Mock reports (synthetic data)

A. Parent summary (two children) · B. Tutor view of one child · C. Tutor view of a group · D. Owner funnel. Made by practice/submit/mock_report.py. Nothing here is real.

SAMPLE REPORT. Synthetic data, invented names. Not a real child.

Otter’s practice: Digit detectives

Extension Workbook, Level 2, unit 1 · Numbers to 1000 · for a parent or guardian

Hello! Otter worked through this unit and sent the answers in. Here is a friendly picture of how it went. There are no scores or rankings here: every child learns at their own pace, and a mistake is simply a clue about what to look at next.

What went well

Otter had a go at every kind of question, which is a good start. The next part shows where to look together.

Worth looking at together

- **Place value to 1000**
  - Said 6: gave the digit, not the value (6 tens = 60).
  - Said 505: changed only the tens digit and did not carry to the hundreds.
- **Comparing and ordering**
  - Treated 85 as bigger than 508: looked at the first digit only, not at how many digits.

A good way to help: ask your child to explain how they got one of these answers, and listen for the idea behind it. Please do not worry about the wrong answer itself.

Left for later

These questions were skipped. That is fine; skipping a question is a good choice when it feels too hard right now:

- What comes 1 row below 347 on the chart?
- How many 3-digit numbers can you make from 2, 5, 8?

Checked on paper

One question was to do on paper and check against the picture on screen. Otter ticked “not yet”, so it may be worth drawing it together. These are not counted as marked questions.

A next step, if you would like one

Based on this unit, a small group class could be a friendly next step for place value and comparing numbers. If you would like to try a free trial class, you can ask for one in your portal when you are ready. There is no deadline and no obligation. (This note only appears in your own report; we do not use your child’s answers to send you messages unless you have agreed to that.)

Questions or corrections about this report or your child’s data: please contact our data protection contact, listed on the Privacy page.

Maple’s practice: Digit detectives

Extension Workbook, Level 2, unit 1 · Numbers to 1000 · for a parent or guardian

Hello! Maple worked through this unit and sent the answers in. Here is a friendly picture of how it went. There are no scores or rankings here: every child learns at their own pace, and a mistake is simply a clue about what to look at next.

What went well

- **Place value to 1000**: Maple answered these confidently.
- **Comparing and ordering**: Maple answered these confidently.
- **Patterns on the 1000 chart**: Maple answered these confidently.

Worth looking at together

- **Making numbers from digit cards**
  - Included 039 and 093: a 3-digit number cannot start with 0.
  - Listed only some: no system, so a number was missed.

A good way to help: ask your child to explain how they got one of these answers, and listen for the idea behind it. Please do not worry about the wrong answer itself.

Checked on paper

One question was to do on paper and check against the picture on screen. Maple ticked “I got it”. These are not counted as marked questions.

A next step, if you would like one

Based on this unit, a small group class could be a friendly next step for place value and comparing numbers. Otter (sample): Digit detectives

Whole Numbers · received 24 Nov, 16:42 (server time) · revision 1

#	Skill	Question	Result	Likely misconception
1	Place value to 1000	Write the number: 4 hundreds, 0 tens, 7 ones	✓ **right**	
2	Place value to 1000	What is the value of the 6 in 365?	× **to look at again**	Said 6: gave the digit, not the value (6 tens = 60).
3	Place value to 1000	10 more than 595	× **to look at again**	Said 505: changed only the tens digit and did not carry to the hundreds.
4	Comparing and ordering	Which is greater: 745 or 754?	✓ **right**	
5	Comparing and ordering	Order smallest first: 508, 85, 580, 805	× **to look at again**	Treated 85 as bigger than 508: looked at the first digit only, not at how many digits.
6	Comparing and ordering	Circle <, = or >: 399 ... 401	✓ **right**	
7	Patterns on the 1000 chart	Count on in 100s: 235, __, __	× **to look at again**	Counted on in 10s: changed the tens digit instead of the hundreds digit.
8	Patterns on the 1000 chart	What comes 1 row below 347 on the chart?	– **left for later**	
9	Making numbers from digit cards	List every 3-digit number from the cards 9, 0, 3	× **to look at again**	Included 039 and 093: a 3-digit number cannot start with 0.
10	Making numbers	How many 3-digit numbers	– **left for later**	

	from digit cards	can you make from 2, 5, 8?		
11	Draw it on paper	Draw 3 hundreds, 2 tens and 5 ones with base-ten blocks (do this on paper)	✎ **checked on paper: not yet**	
12	Make your own riddle	Write 3 clues so that only 372 fits. Many answers are right.	◇ **open question, not marked**	

By skill

Skill	Right	To look at	Skipped	Reading
Place value to 1000	1	2	0	○ worth practising together
Comparing and ordering	2	1	0	◖ some right, some to look at
Patterns on the 1000 chart	0	1	1	· not enough answers yet to say
Making numbers from digit cards	0	1	1	· not enough answers yet to say

Percentages cover auto-marked questions only. Checked-on-paper and open questions are shown separately and are never in a percentage. “Skills” come from the MOE strand and skill tags on each item (tutor-facing labels).

SAMPLE. Synthetic data. Tutor view of a group (alphabetical, never sorted by result).

Group L2A: Digit detectives

4 children in the group · 3 have sent answers · 1 not yet

Child	Place value to 1000	Comparing and ordering	Patterns on the 1000 chart	Making numbers from digit cards	Checked on paper
Maple (sample)	● going well	● going well	● going well	○ worth practising together	got it
Otter (sample)	○ worth practising together	◖ some right, some to look at	· not enough answers yet to say	· not enough answers yet to say	not yet
Pebble (sample)	◖ some right, some to look at	○ worth practising together	● going well	· not enough answers yet to say	checked
Willow (sample)	has not sent answers yet				

● going well · ◖ some right, some to look at · ○ worth practising together · · not enough answers to say

For planning the next lesson: the most common misconceptions

Question	Likely misconception	Children
List every 3-digit number from the cards 9, 0, 3	Included 039 and 093: a 3-digit number cannot start with 0.	2 of 3
Order smallest first: 508, 85, 580, 805	Treated 85 as bigger than 508: looked at the first digit only, not at how many digits.	2 of 3
How many 3-digit numbers can you make from 2, 5, 8?	Listed only some: no system, so a number was missed.	1 of 3
What is the value of the 6 in 365?	Said 6: gave the digit, not the value (6 tens = 60).	1 of 3

Children are listed alphabetically on purpose. This page is for the tutor only. It is not shown to families and is not a league table.
