

LEVEL 1 • TERM 1 • LESSON 5 • FOR PARENTS

5 Make-a-Ten Adding

WHAT WE DID

We learned to add by making a ten first: fill a ten-frame, then add what is left. We used it for 8 + 6, for 28 + 6, and for longer sums with pairs that make 10.

> **Make tens first: fill up a ten, then add what is left.**

TRY AT HOME (5 MINUTES)

1. Ten-frame: draw a box of two rows of five. Put 8 buttons in it and 6 clips beside it. Move clips across to fill the box, then say: ten and ...
2. Stomp to ten: say a number from 1 to 9. Your child stomps how many more make ten. Then try 12, 18 and 25: how many more to the next ten?
3. Spot the pair: write 6, 3, 4 and 7. Ask your child to find the two that make ten, then add all four. Swap, and make a mistake on purpose for them to find.

When your child is stuck

Please let your child use counters or draw a ten-frame, and wait 10 seconds before helping. Asking 'how many empty spaces are there?' works better than giving the answer.

Words we used

- ten-frame: a box of ten spaces, two rows of five
- make a ten: move some counters so that one group is full
- split: break a number into two smaller numbers (6 is 2 and 4)
- total: the answer when we add

Good questions

- Which number is nearly full?
- How many did you move?
- How do you know the total did not change?

Things to have ready

- About 20 small things of two kinds (buttons, pasta, clips)
- Paper to draw a ten-frame on, or the tens bar from the kit page
- The printed workbook and the kit page, cut out by a grown-up
