My Toolbox

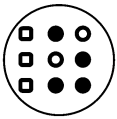

Eight tools for starting a problem

AGES
10-13

1 Spot the pattern

Find the rule, test it on a new case, then use it to jump far.

2 List every way

Count every case once with a systematic order; rule out repeats.

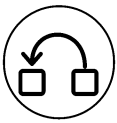

3 Draw it

Sketch and label a model; let the picture show what stays the same.

4 Make a table

Tabulate cases, find the change in each column, extend or generalise.

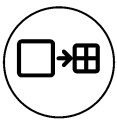

5 Work backwards

Reverse the operations from the result, then confirm by running forwards.

6 Guess and check

Guess, check, adjust using how far off you were; stop when every condition holds.

7 Try something simpler

Solve 1, 2, 3 cases first, find how the answer grows, then handle the real size.

8 Act it out

Model or simulate the situation (objects, fold, cut, dice) and record the outcomes.

Look back

Look at one problem from today

AGES
10-13

Pick one problem from today. There are no right answers. You can pass. Nobody reads it out.

1 **Did I answer the question that was asked (with units or a reason)?**

☐ yes ☐ not yet

2 **Is my answer reasonable? (Estimate or compare.)**

☐ yes ☐ not yet

3 **How can I check it another way? (Go backwards, estimate or try a smaller case.)**

I checked by ...

.....
