MATH INQUIRERS HOLIDAY PROGRAM

# What Learners Get

Level 6 (ages 11-13, after the PSLE) • Maths + coding bridge • 10 lessons • 5 weeks • small groups (up to 8 per tutor) • live online from home

## In one line

Your child gets 15 hours of hands-on maths thinking with a tutor, a printed workbook and cut-out kit, a stamped Inquiry Journal, and the chance to move on to harder puzzles when they are ready.

## In the lessons

- **Teaching time.** Ten lessons of 90 minutes, two a week for five weeks (15 hours in all).
- **A clear routine.** Every lesson: warm-up, explore with objects, mini-lesson, brain break, worksheet, talk time and exit ticket.
- **Small group.** Up to 8, so the tutor can ask each child "How do you know?"
- **A way of thinking.** The four Inquirer rules: Notice the pattern. Test it, often in code. Check your answer. Explain why.
- **Three levels of questions.** Start here for everyone, Think harder, and Go further with an open Investigation for when your child wants more.

Each child needs a laptop or desktop with internet (a tablet works for Scratch but is slower). Scratch is free and needs no account.

## Progress and feedback

- **Progress marks** after every exit ticket: secure, developing, or needs help.
- **Progress notes:** a short note after each lesson on what your child enjoyed and tried.
- **A path to go further:** open Investigations in every lesson, and a short taster and chat if your child would like a harder level.
- **Parent feedback:** a short, honest note about how your child thinks, not just a score.

## Ten topics

**1** Code the Pattern · **2** Prime Hunters · **3** Below Zero · **4** Algebra Machines · **5** Every Possible Way · **6** Fair or Unfair? · **7** Turtle Geometry · **8** Secret Codes · **9** Data Detectives · **10** Showcase Challenge

## What the child takes home

| Item | What it is | When |
|---|---|---|
| **Student workbook** | 55 printable pages: 10 lessons with Start here, Think harder and Go further questions | Weekly pages by email; full book at the start |
| **Inquirer Kit (cut-outs)** | Unplugged code cards, square grid. Nothing needs to be bought. | Week 1 pages |
| **Python option** | An optional Python version of each lesson's coding task, for children who already know Python | Optional |
| **Inquiry Journal** | A stamp page at the front of the workbook. The tutor stamps a box after each lesson. | Every lesson |
| **Exit ticket** | One short question at the end of each lesson to show what they understood | Every lesson |
| **Certificate of Completion** | A printable certificate with the child's name | Week 5 |
| **Weekly parent email** | That week's workbook pages plus one thing to try at home | Weekly |

## Skills your child builds

- Tracing code
- Explaining thinking out loud, in words and drawings

## What is not included

- It is enrichment. It does not replace school maths or follow a school syllabus, and it is not linked to MOE or the Gifted Education Programme.
- No exam or ranking. Readiness signs guide extra challenge and are not shared between families.

## Planned price (to confirm)

S$650 per child for the 15-hour programme (S$65 a lesson), with the printed workbook, cut-out kit and all materials included. Introductory price for the first intake: S$500 (S$50 a lesson). Same price at every level.
