are neutral; nobody is told which page they are on.
Beyond Primary 1 (tutor only)	The Hidden Price at G1, G2: Finding two unknown prices from their total and their difference (a cake costs $12 more than a pie, and the two cost $52 together), and three prices from clues (G2). Primary 1 papers set the work-back forms ('paid $50, got $12 back'; '$27 used, $48 left') and the count-up gap, so those are school level; the sum-and-difference story with a strip is Primary 3 and 4 work. Named puzzle: The Hidden Price. Non-routine types (tutor only): compare with a difference, guess and check, choose numbers that add to a total, build from clues. Never in Start here, never advertised to children.
Contest-style move	Used at Think harder, Go further and the Investigation: compare: how much more (a gap), three prices, a total and a difference; guess and check: which two items cost exactly this much; choose numbers that add to a total (three prices that make $14); build prices from clues (three toys). Never advertised to children or parents.

Before the lesson

- Solve every workbook question yourself first. Check the answers: S1 bag; S2 $9; S3 $15; S4 ball; S5 $7; S6 $5; T1 bag and $28; T2 glue $5 and cup $11; T3 $45, $23 and No; T4 $3 and $8 or $4 and $7, and $2, $4, $8 or $3, $4, $7; G1 pie $20 and cake $32; G2 $8, $15, $10; G3 $43, $57, $11.
- Tell parents a week before: your book has the workbook and the price-tag page (page 6): a grown-up cuts out the 12 tags (9 with a price, 3 blank) before the lesson. The play money from the lesson before is used for one example only. The next lesson uses the tags and the play money again and has nothing new to cut.
- Have the slides open. Have your own price tags and play money to show on camera if you wish. Practise the shopper moves for the break.
- Check the recording captures the tutor and the shared screen. Children video is excluded; any unmuted voice is recorded. Greet each child by first name as they arrive, then start the recording, then say the notice; avoid first names while it runs.
- Be plain with families: comparing prices, the gap, the total and the change within $20 are Primary 1 work; the gap among three prices, change from $50, choosing prices for an exact amount and finding two prices from their total and gap go beyond Primary 1 on purpose. Do not call the lesson MOE-aligned. Money is whole dollars: no $1.50, no decimals. There is no $20 note: a $20 payment is two ten-dollar notes.
- Slides s-m1 to s-m5 keep the answers off the screen while you ask: the number line and the answer appear on the next slide. Read every question with its prices, and the four options of E2, aloud: the figures on the slides are small. Use the words costs more, how much more, altogether, change and cashier every time.

Safeguarding and recording (this lesson)

- The price tags and the play money are paper or card. Small pieces stay on the table: nothing goes in the mouth or ears. No matches or toothpicks. Nobody cuts during the lesson; a grown-up cut the tags beforehand.
- This lesson uses the main room only: no breakout rooms, so the tutor sees every camera. A parent sits nearby but does not give answers.
- Nobody holds paper or a tag up to the camera: a gallery view shows everyone. Children tick their own work against the answer slide, answer together on a count of three, or show fingers or a thumb for a choice. There is no private chat.
- Never read out a child's name with a right or wrong answer. The recording has the tutor, the shared screen and any voice that is unmuted. Children may mute and keep their cameras off. A child's page is never shown.
- Movement break: children need a little clear space, soft shoes or socks on a safe floor, no stairs and no running. Reaching and crouching are gentle; a child may stay seated and use arms only.
- A child who is still stuck ticks 'I am still stuck' on the look-back page. A grown-up may photograph that page after class and send it to the business WhatsApp only; photos are kept for 90 days after the program ends. The tutor then helps in the open session next lesson. No private messages to children, and no personal phones.
- The look-back is never collected in front of the group or read out. A pass is always allowed.

2. Timing plan (90 minutes exactly)

Minutes	Part	Min	Slides	Script fills
0–2	**Opening**	2	1: Price Tags: Compare and Choose	1:38
2–8	**Remember warm-up**	6	3: Warm-up: which is greater?, Count up to find the gap, Two strips and the gap	4:39
8–12	**Sneak-peek puzzles**	4	1: Sneak-peek puzzles	3:12
12–23	**Explore**	11	5: Explore: put the tags in order, In order: least to most, Explore: how much more?, The gap is how much more, What did we notice?	7:52

23–34	**Mini-lesson**	11	10: How much more?, Count up: the gap is 7, Your turn: how much more?, Check: the gap is 8, Altogether, Altogether: add the prices, Change: count up, Change: count up to what was paid, Which two cost exactly $15?, Two answers: start with the cheapest	9:10
34–38	**Brain break**	4	1: Shopper moves	3:10
38–70	**Workbook**	32	5: Workbook page 1: Start here, Check page 1, Workbook page 2: Start here, Check page 2, Choose your next page	24:01
70–76	**Talk time**	6	2: Talk and explain, Back to the sneak-peek	4:43
76–82	**Exit ticket**	6	2: Exit ticket, Check the exit ticket	4:20
82–85	**Look-back**	3	1: Look-back	2:06
85–90	**Flex time and goodbye**	5	1: Well done, inquirers!	0:24
	Total	**90**		**65:14**

The script needs 65:14 of the 90:00 when children are quick. A slow class (speech 10% slower, children and slide changes 20% slower) needs 77:07. The last 5 minutes are a standing buffer: if you are behind, use them; do not start anything new. Clock checks: minute 12 (end of sneak-peek), minute 38 (start of workbook), minute 70 (talk time). If more than 2 minutes behind at minute 38, skip in this order: Start with: shorten Explore round 3 (what did we notice) to one question; Then: cut the your-turn change example on the change slide (s-m4); Then: take the extra minutes from the flex time. Never skip the look-back or the camera and privacy moments.

3. Lesson script

Times show when each line should start, counted from the start of the lesson, if you keep to the script. SAY lines are spoken in your own words. REC lines are the short recording-voice cues for children who watch later. Children answer aloud, with fingers or hands; no private chat; no boards held up in front of the group.

0:00 – 2:00 Opening

script 1:38 of 2:00

0:00	SLIDE	Show slide **Price Tags: Compare and Choose** (s-title)
0:20	REC	*If you are watching the recording: hello! Get a pencil, paper, your workbook and your play money. Pause or rewind any time.*
0:31	DO	Greet each child by first name as they arrive. Then start the recording. While it runs, avoid names. Check that you can see each child. [0:22]
0:53	SAY	Hello, inquirers! Please stay muted unless I invite you to speak. Cameras on if you can, so I can see you; cameras off is fine too. Pencil ready, and your price tags on the table.
1:10	SAY	This lesson is recorded so a friend who is away can catch up. The recording has me, the shared screen and any voice that is unmuted. You may mute and keep your camera off.
1:28	SAY	Today we look at price tags. Which costs more? And how much more? We also find a total and the change.
	NOTE	Say the recording notice in the SAY line above in your own words after the recording has started: the recording has the tutor, the shared screen and any unmuted voice; children may mute and keep the camera off. The routine and the four inquirer rules were introduced in the first lesson of Term 1: do not re-teach them.
	NOTE	Plain statement for families when it comes up: comparing prices, the gap, the total and the change within $20 are Primary 1 work; the gap among three prices, change from $50, choosing prices for an exact amount and finding two prices from their total and gap go beyond Primary 1 on purpose.
	NOTE	New here? Say in one minute: our three rule words (notice it, test it, explain why); a guess is fine and you can always pass; after Start here you may choose Think harder, Go further or the Investigation; nobody holds paper to the camera. A child without the price tags writes an item and a price on small pieces of paper.

2:00 – 8:00 Remember warm-up

script 4:39 of 6:00

2:00	SLIDE	Show slide **Warm-up: which is greater?** (s-rem1)
2:15	REC	*Recording: join in! Look at each picture and say your answer out loud. Pause if you need longer.*
2:24	SAY	Look at the two numbers. Each bar is a ten and each square is a one. Look at the tens first.
2:34	ASK	Which number is greater, thirty-six or sixty-three? [wait about 20 s for answers]
2:58	ASK	How do you know? [wait about 25 s for answers]
3:25	SLIDE	Show slide **Count up to find the gap** (s-rem2)
3:40	SAY	Now a gap. We count up from twenty-eight to thirty-five. First up to the next ten, then the rest.
3:50	CHILDREN	Count up together from twenty-eight to thirty-five. Point to each tick on the line and say the number. [0:35]
4:24	ASK	How many steps from twenty-eight to thirty? [wait about 18 s for answers]
4:46	ASK	How many steps from thirty to thirty-five? How many steps in all? [wait about 22 s for answers]
5:14	SLIDE	Show slide **Two strips and the gap** (s-rem3)
5:29	SAY	Two strips. Ali has eight stickers and Mei has three. The dashed line shows the gap.
5:37	ASK	How many more stickers does Ali have than Mei? [wait about 20 s for answers]

6:02	**ASK**	Show me with your fingers: count up from three to eight. How many steps? [wait about 20 s for answers]
6:28	**SAY**	The gap is how many more. Today a price is a strip too: the more it costs, the longer the strip.
	IF STUCK	If a child is unsure which number is greater, count the bars first, then the squares. For the gap, count the ticks with a finger. For the strips, count the squares of the gap or count up from 3 to 8 on fingers.
	NOTE	Answers: 63, because 6 tens is more than 3 tens; 2 steps, 5 steps, 7 in all; Ali, 5 more. Children answer with a whisper, fingers or hands. Nobody writes. Joining cold: all you need is counting to 20 and the pictures.

8:00 – 12:00 Sneak-peek puzzles

script 3:12 of 4:00

8:00	**SLIDE**	Show slide **Sneak-peek puzzles** (s-sneak)
8:12	**REC**	*Recording: pause now and try both puzzles on your paper. Guessing is fine. Press play for the next part.*
8:22	**SAY**	Two sneak-peek puzzles: ideas we have not learnt yet. A guess is a great start, and I do not know is welcome. Nobody is marked.
8:34	**READ**	Puzzle one. A bag costs thirteen dollars. A hat costs eight dollars. Which costs more? Write bag or hat.
8:44	**CHILDREN**	Children write bag or hat on their own paper. [0:45]
9:29	**READ**	Puzzle two. A kite costs five dollars less than a book. The book costs fourteen dollars. How much does the kite cost? I know because blank.
9:44	**CHILDREN**	Children write or draw their answer. [1:20]
11:04	**SAY**	Keep your paper. Nobody shows it. We will check our own thinking later, at Talk time.
	NOTE	Puzzle 1 answer: the bag. Puzzle 2 answer: $9 (not $19: costs less means take away). Look for good ideas to praise later (a child who counted back 5 from 14, or drew two strips). Do not write scores or keep a list.

12:00 – 23:00 Explore

script 7:52 of 11:00

12:00	**SLIDE**	Show slide **Explore: put the tags in order** (s-explore1)
12:15	**REC**	*Recording: pause now. Put your tags in order, then count up between two tags. Press play when you have tried.*
12:25	**SAY**	The price tags are the teachers today. Take the pencil tag, the glue tag and the ruler tag. Put them in a line with the tag that costs the least first.
12:40	**CHILDREN**	Children line up the three tags, least first. Tutor scans the cameras. [1:15]
13:56	**ASK**	Which tag costs the most? Which tag costs the least? How do you know? [wait about 40 s for answers]
14:42	**SLIDE**	Show slide **In order: least to most** (s-explore1-ans)
14:50	**SAY**	The pencil costs the least and the ruler costs the most. The bigger the number of dollars, the more it costs.
15:01	**SLIDE**	Show slide **Explore: how much more?** (s-explore2)
15:16	**SAY**	Round two. Take the cup tag and the ball tag. Which costs more?
15:22	**ASK**	Which costs more, the cup or the ball? [wait about 15 s for answers]
15:42	**SAY**	Now count up from the cup price to the ball price. Use your fingers. How many more dollars is the ball?
15:52	**CHILDREN**	Children count up on fingers from the cup price to the ball price. [1:20]
17:12	**ASK**	How many more dollars does the ball cost? How did you count? [wait about 45 s for answers]
18:03	**SLIDE**	Show slide **The gap is how much more** (s-explore2-ans)
18:11	**SAY**	Up from eight to ten is two. Up from ten to fourteen is four. Two and four make six. The ball costs six dollars more than the cup.
18:25	**SLIDE**	Show slide **What did we notice?** (s-explore3)

18:33	**ASK**	What did you notice? How did you find how much more? [wait about 60 s for answers]
19:38	**SAY**	The one that costs more has the bigger number. To find how much more, count up from the smaller price. The gap is how much more.
	IF STUCK	A child who counts 8 as the first finger counts one too many: say count the steps, not the numbers; start at 8 and say 9 for the first step. A child with no tags writes the prices on paper. A child who says 22 added the prices: ask whether the question is altogether or how much more.
	NOTE	Main room only; you cannot see small tags, so ask children to say the order and show a thumb. Answers: pencil $3, glue $5, ruler $7; the ball costs $6 more than the cup. Accept any child who counts up in ones or by going to ten first. Do not say the rule before the children do.

23:00 – 34:00 Mini-lesson

script 9:10 of 11:00

23:00	**SLIDE**	Show slide **How much more?** (s-m1)
23:08	**REC**	*Recording: keep watching and copy the examples. Rewind if you miss a step.*
23:14	**SAY**	Worked example. The toy car costs eleven dollars. The ball costs four dollars. The strips show the gap.
23:24	**ASK**	How much more does the car cost than the ball? Count up from four. [wait about 35 s for answers]
24:06	**SLIDE**	Show slide **Count up: the gap is 7** (s-m1a)
24:14	**SAY**	Four up to ten is six. Ten up to eleven is one. Six and one make seven. The car costs seven dollars more than the ball.
24:26	**SLIDE**	Show slide **Your turn: how much more?** (s-m2)
24:34	**READ**	Your turn. The bag costs thirteen dollars. The pen costs five dollars. How much more does the bag cost than the pen? Write the number on your paper.
24:50	**CHILDREN**	Children write how much more. Wait 10 seconds before helping. [0:55]
25:45	**SLIDE**	Show slide **Check: the gap is 8** (s-m2a)
25:53	**READ**	The bag costs eight dollars more than the pen. Tick your own work with a tick.
26:02	**SLIDE**	Show slide **Altogether** (s-m3)
26:10	**SAY**	Altogether means add. Ben buys the cup and the rubber.
26:14	**ASK**	How much does Ben pay altogether? [wait about 25 s for answers]
26:42	**READ**	Your turn. A sticker book costs three dollars. A bag costs thirteen dollars. How much altogether? Write the total on your paper.
26:54	**CHILDREN**	Children write the total. Wait 10 seconds before helping. [0:45]
27:40	**SLIDE**	Show slide **Altogether: add the prices** (s-m3a)
27:48	**READ**	The cup and the rubber: twelve dollars. The sticker book and the bag: sixteen dollars. Tick your own work.
27:58	**SLIDE**	Show slide **Change: count up** (s-m4)
28:06	**SAY**	Change is the money the cashier gives back. The toy car costs sixteen dollars. Mei gives the cashier two ten-dollar notes, which is twenty dollars. Count up from the price to what she paid.
28:23	**ASK**	How much change does Mei get? [wait about 35 s for answers]
29:01	**READ**	Your turn. A cap costs eleven dollars. The cashier gets twenty dollars. How much change? Write the number.
29:11	**CHILDREN**	Children write the change. Wait 10 seconds before helping. [0:45]
29:56	**SLIDE**	Show slide **Change: count up to what was paid** (s-m4a)
30:04	**READ**	The car: four dollars change. The cap: nine dollars change. Tick your own work.
30:11	**SLIDE**	Show slide **Which two cost exactly $15?** (s-m5)

30:19	**READ**	Ravi buys two things. They cost exactly fifteen dollars. Look at the five tags. Which two? There are two answers.
30:30	**CHILDREN**	Children try on their paper. Wait 15 seconds before helping. [1:15]
31:45	**SLIDE**	Show slide **Two answers: start with the cheapest** (s-m5a)
31:53	**SAY**	Start with the cheapest tag and ask what partner it needs. Five needs ten: the book. Seven needs eight: the cup. So the two answers are five and ten, and seven and eight.
	IF STUCK	If a child adds a tag to itself, say two different things. If a child finds one answer and stops, ask what the next tag needs. If a child writes 18 for how much more, ask whether the question says altogether.
	NOTE	Key words to use every time: costs more, costs less, how much more, altogether, change, cashier, exactly. Fixed question forms: How much more does ... cost than ...? How much ... altogether? How much change? Do not teach take away as the only method: counting up is the method of the lesson. Do not use decimals: whole dollars only.

34:00 – 38:00 Brain break

script 3:10 of 4:00

34:00	**SLIDE**	Show slide **Shopper moves** (s-break)
34:08	**REC**	*Recording: stand up and join in! Reach up high for big prices and crouch low for small ones.*
34:17	**SAY**	Stand up and get a sip of water. We are shoppers. A small price: crouch down low. A big price: reach up high. Two dollars: low.
34:30	**CHILDREN**	Call prices: $2, $10, $50, $20, $5. Then pairs: which is higher, $3 or $8; $12 or $9; $20 or $15. Children show with their bodies; seated children use arms only. [2:40]

38:00 – 70:00 Workbook

script 24:01 of 32:00

38:00	**SLIDE**	Show slide **Workbook page 1: Start here** (s-ws1)
38:08	**REC**	*Recording: pause now and do workbook page 1. When you finish a page, press play to check it.*
38:17	**READ**	Page 1, Start here. Question 1: look at the two price tags. Which costs more? Circle one. Question 2: a cup costs eight dollars. A bag costs seventeen dollars. How much more does the bag cost than the cup? Question 3: Siti buys a pen for seven dollars and a ball for eight dollars. Write the number sentence. Then fill in how much she pays altogether.
38:53	**CHILDREN**	Page 1, questions 1 to 3. Tutor walks the cameras, asks how do you know. Wait 10 seconds before helping. [8:10]
47:03	**SLIDE**	Show slide **Check page 1** (s-ws1ans)
47:11	**READ**	Question 1: the bag. Question 2: nine dollars. Question 3: seven plus eight is fifteen dollars. Tick your own page with a tick.
47:24	**SAY**	After question 3 you may choose: carry on, or try Think harder. Everyone may choose, at any time.
47:33	**SLIDE**	Show slide **Workbook page 2: Start here** (s-ws2)
47:41	**READ**	Page 2. Question 4: look at the three tags. Which costs the least? Circle one. Question 5: a ball costs thirteen dollars. Ravi pays with two ten-dollar notes. How much change does he get? Question 6: a book costs sixteen dollars. Mei has eleven dollars. How much more money does she need?
48:09	**CHILDREN**	Page 2, questions 4 to 6. [8:40]
56:49	**SLIDE**	Show slide **Check page 2** (s-ws2ans)
56:57	**READ**	Question 4: the ball. Question 5: seven dollars change. Question 6: five dollars more. Tick your own page.
57:07	**SLIDE**	Show slide **Choose your next page** (s-choice)
57:15	**SAY**	When you have finished Start here, you can choose Think harder, Go further or the Investigation. Everyone may choose. You can swap at any time. Anything not finished is for home too.

57:31	MOVE	Stand and reach up for 30 seconds, then sit down and choose.
58:01	CHILDREN	Choice time: Think harder (page 3), Go further (page 4), the Investigation (page 5), or finish and check your own work. Tutor never says who is on which page. If Start here took the whole time, say that pages 3 to 5 are for home, and keep the time. [4:00]
	IF STUCK	Q1: look at the dollars, the bigger number costs more. Q2: count up from 8 to 17: first to 10, then the rest. Q3: add the two prices; use tens: 7 and 3 make 10. Q4: put the three prices in order. Q5: count up from 13 to 20. Q6: count up from 11 to 16.
	IF STUCK	A child who is still stuck ticks I am still stuck on the look-back page. The grown-up can photograph that page after class and send it to the business WhatsApp (never a personal phone). You then help in the open session in the next lesson. Never a private message to a child.
	NOTE	Think harder has three prices, a total and a difference, change from $50, and choosing tags for an exact amount. Go further has The Hidden Price and three toys from clues (beyond Primary 1 on purpose). Do not announce who is on which page. Start here takes a middle child about 17 minutes, so the choice time is short: for most children pages 3 to 5 are for home. Say so plainly, do not skip the answer slides, and take any extra minutes from the flex time.

70:00 – 76:00 Talk time

script 4:43 of 6:00

70:00	SLIDE	Show slide **Talk and explain** (s-talk)
70:08	REC	*Recording: pause. Tell a grown-up who is right, and show how you know with a number line.*
70:16	READ	A kite costs seventeen dollars. A top costs twelve dollars. One child says: the top costs five dollars more than the kite. Another child says: the kite costs five dollars more than the top. Who is right? How could we show it on a number line?
70:42	CHILDREN	Test it: count up from 12 to 17 with your fingers or on a line. [1:00]
71:42	CHILDREN	Talk to the grown-up next to you or to your screen for one minute. Use the sentence starter: I think... because... [0:40]
72:22	ASK	Who would like to share? Volunteers first. A pass is always fine. [wait about 100 s for answers]
74:08	SLIDE	Show slide **Back to the sneak-peek** (s-sneakans)
74:16	SAY	Remember the sneak-peek? Puzzle one: the bag costs more. Puzzle two: five dollars less than fourteen is nine dollars.
74:25	ASK	Did anyone change their mind while we worked? You can just nod. [wait about 12 s for answers]
	NOTE	Model answer: the second child is right. 17 is greater than 12, so the kite costs more; counting up from 12 to 17 is 5 steps, so the kite costs $5 more. The first child swapped them. Volunteers first; never call a child by name to answer; no tallies, no rankings. Praise the reason, not the speed.

76:00 – 82:00 Exit ticket

script 4:20 of 6:00

76:00	SLIDE	Show slide **Exit ticket** (s-exit)
76:08	REC	*Recording: pause and do the exit ticket on your own. Then press play to check it.*
76:16	SAY	Exit ticket. Three questions, on your own, without looking back. Write your answers on page 5.
76:24	READ	E1. A hat costs fourteen dollars. A scarf costs five dollars. How much more does the hat cost than the scarf? E2. Ali buys a book for eight dollars and a pen for five dollars. How much does he pay altogether? Choose the correct answer. Option 1: three dollars. Option 2: twelve dollars. Option 3: thirteen dollars. Option 4: fourteen dollars. Write its number in the bracket. E3. A cap costs fourteen dollars. Ben gives the cashier twenty dollars. How much change does he get?
77:10	CHILDREN	Children answer E1 to E3 on their own. [2:50]
80:00	SLIDE	Show slide **Check the exit ticket** (s-exitans)
80:08	READ	E1: nine dollars more. E2: option 3, thirteen dollars. E3: six dollars change.

80:15	**SAY**	Tick your own ticket with a tick. Well done.
	NOTE	Nothing is collected or marked live. Children tick their own ticket. If many children miss one question, spend two minutes on it at the start of the next lesson, in the open session, no names. Do not read out any child result.

82:00 – 85:00 Look-back

script 2:06 of 3:00

82:00	**SLIDE**	Show slide **Look-back** (s-look)
82:08	**REC**	*Recording: pause and fill in your look-back box. You can pass.*
82:14	**SAY**	Look-back. Tick what was hard and what helped you. Write or draw one thing you did well. If you like, tick one thing to try next time. You can pass. Nobody reads it out. If you tick I am still stuck, ask your grown-up to take a photo of this page after class and send it to our business WhatsApp. Then we will help you.
82:46	**CHILDREN**	Children fill in the look-back box on page 5. [1:20]

85:00 – 90:00 Flex time and goodbye

script 0:24 of 5:00

85:00	**SLIDE**	Show slide **Well done, inquirers!** (s-end)
85:08	**SAY**	Well done, inquirers. Next lesson is The School Shop. Please keep your price tags and your play money in their envelope. Nothing new to cut. Goodbye, and thank you to the grown-ups.
	SLIDE	Show slide **Go further: the same price** (s-opt) *(optional)*
	SAY	Optional, only if you are on time: a pen and a rubber cost eleven dollars together. The pen costs nine dollars. How much does the rubber cost?
	CHILDREN	Short think time, then take two answers. [1:30]
	SLIDE	Show slide **If we have time: pick one** (s-menu) *(optional)*
	SAY	Spare-time menu. If the whole class is ahead, pick one or two activities from the guide (about 4 minutes each).
	NOTE	This is the standing buffer. If you are behind, finish the look-back and say goodbye. Do not start anything new. Optional slide answer: the rubber costs $2 (11 take away 9; count up from 9 to 11). If the whole class is ahead, use the Spare-time menu (guide section 3b) instead of rushing on.

3b. Spare-time menu: if the class is ahead

- Whole class ahead: use the Spare-time menu in the Flex time and the optional Go further slide. Pick one or two activities; do not start new content.
- A few children ahead: they may choose Go further or the Investigation, which are open to everyone. Never label or name a child, and never announce who is ahead.
- Never teach anything the next lesson needs. If the class is ahead, slow down: ask 'How do you know?' and let children explain, rather than rushing on.

Optional time, never added to the 90-minute sum. It comes from the 5-minute flex buffer, from slack in the parts, or from the optional Go further slide.

Activity	Minutes	You say	Recording cue	Answer
Is it always true?	4 (optional)	Mei says: the item with the bigger number of dollars always costs more. Is that always true? Test it with $9 and $12, then $20 and $15, then $50 and $5.	*Recording: pause. Mei says the bigger number always costs more. Test it with three pairs of prices.*	Yes, when the prices are in dollars: 12 is more than 9, 20 is more than 15 and 50 is more than 5. The bigger the number, the more it costs. The gap tells how much more.

Make a puzzle for your grown-up	4 (optional)	Pick two price tags. Write one question: how much more does one cost than the other? Give it to your grown-up, then check together by counting up.	*Recording: pause. Pick two price tags and ask your grown-up how much more one costs than the other.*	No single answer. Check by counting up from the smaller price to the bigger price: the number of steps is how much more.
Teach it back	3 (optional)	Pretend your grown-up or a toy has never found change. Teach them how to find the change from $20 for a toy that costs $13 by counting up.	*Recording: pause. Teach a grown-up how to find the change from $20 for a $13 toy by counting up.*	Count up from 13 to 15 (2), then from 15 to 20 (5). 2 and 5 make 7, so the change is $7. Counting up from the price to the money paid gives the change.

4. Questions, answers, hints and common mistakes

Sneak-peek puzzles (minutes 8 to 12)

Puzzle 1 (access): A bag costs $13. A hat costs $8. Which costs more? Write bag or hat.

Answer: The bag ($13 is more than $8).

Puzzle 2 (think): A kite costs $5 less than a book. The book costs $14. How much does the kite cost? I know because ___.

Answer: $9. The kite costs $5 less than $14, and 14 take away 5 is 9.

Unmarked. Never put answers on boards in front of the group and never read a name with an answer. Reveal the answers where your script says (usually Talk time).

Start here (workbook pages 1 and 2)

S1 **Look at the two price tags.**

Which costs more? Circle one.

Answer: bag ($18 is more than $12)

Hint (say this first): Look at the two prices. Which number is bigger?

Worked solution: The book costs $12 and the bag costs $18. 18 is greater than 12, so the bag costs more.

Common mistakes: Circling the first tag because it is on the left.; Choosing the item with the bigger picture.

Time for a middle child: about 2 min.

S2 **A cup costs $8. A bag costs $17. How much more does the bag cost than the cup?**

The bag costs $____ more.

Answer: $9

Hint (say this first): Count up from 8 to 17. Go to 10 first.

Worked solution: Count up from 8 to 10: 2. Then from 10 to 17: 7. 2 and 7 make 9. The bag costs $9 more than the cup.

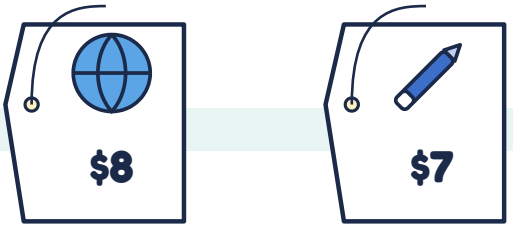

Common mistakes: Adding 8 and 17 to get 25.; Writing 17 or 8, a price, instead of the gap.

Time for a middle child: about 3 min.

S3 **Siti buys a pen for $7 and a ball for $8.**

(a) Write the number sentence. $☐ + $☐ = $☐

(b) She pays $____ altogether.

Answer: $7 + $8 = $15; $15

Hint (say this first): Altogether means add the two prices. 7 and 3 make 10.

Worked solution: 7 and 8: 7 and 3 make 10, and 5 more makes 15. Siti pays $15 altogether.

Common mistakes: Finding the gap, 8 take away 7, which is 1.; Writing $78 by joining the digits.

Time for a middle child: about 3.5 min.

S4 **Look at the three price tags.**

Which costs the least? Circle one.

Answer: ball ($11 is the smallest)

Hint (say this first): Put the three prices in order, least first.

Worked solution: The book costs $16, the ball costs $11 and the cup costs $13. In order, least first, they are 11, 13, 16. The ball costs the least.

Common mistakes: Choosing the one that costs the most.; Choosing the last tag in the row.

Time for a middle child: about 2.5 min.

S5 **A ball costs $13. Ravi pays with two ten-dollar notes. How much change does he get?**

He gets $____ change.

Answer: $7

Hint (say this first): Two ten-dollar notes are $20. Count up from 13 to 20.

Worked solution: Two ten-dollar notes make $20. Count up from 13 to 15: 2. Then from 15 to 20: 5. 2 and 5 make 7. Ravi gets $7 change.

Common mistakes: Adding 13 and 20.; Counting up only to 15 and writing 2.

Time for a middle child: about 3 min.

S6 **Mei wants a book that costs $16. She has $11. How much more money does she need?**

She needs $____ more.

Answer: $5

Hint (say this first): Count up from 11 to 16.

Worked solution: Count up from 11 to 16. That is 5 steps. Mei needs $5 more.

Common mistakes: Adding 11 and 16.; Writing 16, the price of the book.

Time for a middle child: about 3 min.

Think harder (page 3): the taught idea in a new setting

T1 **Look at the three price tags.**

(a) Which costs the most? Circle one.
(b) It costs $____ more than the one that costs the least.

Answer: bag; $28

Hint (say this first): Find the biggest price and the smallest price. Count up from the smallest.

Worked solution: The bag costs $43, the book $26 and the ball $15. The bag costs the most and the ball costs the least. Count up from 15 to 43: 15 to 20 is 5, 20 to 40 is 20, 40 to 43 is 3. 5 and 20 and 3 make 28.

Common mistakes: Finding the gap between the bag and the book, which is 17.; Adding the three prices.

Time for a middle child: about 4.5 min.

T2 **A glue stick and a cup cost $16 together. The cup costs $6 more than the glue stick.**

(a) The glue stick costs $____.
(b) The cup costs $____.

Answer: $5; $11

Hint (say this first): Try a price for the glue stick. Add 6 for the cup. Do they make 16?
Worked solution: Try $5 for the glue stick: the cup is 5 and 6 more, which is 11. 5 and 11 make 16. So the glue stick costs $5 and the cup costs $11.
Common mistakes: Giving 16 and 6 as the two prices.; Halving 16 to get 8 and 8 and stopping.
Time for a middle child: about 5 min.

T3 **A toy car costs $27. A ball costs $18.**

(a) The toy car and the ball cost $____ together.
(b) Kumar pays for the toy car with a fifty-dollar note. His change is $____.
(c) Kumar has $40. Is that enough for both? Circle Yes or No.

Answer: $45; $23; No

Hint (say this first): For part b, count up from 27 to 30, then on to 50.
Worked solution: 27 and 18 make 45. For the change, count up from 27 to 30: 3. Then from 30 to 50: 20. 3 and 20 make 23. 45 is more than 40, so $40 is not enough.
Common mistakes: Subtracting 50 take away 27 and getting 33.; Saying Yes because 40 is a big number.
Time for a middle child: about 5.5 min.

T4 **Look at the five price tags. Ben spends all his money each time. There are two ways each time.**

(a) Ben has $11 and buys two things. Way 1: $____ and $____. Way 2: $____ and $____.
(b) Ben has $14 and buys three things. Way 1: $____, $____ and $____. Way 2: $____, $____ and $____.

Answer: $3 and $8; $4 and $7. $2, $4 and $8; $3, $4 and $7

Hint (say this first): Start with the cheapest tag. What partner does it need?
Worked solution: For $11: $2 needs 9 (no tag), $3 needs 8 (the cup, yes), $4 needs 7 (the ruler, yes). For $14 with three tags: $2 and $4 need 8 (the cup, yes); $3 and $4 need 7 (the ruler, yes). Any order is fine.
Common mistakes: Stopping after the first way.; Using the same tag twice.
Time for a middle child: about 6 min.

Go further (page 4): mastery and extension

G1 **The Hidden Price. A cake costs $12 more than a pie. A cake and a pie cost $52 together.**

(a) The pie costs $____.
(b) The cake costs $____.

Answer: $20; $32

Hint (say this first): Take the $12 away first. Share what is left.
Worked solution: Take the extra $12 away: 52 take away 12 is 40. Share 40 into two equal parts: 20 and 20. The pie costs $20. The cake costs $12 more: $32. Check: 20 and 32 make 52.
Common mistakes: Writing 52 and 12 as the prices.; Halving 52 to get 26 and 26.
Time for a middle child: about 6 min.

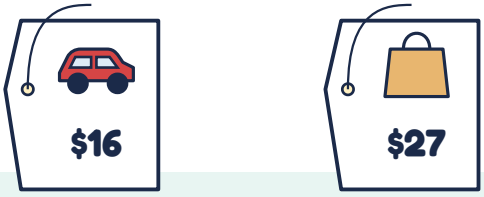

G2 **A top costs $7 more than a kite. A doll costs $5 less than the top. The kite, the top and the doll cost $33 together.**

(a) The kite costs $____.
(b) The top costs $____.
(c) The doll costs $____.

Answer: $8; $15; $10

Hint (say this first): Try a price for the kite. Find the top and the doll. Do the three make 33?
Worked solution: Try $5 for the kite: the top is 12, the doll is 7 and the three make 24. Too small. Try $8: the top is 15, the doll is 10 and 8 and 15 and 10 make 33.
Common mistakes: Giving 33 divided into three equal parts, 11 each.; Making the doll cost $5 more instead of $5 less.
Time for a middle child: about 6 min.

G3 **Mei has $100. She buys a bag for $27 and a toy car for $16.**

(a) The bag and the toy car cost $____ together.
(b) Mei gets $____ change.
(c) The bag costs $____ more than the toy car.

Answer: $43; $57; $11

Hint (say this first): Add the two prices first. Then count up to 100.
Worked solution: 27 and 16 make 43. Count up from 43 to 50: 7. Then from 50 to 100: 50. 7 and 50 make 57. The bag costs 27 take away 16, which is 11, more than the toy car.
Common mistakes: Subtracting only the bag: 100 take away 27.; Writing 43 as the change.
Time for a middle child: about 6 min.

Investigation (page 5): Mind the gap

Easy first step: Pick the $3 tag. Which tag costs exactly $4 more?
Then: The tags say $2, $3, $5, $7, $8, $11 and $12. Pick two so that one costs exactly $4 more than the other. How many pairs can you find? Write each pair.

Model answer: First: $7 (3 and 4 more is 7). There are 3 pairs: $3 and $7, $7 and $11, $8 and $12. Check each: 7 take away 3 is 4; 11 take away 7 is 4; 12 take away 8 is 4. No other pair has a gap of exactly 4.

Look for: A child who picks a tag and counts up 4 to see if the new price is on a tag; a child who finds all 3 pairs by working through the tags in order; a child who notices that $7 is in two pairs. Credit any clear method. Do not mark a child down for stopping at one or two pairs.
Common mistakes: Finding a pair with a gap of 3 or 5.; Counting the same pair twice in the other order.

Talk and explain (minutes 70 to 76)

A kite costs $17. A top costs $12. One child says: the top costs $5 more than the kite. Another child says: the kite costs $5 more than the top. Who is right? How could we show it on a number line? Sentence starter: I think ... because ...

> **Model answer: The second child is right. 17 is greater than 12, so the kite costs more. Count up from 12 to 17: that is 5 steps, so the kite costs $5 more than the top. The top costs $5 less than the kite.**

Look for: A child who counts up on the line, or says the dearer one has the bigger number, or says the gap is the same from either end. Not just a name. Volunteers first, a pass is always fine, never call a child by name to answer, no tallies.

Exit ticket (minutes 76 to 82): 3 questions

E1 **A hat costs $14. A scarf costs $5. How much more does the hat cost than the scarf?**

The hat costs $____ more.

> **Answer: $9**

Worked solution: Count up from 5 to 14: 5 up to 10 is 5, and 10 up to 14 is 4. 5 and 4 make 9.
Common mistakes: Adding 14 and 5 to get 19.; Writing 14, the price of the hat.

E2 **Ali buys a book for $8 and a pen for $5. How much does he pay altogether? Choose the correct answer. Write its number in the bracket.**

> **Answer: (3) $13**

Worked solution: Altogether means add. 8 and 5 make 13.
Common mistakes: Choosing (1) $3, which is the gap.; Choosing (2) $12 or (4) $14 after a counting slip.

E3 **A cap costs $14. Ben gives the cashier $20. How much change does he get?**

He gets $____ change.

> **Answer: $6**

Worked solution: Count up from the price to the money paid: 14 up to 20 is 6. Ben gets $6 change.
Common mistakes: Adding 14 and 20.; Writing 14, the price of the cap.

Look-back (minutes 82 to 85)

Children tick or write: *Something I did well*; *The hardest part was* (how much more; the change; which two make the amount; something else); *What helped me* (the number line; the strips; checking my answer; I was not stuck); *Next time I will try* (using a number line; drawing two strips; checking my answer; asking a question); *I am still stuck (my grown-up will photograph this page for my tutor)* and *I would like to pass*. Never collected or read out in front of the group. A child who ticks still stuck gets a check-in in the open session next lesson.

5. Home practice and online practice

#	Tier	Question	Answer
H1	Start here	Siti has $12. A toy costs $18. How much more money does she need? She needs $____ more.	6
H2	Start here	Lily buys a pen for $4 and a book for $10. How much does she pay altogether? She pays $____ altogether.	14
H3	Start here	Mei has $15. She buys a bag for $8 and a cap for $7. Does Mei have enough money? Circle Yes or No. I know because ___.	Yes. 8 and 7 make 15, and Mei has $15.
H4	Think harder	A pencil case and a bag cost $20 together. The bag costs $6 more than the pencil case. The pencil case costs $____. The bag costs $____.	$7 and $13
H5	Start here	Add. 37 + 6 = ___.	43

Online practice (`out/l25/practice`, key `t3l25`): 11 items; 10 have a template that makes unlimited similar questions with a computed answer. Every template variant is checked by the validator against a brute-force oracle and the runner's own JavaScript. No timers, no scores, no streaks.

6. Parent line for the term report

Your child is learning to compare prices, find how much more one costs than another and work out the total and the change. This week: counting up to find the gap, adding two prices and finding change from $20.

Term line (plan, section 5): Your child is learning to give a reason, and to read time and money in real life. Add one named strength and one next step from your own observation. No marks, no ranking, no claim of exam results.

7. Slide list

#	Time	Slide	On screen	Speaker note
1	0–2	**Price Tags: Compare and Choose** s-title	TODAY WE WILL: / Find which costs more, and how much more.	Lesson 5 of Term 3, 90 minutes. Objective: say which price is more, find how much more by counting up, find a total and a change, and choose items that make an exact amount. Plain statement for families: comparing prices, the gap, the total and the change within $20 are Primary 1 work; the gap between the dearest and the cheapest of three, change from $50, choosing prices that make an exact amount and finding two prices from their total and gap go past the school Primary 1 syllabus on purpose. Time plan: opening 0 to 2, warm-up 2 to 8, sneak-peek 8 to 12, explore 12 to 23, mini-lesson 23 to 34, brain break 34 to 38, workbook 38 to 70, talk 70 to 76, exit ticket 76 to 82, look-back 82 to 85, flex time and goodbye 85 to 90 (the buffer: do not start anything new). Think harder, Go further and the Investigation are for every child to choose. Say the recording notice in one line: you and the screen only; a child may keep the camera off.
2	2–8	**Warm-up: which is greater?** s-rem1	Which number is greater? / [picture: bundles 3 tens 6 ones] / [picture: bundles 6 tens 3 ones]	Two numbers made with tens bars and ones squares: 36 (3 bars, 6 squares) and 63 (6 bars, 3 squares). Ask: which number is greater (63). Why (6 tens is more than 3 tens; look at the tens first). This is Term 1 Lesson 3 taught again. A price with more dollars costs more, so today we compare numbers all the time. A child who is unsure counts the bars first. Children answer aloud. No writing, no marks. Joining cold: the picture teaches it.
3	2–8	**Count up to find the gap** s-rem2	[picture: number_line] / From 28 up to 35. How many steps in all?	A gap by counting up on a number line (Term 1 Lesson 7, taught again). From 28 count up to the next ten (30): 2 steps. Then from 30 up to 35: 5 steps. 2 and 5 make 7, so the gap between 28 and 35 is 7. Ask: how many steps from 28 to 30 (2); from 30 to 35 (5); how many in all (7). The jumps are drawn on the slide; cover them with your hand or the ask comes first, and read the line aloud as you ask. A child who is unsure counts the ticks with a finger. Children answer aloud. No writing.
4	2–8	**Two strips and the gap** s-rem3	[picture: bar_model] / Ali has 8 stickers. Mei has 3. How many more does Ali have?	Two strips drawn to scale (Term 1 Lesson 12, taught again): Ali 8 and Mei 3, with the gap shown and an empty box. Ask: whose strip is longer (Ali's); how many more stickers does Ali have (5). Say: the gap is how many more. Today a price is a strip too: the dearer the item, the longer the strip. A child who is unsure counts the squares of the gap or counts up from 3 to 8 on fingers. Answers: Ali; 5. Children answer aloud. No writing.
5	8–12	**Sneak-peek puzzles** s-sneak	Ideas we have not learnt yet. A guess is a great start. Nobody is marked. / PUZZLE 1: anyone can try: / A bag costs $13. / A hat costs $8. / Which costs more? Write bag or hat. / PUZZLE 2: think: / A kite costs $5 less than a book. / The book costs $14. / How much does the kite cost? I know because ___.	Puzzle 1 (bag $13, hat $8: the bag) is an access question: any child can compare two prices. Puzzle 2 is a thinking question on the lesson idea: the kite costs $5 less than the $14 book, so $14 take away $5 is $9. Say: two sneak-peek puzzles, ideas we have not learnt yet; a guess is a great start and I do not know is welcome; nobody is marked. Children write on their own paper. Nobody holds paper to the camera. There is no private chat. Answers: bag; $9. Do not reveal puzzle 2 until Talk time. Do not write scores or keep a list.

6	12–23	**Explore: put the tags in order** s-explore1	Take the pencil tag, the glue tag and the ruler tag. / Line them up. Put the tag that costs the least first. / Which tag costs the most?	Round 1, about 4 minutes. Each child takes three tags from the price-tag page: pencil, glue and ruler. They line them up with the one that costs the least first. Ask: which costs the most; which costs the least; how do you know (the biggest number of dollars). The prices are on the tags, so the slide shows no price. The picture appears on the next slide, after the children have answered. A child with no tags writes the three prices on paper (3, 5, 7) and orders them. Do not name a child with a wrong answer. Answer: pencil $3, glue $5, ruler $7, so the ruler costs the most and the pencil the least.
7	12–23	**In order: least to most** s-explore1-ans	[picture: price_tag] / [picture: price_tag] / [picture: price_tag] / The ruler costs the most. The pencil costs the least.	The answer for round 1: pencil $3, glue $5, ruler $7. Say: the tag that costs the least goes first. Children check their line against the picture. Words to use every time: costs more, costs less, costs the most, costs the least. Nobody holds tags up to the camera: children say the order and show a thumb when they agree.
8	12–23	**Explore: how much more?** s-explore2	Take the cup tag and the ball tag. / Which costs more? / Count up from the cup price to the ball price. Use your fingers. / How many more dollars is the ball? / [picture: number_line]	Round 2, about 5 minutes. Children take the cup tag ($8) and the ball tag ($14). Ask: which costs more (the ball). Then: how much more? Count up from 8 to 14 with fingers or on the line: 9, 10, 11, 12, 13, 14, six fingers. Some children go to 10 first (2 steps) and then to 14 (4 steps): 2 and 4 make 6. Both ways are right; ask a child to say how they counted. The line has no jumps drawn, so the answer is not shown. A child with no tags writes 8 and 14 on paper. Answer: $6 more. Say the answer in a full sentence: the ball costs $6 more than the cup.
9	12–23	**The gap is how much more** s-explore2-ans	[picture: number_line] / 2 and 4 make 6. The ball costs $6 more than the cup.	The answer for round 2, shown on the line: from 8 up to 10 is 2 steps and from 10 up to 14 is 4 steps, so the gap is 6. Another way is to count 6 single steps. Say: the gap is how much more. Children check their own count with a tick.
10	12–23	**What did we notice?** s-explore3	The tag that costs more has the bigger number. / How did you find how much more? / What is the same about a gap on a line and a gap in two strips?	Take one or two answers from volunteers. Key ideas: the dearer item has the bigger price; count up from the smaller price to the bigger price; the gap is the number of steps; the gap on a number line is the same as the gap between two strips. Repeat a child answer in your own words so the recording picks it up. Do not give the rule before the children say it. If nobody says it, show the two strips from the warm-up again.
11	23–34	**How much more?** s-m1	[picture: price_tag] / [picture: price_tag] / [picture: bar_model] / How much more does the car cost than the ball?	Worked example. The toy car costs $11 and the ball costs $4. Ask: which costs more (the car). How much more? The strips show the gap as an empty box. Count up from 4 to 10 (6 steps), then from 10 to 11 (1 step): 6 and 1 make 7. The car costs $7 more than the ball. Children say the answer in a full sentence after they have tried. The next slide shows the number line and the answer. Fixed question words every time: How much more does … cost than …? A child who subtracts 11 take away 4 gets the same: 7.
12	23–34	**Count up: the gap is 7** s-m1a	[picture: number_line] / 6 and 1 make 7. The car costs $7 more than the ball.	The answer for the car and the ball, shown on a line: 4 up to 10 is 6, then 10 up to 11 is 1, so 7. Say it as a sentence: the car costs $7 more than the ball. Link to the strips: the gap is the part of the car's strip that the ball's strip does not cover.
13	23–34	**Your turn: how much more?** s-m2	[picture: price_tag] / [picture: price_tag] / How much more does the bag cost than the pen? Write the number on your paper.	Your turn, one try. The bag costs $13 and the pen costs $5. Children write how much more on their own paper; wait 10 seconds before helping. Read the answer aloud afterwards: 8 (5 up to 10 is 5, 10 up to 13 is 3, and 5 and 3 make 8). Nobody holds paper up. A child who writes 18 added the prices: ask which is the question, the total or the gap. A child who writes 5 or 13 gave a price, not a gap. Answer: $8 more.
14	23–34	**Check: the gap is 8** s-m2a	[picture: number_line] / 5 and 3 make 8. The bag costs $8 more than the pen.	Read the answer aloud so a child watching the recording can tick their own work: the bag costs $8 more than the pen. Never ask a child to show a wrong answer to the group.

15	23–34	**Altogether** s-m3	[picture: price_tag] / [picture: price_tag] / Ben buys the cup and the rubber. How much does he pay altogether?	Altogether means add. The cup costs $10 and the rubber costs $2. Ask: how much does Ben pay altogether (12). Say it as a number sentence: 10 and 2 make 12. The total is on the next slide. Then a second one, read aloud without a picture: a sticker book costs $3 and a bag costs $13; how much altogether (16). Children write the second total on their own paper. Fixed question words: How much … altogether? A child who writes 8 found the gap instead of the total: ask which word is in the question, more or altogether.
16	23–34	**Altogether: add the prices** s-m3a	[picture: price_tag] / [picture: price_tag] / $10 + $2 = $12. Ben pays $12 altogether. / A sticker book $3 and a bag $13: $3 + $13 = $16.	The answers: $12 for the cup and the rubber, $16 for the sticker book and the bag. Read them aloud and children tick their own work. Say: the gap uses take away or count up; altogether uses add.
17	23–34	**Change: count up** s-m4	[picture: price_tag] / [picture: money] / [picture: number_line] / Mei pays with two ten-dollar notes. Count up from 16 to 20. How much change?	Change is the money the cashier gives back. The toy car costs $16 and Mei pays with two ten-dollar notes, which is $20 (there is no twenty-dollar note). Count up from the price to what she paid: 16 up to 20 is 4 steps. She gets $4 change. Ask: how much change; how do you know. Children answer aloud, then try one on paper: a cap costs $11 and the cashier gets $20; how much change (9: 11 up to 20 is 9). Say 'cashier' and 'change' in full sentences. The answer for the car is on the next slide. A child who adds 16 and 20 is finding a total: ask what the cashier gives back.
18	23–34	**Change: count up to what was paid** s-m4a	[picture: number_line] / 16 up to 20 is 4. The change is $4. For the cap: 11 up to 20 is $9.	The answers: the car's change is $4 (16 up to 20), the cap's change is $9 (11 up to 20). Read them aloud and children tick their own work. Say: to find the change, count up from the price to the money that was paid.
19	23–34	**Which two cost exactly $15?** s-m5	[picture: price_tag] / [picture: price_tag] / [picture: price_tag] / [picture: price_tag] / [picture: price_tag] / Ravi buys two things. They cost exactly $15. There are two answers.	Guess and check. Ask: which two of these five tags cost exactly $15? There are two answers. Model a way to be sure: start with the cheapest tag, $5, and ask what partner it needs (10: the book, yes). Then $7 needs 8 (the cup, yes). Then $8 has been used, $10 has been used, and $13 needs 2 (no tag). So the two answers are $5 and $10, and $7 and $8. Children try on paper first; wait 15 seconds. Do not say the starting rule until after they have tried; then say: start with the cheapest and look for its partner, so we do not miss one. The answer is on the next slide.
20	23–34	**Two answers: start with the cheapest** s-m5a	Tag | Needs | A match? / $5 | $10 | Yes: the book / $7 | $8 | Yes: the cup / $8 | $7 | Already found / $10 | $5 | Already found / $13 | $2 | No tag costs $2 / $5 and $10, and $7 and $8.	The answers: $5 and $10 (glue and book), and $7 and $8 (ruler and cup). The table shows the starting rule: take each tag in turn and ask what it needs to make $15. Read it row by row. This is the same idea as listing every way: start at the cheapest and work along, so none is missed.
21	34–38	**Shopper moves** s-break	Stand up. Be a shopper. / Big price: reach up high. Small price: crouch down low. / Sip some water.	Four minutes. Stand up on camera with a little clear space. Call prices and children show them with their bodies: a small price ($2) means crouch low, a middle price ($10) means hands at the waist, a big price ($50) means reach up high. Call pairs and ask which one is higher: $3 or $8, $12 or $9, $20 or $15. Then call: how much higher? Show with fingers for small gaps. No equipment, no running. A child may stay seated and use arms only. Do not give prizes or compare children.
22	38–70	**Workbook page 1: Start here** s-ws1	Questions 1 to 3. Take your time. / questions S1, S2, S3	Read questions 1 to 3 aloud. Children work on their own; the tutor walks the cameras and asks how do you know. Wait 10 seconds before helping. After question 3 any child may choose to carry on or try Think harder. Question 1: look at two price tags, which costs more. Question 2: a cup costs $8 and a bag costs $17; how much more does the bag cost. Question 3: a pen costs $7 and a ball costs $8; write the number sentence, then how much altogether.

23	38–70	**Check page 1** s-ws1ans	answers S1, S2, S3	Read each answer aloud. Children tick their own page with a tick. Never ask a child to show a wrong answer to the group. Answers: Q1 bag; Q2 $9; Q3 $7 + $8 = $15, so $15 altogether.
24	38–70	**Workbook page 2: Start here** s-ws2	Questions 4 to 6. Take your time. / questions S4, S5, S6	Read questions 4 to 6 aloud. Question 4: three price tags, which costs the least. Question 5: a ball costs $13 and Ravi pays with two ten-dollar notes; how much change. Question 6: a book costs $16 and Mei has $11; how much more money does she need. Children may use a number line or fingers to count up. Wait 10 seconds before helping.
25	38–70	**Check page 2** s-ws2ans	answers S4, S5, S6	Read each answer aloud so a child watching the recording can tick their own work. Never ask a child to show a wrong answer to the group. Answers: Q4 ball; Q5 $7 change; Q6 $5 more.
26	38–70	**Choose your next page** s-choice	Page | What it is / Think harder (page 3) | Three prices, change from $50, two or three tags that make an exact amount / Go further (page 4) | The Hidden Price, three toys from clues / Investigation (page 5) | Mind the gap / Check | Finish and check your own work / Everyone may choose. Not finished? Pages 3 to 5 are for home too.	Invite the whole group at once, for example: when you have finished Start here, you can choose Think harder, Go further or the Investigation. Never announce who is on which page and never name a child. Pairs are not split unless both children agree. Model answers are in the tutor guide. About 5 minutes.
27	70–76	**Talk and explain** s-talk	TWO CHILDREN SAY: / A kite costs $17. A top costs $12. / One child: the top costs $5 more than the kite. / Another child: the kite costs $5 more than the top. / Who is right? How could we show it on a number line? / I think … because …	One minute of talk to the grown-up next to you, or to your screen. Children test it on a number line or with fingers: count up from 12 to 17. Then volunteers first; a pass is always fine; never call a child by name to answer. Model answer: the second child is right. The kite costs more because 17 is greater than 12, and the gap is 5, so the kite costs $5 more than the top. The first child swapped them: the top costs $5 less than the kite. Repeat each child answer in your own words for the recording. The two children are in another class: no cast name is given the wrong answer.
28	70–76	**Back to the sneak-peek** s-sneakans	Puzzle 1: the bag. Puzzle 2: $9. $5 less than $14 is $9.	Reveal both puzzles now. Say: many of you wrote a good reason. Do not read out anyone earlier answer. Puzzle 1: $13 is more than $8, so the bag costs more. Puzzle 2: the kite costs $5 less than the $14 book, so count back 5 from 14 to get 9. It was the same idea as the two children, with different numbers.
29	76–82	**Exit ticket** s-exit	On your own. No looking back. / questions E1, E2, E3	Children answer on page 5. Read E1, E2 and E3 aloud, and the four options of E2 (the figures on the slide are small). Children tick their own ticket against the next slide. Nobody holds paper to the camera and there is no private chat.
30	76–82	**Check the exit ticket** s-exitans	answers E1, E2, E3	Read each answer aloud. Children tick their own ticket with a tick. Answers: $9 more; option 3, $13; $6 change.
31	82–85	**Look-back** s-look	[look-back box]	Three minutes. Children tick or write the look-back box on page 5. A pass is always allowed. It is never marked, never collected in front of the group and never read out. If a child ticks I am still stuck, a grown-up may photograph that page after class and send it to the business WhatsApp (the number is in the parent summary, never on a slide). You then help in the open session next lesson. Never a direct message to a child. The Next time I will try row is optional.

32	85–90	**Well done, inquirers!** s-end	Show a grown-up one thing you found out today. / NEXT LESSON: / The School Shop / Have ready: your price tags and play money in their envelope. Nothing new to cut.	Say goodbye and thank the grown-ups. Minutes 85 to 90 are flex time: the buffer. If you ran late, finish any open item (the look-back). Do not start anything new. Remind families that the next lesson uses the price tags and the play money again, and that nothing new needs to be cut. If the whole class is ahead, show the optional slides and use the Spare-time menu from the tutor guide.
33	optional	**Go further: the same price** s-opt	A pen and a rubber cost $11 together. The pen costs $9. / How much does the rubber cost?	Optional, only if you are on time. The pen and the rubber cost $11 together and the pen costs $9, so the rubber costs 11 take away 9, which is $2. Count up from 9 to 11 to check. Take two answers and move on. This links to the Hidden Price in Go further.
34	optional	**If we have time: pick one** s-menu	Activity | What we do / Is it always true? | The dearer item always has the bigger number. Try two prices with the same tens. / Make a puzzle | Pick two tags. Ask how much more. / Teach it back | Show a toy how to find the change by counting up. / Optional. Everyone may join.	Optional Spare-time menu, used only if the whole class is ahead. Pick one or two activities (3 to 5 minutes each); full tutor lines and answers are in the tutor guide. Never start new content and never name who is ahead. Slow down with how do you know rather than rushing on. These minutes come from the flex buffer and are not part of the 90-minute sum.

8. Recording cues and chapter markers

Say each cue once, to the camera, at the start of the part. Add a chapter marker at each time. A child watching alone cannot ask you a question, so say the page and question number aloud, read each question and each answer aloud, and repeat a child's answer in your own words.

Chapter	Part	You say (recording voice)	A child watching later
0:00	Opening	*If you are watching the recording: hello! Get a pencil, paper, your workbook and your play money. Pause or rewind any time.*	Gather your workbook, price tags, play money, pencil and paper. Press play when ready.
2:00	Remember warm-up	*Recording: join in! Look at each picture and say your answer out loud. Pause if you need longer.*	Play along. Say each answer out loud before the video does.
8:00	Sneak-peek puzzles	*Recording: pause now and try both puzzles on your paper. Guessing is fine. Press play for the next part.*	Pause. Try both puzzles on your own paper. A guess is fine.
12:00	Explore	*Recording: pause now. Put your tags in order, then count up between two tags. Press play when you have tried.*	Pause. Order the tags, then count up between two tags with your fingers.
23:00	Mini-lesson	*Recording: keep watching and copy the examples. Rewind if you miss a step.*	Watch and copy the examples. Rewind any step you missed.
34:00	Brain break	*Recording: stand up and join in! Reach up high for big prices and crouch low for small ones.*	Stand up. Reach high for big prices and crouch low for small prices.
38:00	Workbook	*Recording: pause now and do workbook page 1. When you finish a page, press play to check it.*	Pause. Do page 1, then play to check. Then page 2. Then choose a page to try.
70:00	Talk time	*Recording: pause. Tell a grown-up who is right, and show how you know with a number line.*	Pause. Explain your answer to someone at home and show it on a number line.
76:00	Exit ticket	*Recording: pause and do the exit ticket on your own. Then press play to check it.*	Pause. Do the exit ticket alone, then play to check it.
82:00	Look-back	*Recording: pause and fill in your look-back box. You can pass.*	Pause. Fill in the look-back box, or pass.
85:00	Flex time and goodbye	*Recording: well done for finishing! Show a grown-up one thing you found out.*	Show a grown-up your workbook and tell them one thing you found out.

9. Timing check (model, not a stopwatch)

Part	Allocated	Script	Slow class	Flag
opening	2:00	1:38	1:52	ok
remember	6:00	4:39	5:30	ok
sneak	4:00	3:12	3:44	ok
explore	11:00	7:52	9:18	ok
mini	11:00	9:10	10:46	ok
break	4:00	3:10	3:46	ok
work	32:00	24:01	28:37	ok
talk	6:00	4:43	5:35	ok
exit	6:00	4:20	5:05	ok
look	3:00	2:06	2:27	ok
flex	5:00	0:24	0:27	ok
Total	90:00	65:14	77:07	

Assumptions as docs/audit/timing_p1.md: speech 120 words a minute, read-aloud 110, slide change 25 s, a group question 10 s thinking plus 20 s answers, papers to the camera 30 s. Workbook: Start here has 6 questions; a middle child needs about 8.5 min for page 1 and 8.5 min for page 2 (a slower child about 1.7 times as long, so may finish page 1 and part of page 2; that is fine, the check-together slides cover every answer). The lesson has no breakout rooms, so no breakout time is counted.
