TUTOR GUIDE • LEVEL 1 • TERM 2 • LESSON 4 OF 10

Odd + Odd: Always, Sometimes, Never

Big idea: One test is not a proof. An even number makes pairs with none left over. An odd number has one left over. Test many examples, then use a picture of pairs to see why.

90 minutes • live online or face to face • up to 8 children • ages 6-8 • Notice it. Test it. Explain why.

1. At a glance

Strand	Whole Numbers (Odd and even numbers (syllabus Primary 2, Whole Numbers 1.6); Reasoning and communicating: testing a claim with examples (process strand); Addition within 100 as the testing tool) Strand label for the tutor only. BEYOND PRIMARY 1 ON PURPOSE: odd and even numbers are Primary 2 content (Whole Numbers 1.6), so this whole lesson goes past the school Primary 1 syllabus (owner decision, 22 Oct 2026: strong content with scaffolding). Say this plainly to families. It is also flagged in the plan as a standalone inquiry that is safe to skip. Every Start here item is reached by pairing counters, so it is approachable after Explore. Do not describe it as MOE-aligned or syllabus-aligned. Contest tag (tutor only): parity (number sense).
Objectives	• Pair counters to decide whether a number up to 20 is odd (one left over) or even (none left over), and say that the last digit of an even number is 0, 2, 4, 6 or 8. • Test the claims odd + even, even + even and odd + odd with several sums, and say whether each is always, sometimes or never true. • Say that one example can show a claim is false but not that it is always true. • Go further: explain with pictures of pairs why odd + odd is always even (two left-over counters make a pair), and try odd + odd + odd.
Joining cold	**Remember warm-up covers:** Pair up counters or fingers and see if one is left over (8 makes pairs, 5 leaves one); Count in 2s from 2 to 20 on a number strip; Read the ones digit of a number like 47 (4 tens and 7 ones). Only counting to 20. Nothing from an earlier lesson is needed: the warm-up makes pairs with a picture, counts in 2s on a strip and shows 47 as bars and squares. The words odd and even are taught in Explore with counters. Lesson 4 of Term 2 is the safest lesson in Term 2 to skip or make up (plan note): it is a standalone inquiry and no later lesson needs it. A child who misses it watches the recording and does workbook pages 1 and 2. Lessons 5 to 8 build on one another, so do not skip those.
Child materials	• The printed workbook and the kit page of number cards 1 to 20 (page 6), cut out by a grown-up beforehand • About 20 small things of one kind (buttons, pasta, coins), or the counters from the Lesson 3 kit page • A pencil, a rubber and spare paper • Optional: two plates or bowls
Tutor materials	• A slide deck and a paper copy of the number cards to show on camera if you wish • A visible clock No ruler is needed. Nothing needs to be bought: everything can be found at home. No matches, toothpicks or anything sharp. Small things never go near the mouth or ears.
Tiers	Start here (6 questions, pages 1 and 2), Think harder (4, page 3), Go further (3, page 4), Investigation and look-back (page 5), kit page (page 6). Labels are neutral; nobody is told which page they are on.

Contest-style move	Used at Think harder only: odd and even by pairing; parity of a sum; always, sometimes, never: one failing test breaks a claim; can this total be made from two odd numbers?. Never advertised to children or parents.

Before the lesson

- Solve every workbook question yourself first. Check the claims with a few extra sums so you can answer a child who finds a surprising example.
- Tell parents a week before: print the workbook pages and the kit page, cut out the kit page and find the things listed. Small things stay away from mouths and younger children.
- Have the slides open and check the kit page is visible on screen share. Have a paper copy of the kit page and counters to show on camera if you wish.
- Check the recording captures the tutor and the shared screen. Children's video is excluded; any unmuted voice is recorded. Start the recording after the greeting, and avoid first names while it runs.
- Be plain with families: odd and even numbers are Primary 2 content, so this whole lesson goes beyond the school Primary 1 syllabus on purpose, always with counters and pairs. The plan marks it as the safest lesson in Term 2 to skip. Do not call it MOE-aligned.

Safeguarding and recording (this lesson)

- Counters and small things stay on the table: nothing goes in the mouth or ears. No matches, toothpicks or anything sharp. Keep small things away from younger brothers and sisters.
- This lesson uses the main room only: no breakout rooms, so the tutor sees every camera. A parent sits nearby but does not give answers.
- Nobody holds paper or a board up to the camera: a gallery view shows everyone. Children tick their own work against the answer slide, answer together on a count of three, or show fingers or a thumb for a choice. There is no private chat.
- Never read out a child's name with a right or wrong answer. The recording has the tutor, the shared screen and any voice that is unmuted. Children may mute and keep their cameras off. A child's page is never shown.
- Movement break: children need a little clear space, soft shoes or socks on a safe floor, no stairs and no running. A child may stay seated and move only their arms.
- A child who is still stuck ticks 'I am still stuck' on the look-back page. A grown-up may photograph that page after class and send it to the business WhatsApp only; photos are kept for 90 days after the program ends. The tutor then helps in the open session next lesson. No private messages to children, and no personal phones.
- The look-back is never collected in front of the group or read out. A pass is always allowed.

2. Timing plan (90 minutes exactly)

Minutes	Part	Min	Slides	Script fills
0–2	**Opening**	2	1: Odd + Odd?	1:30
2–8	**Remember warm-up**	6	3: Warm-up: make pairs, Count in twos, The last digit	4:32
8–12	**Sneak-peek puzzles**	4	1: Sneak-peek puzzles	3:06
12–26	**Explore**	14	6: Explore: pair up, Explore: pair up, Sort the number cards, Be a detective: test the sums, Be a detective: test the sums, What did we notice?	11:39
26–39	**Mini-lesson**	13	10: Odd and even, Odd and even, Test a claim: odd + even, One test can show a claim is false, One test can show a claim is false, Test a claim: even + even, Why? Draw the pairs, Why? Draw the pairs, Your turn: odd or even?, Check: odd or even?	10:47
39–43	**Brain break**	4	1: Clap or tap	3:17

43–71	**Workbook**	28	5: Workbook page 1: Start here, Check page 1, Workbook page 2: Start here, Check page 2, Choose your next page	22:34
71–77	**Talk time**	6	2: Talk and explain, Back to the sneak-peek	4:55
77–83	**Exit ticket**	6	2: Exit ticket, Check the exit ticket	5:01
83–86	**Look-back**	3	1: Look-back	2:23
86–90	**Flex time and goodbye**	4	1: Well done, inquirers!	0:41
	Total	**90**		**70:25**

The script needs 70:25 of the 90:00 when children are quick. A slow class (speech 10% slower, children and slide changes 20% slower) needs 83:25. The last 5 minutes are a standing buffer: if you are behind, use them; do not start anything new. Clock checks: minute 12 (end of sneak-peek), minute 43 (start of workbook), minute 71 (talk time). If more than 2 minutes behind at minute 43, skip in this order: Start with: cut the Mini-lesson check slide to two sums; Then: shorten Explore round 3 to the odd + odd tests only; Then: take the extra minutes from the flex time. Never skip the look-back or the camera and privacy moments.

3. Lesson script

Times show when each line should start, counted from the start of the lesson, if you keep to the script. SAY lines are spoken in your own words. REC lines are the short recording-voice cues for children who watch later. Children answer aloud, with fingers or hands; no private chat; no boards held up in front of the group.

0:00 – 2:00 Opening

script 1:30 of 2:00

0:00	SLIDE	Show slide **Odd + Odd?** (s-title)
0:15	REC	*If you are watching the recording: hello! Get a pencil, paper, your workbook, your kit page and counters. Pause or rewind any time.*
0:26	DO	Greet each child by first name as they arrive. Then start the recording. While it runs, avoid names. Check that you can see each child. [0:12]
0:38	SAY	Hello, inquirers! Please stay muted unless I invite you to speak. Cameras on if you can, so I can see you; cameras off is fine too. Pencil ready, and your counters, your workbook and the kit page of number cards, cut out, on the table.
1:01	SAY	This lesson is recorded so a friend who is away can catch up. The recording has me, the shared screen and any voice that is unmuted. You may mute and keep your camera off.
1:18	SAY	Today we are detectives. We test a claim: is a sum always odd, sometimes odd or never odd? First we meet odd and even numbers.
	NOTE	Say the recording notice in your own words after the recording has started: the recording has the tutor, the shared screen and any unmuted voice; children may mute and keep the camera off. The routine and the four inquirer rules were introduced earlier in the term: do not re-teach them.
	NOTE	New here? Say in one minute: our three rule words (notice it, test it, explain why); a guess is fine and you can always pass; after Start here you may choose Think harder, Go further or the Investigation; nobody holds paper to the camera. The first recording of the term shows the full routine.

2:00 – 8:00 Remember warm-up

script 4:32 of 6:00

2:00	SLIDE	Show slide **Warm-up: make pairs** (s-rem1)
2:25	REC	*Recording: join in! Show your answers on your fingers before I say them. Pause if you need longer.*
2:34	SAY	Pairs. I show counters in pairs. Look: is one left over? Show me with your hands: a flat hand if nothing is left over, one finger if one is left over.
2:50	ASK	Eight counters in pairs. Is one left over? [wait about 12 s for answers]
3:06	ASK	Five counters. Is one left over? [wait about 12 s for answers]
3:20	ASK	Ten counters. Is one left over? [wait about 12 s for answers]
3:36	ASK	Seven counters. Is one left over? [wait about 12 s for answers]
3:50	SLIDE	Show slide **Count in twos** (s-rem2)
4:16	SAY	Counting in twos. Colour or touch the numbers as we say them. Two, four, six, eight. Count with me up to twenty.
4:26	ASK	What comes after ten when we count in twos? [wait about 12 s for answers]
4:43	ASK	What comes after sixteen? [wait about 12 s for answers]
4:57	ASK	What comes before eight? [wait about 12 s for answers]
5:11	SLIDE	Show slide **The last digit** (s-rem3)
5:36	SAY	Last one. Forty-seven is four tens and seven ones. The ones digit is the last digit. It is the seven.
5:46	ASK	What is the last digit of thirty-eight? [wait about 12 s for answers]

6:02	**ASK**	What is the last digit of sixty-three? [wait about 12 s for answers]
6:17	**ASK**	And the last digit of ninety? [wait about 12 s for answers]
	IF STUCK	If a child is unsure about left over, point to the red ring on the picture or lay out the counters in twos on the table. For counting in twos, touch each number on the strip. For the last digit, show the bars and squares: the squares on the right are the ones.
	NOTE	Answers: 0, 1, 0, 1 (none, one, none, one left over); 12, 18, 6; 8, 3, 0. Children answer with fingers, hands or a whispered number. Nobody writes. Do not say odd or even yet: those words come in Explore. Joining cold: all you need is counting to 20.

8:00 – 12:00 Sneak-peek puzzles

script 3:06 of 4:00

8:00	**SLIDE**	Show slide **Sneak-peek puzzles** (s-sneak)
8:25	**REC**	*Recording: pause now and try both puzzles on your paper. Guessing is fine. Press play for the next part.*
8:34	**SAY**	Two sneak-peek puzzles: ideas we have not learnt yet. A guess is a great start, and I do not know is welcome. Nobody is marked.
8:47	**READ**	Puzzle one. Mei has 7 counters. She puts them in pairs. How many counters are left over? You may draw to help.
8:59	**CHILDREN**	Children draw or count and write the number on their own paper. [0:40]
9:39	**READ**	Puzzle two. Ben has 5 counters. Mei has 7 counters. They put all their counters together and make pairs. Is one counter left over? Circle Yes or No. Then write or draw how you know.
9:58	**CHILDREN**	Children write or draw their answer. [1:00]
10:58	**SAY**	Keep your paper. Nobody shows it. We will check our own thinking later, at Talk time.
	NOTE	Puzzle 1 answer: 1 counter is left over. Puzzle 2 answer: no; 5 and 7 make 12 counters, which is 6 pairs; the one left over from each group makes a pair. Look for good ideas to praise later (a child who drew the pairs). Do not write scores or keep a list.

12:00 – 26:00 Explore

script 11:39 of 14:00

12:00	**SLIDE**	Show slide **Explore: pair up** (s-explore1)
12:25	**REC**	*Recording: pause now. Make pairs with your counters. Sort your number cards. Test the sums. Press play when you have tried.*
12:36	**SAY**	Your hands are the teachers. Take 6 counters. Put them in pairs: two, two, two. Is one left over?
12:45	**CHILDREN**	Children make pairs with 6 counters: none left over. [0:30]
13:15	**SAY**	A number that makes pairs with none left over is called even. Six is even. Now take 7 counters. Make pairs.
13:26	**CHILDREN**	Children pair 7 counters: one left over. [0:30]
13:56	**SAY**	A number with one left over is called odd. Seven is odd.
14:02	**ASK**	Try 8, then 9, then 10. Say odd or even for each. Show me with your hand: flat hand for even, one finger for odd. [wait about 45 s for answers]
14:59	**SLIDE**	Show slide **Explore: pair up** (s-explore1-ans)
15:24	**SLIDE**	Show slide **Sort the number cards** (s-explore2)
15:49	**SAY**	Round two. Lay out your number cards one to twenty in a row. We sort them in two piles: even cards on the left, odd cards on the right. Pair counters if you are not sure.
16:07	**CHILDREN**	Children sort cards 1 to 10 into even and odd piles, pairing counters when unsure. [1:15]
17:22	**ASK**	Look at the last digit of the even cards. What do you notice? And the odd cards? [wait about 40 s for answers]

18:10	**SAY**	Even numbers end in 0, 2, 4, 6 or 8. Odd numbers end in 1, 3, 5, 7 or 9. Check with the cards from 11 to 20.
18:24	**SLIDE**	Show slide **Be a detective: test the sums** (s-explore3)
18:50	**SAY**	Round three. Be a detective. Mei says: odd plus odd makes an odd number. Let us test it. Make 3 counters and 5 counters in pairs. Put them together. Any left over?
19:06	**CHILDREN**	Children pair 3 and 5, push them together: 8, no counter left over, even. [1:00]
20:06	**ASK**	Three plus five. Is the total odd or even? [wait about 12 s for answers]
20:22	**SAY**	Now test odd plus even. Three plus four.
20:26	**CHILDREN**	Children build 3 + 4 = 7: odd. [0:40]
21:06	**SAY**	Now even plus even. Four plus six.
21:10	**CHILDREN**	Children build 4 + 6 = 10: even. [0:40]
21:50	**SLIDE**	Show slide **Be a detective: test the sums** (s-explore3-ans)
22:14	**SLIDE**	Show slide **What did we notice?** (s-explore4)
22:40	**ASK**	What did you notice? Did odd plus odd give odd? What could we test next? [wait about 45 s for answers]
23:32	**SAY**	Detectives test more than one example. Today we will test a claim many times.
	IF STUCK	A child who cannot tell if one is left over: lay the counters in two rows and see if the rows are the same length. A child with few counters: use cards or draw dots in pairs on paper.
	NOTE	Main room only; children say their answers aloud, you cannot see builds on small tiles. Answers: 6 even, 7 odd, 8 even, 9 odd, 10 even; 3 + 5 = 8 even; 3 + 4 = 7 odd; 4 + 6 = 10 even. Teach the words odd and even by pairing, not by the last digit first; the last-digit pattern is found from the cards. Do not say 'odd plus odd is always even' yet: that is the claim we test in the mini-lesson.

26:00 – 39:00 Mini-lesson

script 10:47 of 13:00

26:00	**SLIDE**	Show slide **Odd and even** (s-m1)
26:25	**REC**	*Recording: keep watching and copy the examples. Rewind if you miss a step.*
26:32	**SAY**	Look at six and seven in pairs. Six makes pairs with none left over: even. Seven has one left over: odd. For a big number like fifty-seven, the tens are all in pairs, so the last digit decides.
26:50	**ASK**	Is fifty-seven odd or even? How do you know? [wait about 25 s for answers]
27:20	**SLIDE**	Show slide **Odd and even** (s-m1-ans)
27:45	**SLIDE**	Show slide **Test a claim: odd + even** (s-m2)
28:10	**SAY**	Now be a detective. Claim: an odd number plus an even number is always odd. We test it with three sums: three plus four is seven, five plus eight is thirteen, seven plus two is nine.
28:28	**ASK**	Are those totals odd or even? Does the claim work for all three? [wait about 20 s for answers]
28:54	**SLIDE**	Show slide **One test can show a claim is false** (s-m3)
29:20	**SAY**	Another claim: an odd number plus an odd number is odd. Let us test three plus five.
29:28	**ASK**	What is three plus five? Is the total odd or even? [wait about 20 s for answers]
29:54	**ASK**	So is odd plus odd always odd, sometimes odd or never odd? Does one test that fails show the claim is not always true? [wait about 25 s for answers]
30:30	**SAY**	One test that fails is enough to show a claim is not always true. Three tests that work do not prove a claim for every number. We need a picture to see why.
30:47	**SLIDE**	Show slide **One test can show a claim is false** (s-m3-ans)
31:12	**SLIDE**	Show slide **Test a claim: even + even** (s-m3b)

31:37	**SAY**	One more claim: an even number plus an even number is always even. Test four plus six, eight plus two and ten plus ten.
31:49	**ASK**	What are the totals? Are they odd or even? Does the claim work? [wait about 25 s for answers]
32:20	**SLIDE**	Show slide **Why? Draw the pairs** (s-m4)
32:46	**SAY**	Look at three plus five in pairs. Three has one left over. Five has one left over. Push them together.
32:56	**CHILDREN**	Now build seven and nine in pairs with your counters. Push them together. Is anything left over? [0:35]
33:30	**ASK**	What happened to the two left-over counters? Would it work for other odd numbers? [wait about 20 s for answers]
33:58	**SLIDE**	Show slide **Why? Draw the pairs** (s-m4-ans)
34:22	**SLIDE**	Show slide **Your turn: odd or even?** (s-m5)
34:48	**READ**	Your turn. Is each total odd or even? Four plus nine. Six plus eight. Seven plus five. Twelve plus three.
34:58	**CHILDREN**	Children write the total and odd or even for four sums. [1:15]
36:13	**SLIDE**	Show slide **Check: odd or even?** (s-m5a)
36:38	**READ**	Thirteen, odd. Fourteen, even. Twelve, even. Fifteen, odd. Tick your own answers with a tick.
	NOTE	Key words to use every time: pairs, left over, odd, even, test, always, sometimes, never. Do not say that tests prove a claim: say that tests can show it is false. Do not teach division or halving. This lesson goes beyond the school Primary 1 syllabus on purpose; keep the pace gentle.
	IF STUCK	If a child says odd plus odd is odd because the numbers are odd, ask them to test it: build three and five. If a child says one test proves it, ask: could a different pair give a different answer? Try another pair.

39:00 – 43:00 Brain break

script 3:17 of 4:00

39:00	**SLIDE**	Show slide **Clap or tap** (s-break)
39:25	**REC**	*Recording: stand up and join in! Clap for an even number, tap your knees for an odd number.*
39:34	**SAY**	Stand up and get a sip of water. I say a number. If it is even, clap twice. If it is odd, tap your knees once.
39:47	**CHILDREN**	Call 4, 7, 10, 13, 16, 19. Children clap for even and tap their knees for odd, and say odd or even aloud together. [2:30]

43:00 – 71:00 Workbook

script 22:34 of 28:00

43:00	**SLIDE**	Show slide **Workbook page 1: Start here** (s-ws1)
43:25	**REC**	*Recording: pause now and do workbook page 1. When you finish a page, press play to check it.*
43:34	**READ**	Page 1, Start here. Question 1: look at the pairs and fill in the missing numbers. Question 2: pair up counters and circle Odd or Even for each number. Question 3: count in twos and colour the numbers.
43:55	**CHILDREN**	Page 1, questions 1 to 3. Tutor walks the cameras, asks how do you know. Wait 10 seconds before helping. [6:40]
50:35	**SLIDE**	Show slide **Check page 1** (s-ws1ans)
51:00	**READ**	Question 1: none left over, one left over. Question 2: 4 is even, 9 is odd, 10 is even, 13 is odd. Question 3: the last digit is zero. Tick your own answers with a tick.
51:19	**SAY**	After question 3 you may choose: carry on, or try Think harder. Everyone may choose, at any time.
51:28	**SLIDE**	Show slide **Workbook page 2: Start here** (s-ws2)
51:53	**READ**	Page 2. Question 4: which number is even? Put its number in the bracket. Question 5: 11 children stand in pairs. How many children have no partner? Then circle Odd or Even. Question 6: decide if each statement is True or False.
52:16	**CHILDREN**	Page 2, questions 4 to 6. [6:40]
58:56	**SLIDE**	Show slide **Check page 2** (s-ws2ans)

59:21	**READ**	Question 4: option 3, fourteen. Question 5: one child has no partner; eleven is odd. Question 6: true, false, true, false.
59:33	**SLIDE**	Show slide **Choose your next page** (s-choice)
59:58	**SAY**	When you have finished Start here, you can choose Think harder, Go further or the Investigation. Everyone may choose. You can swap at any time. Anything not finished is for home too.
60:14	**MOVE**	Stand and stretch for 30 seconds, then sit down and choose.
60:44	**CHILDREN**	Choice time: Think harder (page 3), Go further (page 4), the Investigation (page 5), or finish and check your own work. Tutor never says who is on which page. If Start here took the whole time, say that pages 3 to 5 are for home, and keep the time. [4:50]
	IF STUCK	Q1: count the counters in the pairs, then the ringed one. Q2: pair up the counters, or draw dots two by two. Q3: say the numbers aloud, two at a time. Q4: look at the last digit. Q5: draw the 11 children in pairs. Q6: pair the counters for each number.
	IF STUCK	A child who is still stuck ticks 'I am still stuck' on the look-back page. The grown-up can photograph that page after class and send it to the business WhatsApp (never a personal phone). You then help in the open session in the next lesson. Never a private message to a child.
	NOTE	Think harder is for testing claims and for the last digit. Go further explains why with pictures. Do not announce who is on which page. Slow class: the workbook part needs about 31 minutes against 28, so Start here may fill most of it. Take the extra minutes from the flex time, do not skip the answer slides, and say that pages 3 to 5 are for home.

71:00 – 77:00 Talk time

script 4:55 of 6:00

71:00	**SLIDE**	Show slide **Talk and explain** (s-talk)
71:25	**REC**	*Recording: pause. Tell a grown-up who is right, and show them with counters.*
71:32	**READ**	Ravi tests 3 plus 5. He gets 8. He says: so odd plus odd is always even. Is one test enough? What could we do to be more sure?
71:47	**CHILDREN**	Try two more odd plus odd sums with counters. What do you get? [0:50]
72:37	**CHILDREN**	Talk to the grown-up next to you or to your screen for one minute. Use the sentence starter: I think... because... [0:50]
73:27	**ASK**	Who would like to share? Volunteers first. A pass is always fine. [wait about 80 s for answers]
74:53	**SLIDE**	Show slide **Back to the sneak-peek** (s-sneakans)
75:18	**SAY**	Remember puzzle two? Five and seven together make twelve, which is six pairs. The one left over from each group makes a pair. No counter is left over.
75:32	**ASK**	Did anyone change their mind about puzzle two while we worked? You can just nod. [wait about 15 s for answers]
	NOTE	Model answer: one test is not enough, because a different pair might give a different answer. Test more pairs, and use a picture of pairs to see why: each odd number has one left over, and two left-over counters make a pair. Volunteers first; never call a child by name to answer; no tallies, no rankings. Praise the reason, not the speed.

77:00 – 83:00 Exit ticket

script 5:01 of 6:00

77:00	**SLIDE**	Show slide **Exit ticket** (s-exit)
77:25	**REC**	*Recording: pause and do the exit ticket on your own. Then press play to check it.*
77:33	**SAY**	Exit ticket. Three questions, on your own, without looking back. Write your answers on page 5.
77:41	**READ**	E1. Is 17 odd or even? Circle Odd or Even. E2. Which number is even? Put its number in the bracket. E3. Can you make 14 by adding two odd numbers? Circle Yes or No.
78:00	**CHILDREN**	Children answer E1 to E3 on their own. [3:20]

81:20	**SLIDE**	Show slide **Check the exit ticket** (s-exitans)
81:45	**READ**	E1: seventeen is odd. E2: option 3, eighteen. E3: yes, seven plus seven.
81:52	**SAY**	Tick your own ticket with a tick. Well done. Put a tick by each one you got right.
	NOTE	Nothing is collected or marked live. Children tick their own ticket. If many children miss one question, spend two minutes on it at the start of the next lesson, in the open session, no names. Do not read out any child's result.

83:00 – 86:00 Look-back

script 2:23 of 3:00

83:00	**SLIDE**	Show slide **Look-back** (s-look)
83:25	**REC**	*Recording: pause and fill in your look-back box. You can pass.*
83:30	**SAY**	Look-back. Tick what was hard and what helped you. Write or draw one thing you did well. If you like, tick one thing to try next time. You can pass. Nobody reads it out. If you tick 'I am still stuck', ask your grown-up to take a photo of this page after class and send it to our business WhatsApp. Then we will help you.
84:03	**CHILDREN**	Children fill in the look-back box on page 5. [1:20]

86:00 – 90:00 Flex time and goodbye

script 0:41 of 4:00

86:00	**SLIDE**	Show slide **Well done, inquirers!** (s-end)
86:25	**SAY**	Well done, inquirers. Next lesson is Equal Groups. Please have 4 plates or bowls, about 20 small things of one kind, a pencil and paper. Goodbye, and thank you to the grown-ups.
	SLIDE	Show slide **Go further: what if?** (s-opt) *(optional)*
	SAY	Optional, only if you are on time: Ali says he can make 15 by adding two odd numbers. Can he? Try some sums with your counters.
	CHILDREN	Short think time, then take two answers. [1:30]
	SLIDE	Show slide **If we have time: pick one** (s-menu) *(optional)*
	SAY	Spare-time menu. If the whole class is ahead, pick one or two activities from the guide (about 4 minutes each).
	NOTE	This is the standing buffer. If you are behind, finish the look-back and say goodbye. Do not start anything new. Optional slide answer: no, 15 cannot be made from two odd numbers, because odd plus odd is always even (tests and the picture of pairs). If the whole class is ahead, use the Spare-time menu (guide section 3b) instead of rushing on.

3b. Spare-time menu: if the class is ahead

- Whole class ahead: use the Spare-time menu in the Flex time and the optional Go further slide. Pick one or two activities; do not start new content.
- A few children ahead: they may choose Go further or the Investigation, which are open to everyone. Never label or name a child, and never announce who is ahead.
- Never teach anything the next lesson needs. If the class is ahead, slow down: ask 'How do you know?' and let children explain, rather than rushing on.

Optional time, never added to the 90-minute sum. It comes from the 4-minute flex buffer, from slack in the parts, or from the optional Go further slide.

Activity	Minutes	You say	Recording cue	Answer

Is it always true?	4 (optional)	Ali says: even + even is always even. Test 4 + 6, 12 + 8 and 10 + 10. Then try to think of a pair that breaks the claim.	*Recording: pause. Test 4 + 6, 12 + 8 and 10 + 10. Is each total even? Can you break the claim?*	10, 20, 20: all even. No pair breaks it: each even number makes pairs with none left over, so together there are none left over.
Make a puzzle for your grown-up	4 (optional)	Write three sums. Before your grown-up adds, ask: will the total be odd or even? Then check by adding.	*Recording: pause. Write three sums. Ask a grown-up: odd or even? Then add to check.*	No single answer. Check the odd or even claim with the total, for example 5 + 6 = 11 odd, 7 + 9 = 16 even, 8 + 4 = 12 even.
Teach it back	3 (optional)	Pretend your grown-up or a toy has never met odd and even. Show them with pairs why 7 + 9 is even.	*Recording: pause. Show a grown-up with pairs why 7 + 9 is an even number.*	7 has one left over and 9 has one left over. The two left-over counters make a pair, so there is none left over: 16 is even.

4. Questions, answers, hints and common mistakes

Sneak-peek puzzles (minutes 8 to 12)

Puzzle 1 (access): Mei has 7 counters. She puts them in pairs. How many counters are left over? You may draw to help.

Answer: 1

Puzzle 2 (think): Ben has 5 counters. Mei has 7 counters. They put all their counters together and make pairs. Is one counter left over? Circle Yes or No. Then write or draw how you know.

Answer: No. 5 + 7 = 12 counters make 6 pairs. The one left over from the 5 and the one left over from the 7 make a pair.

Unmarked. Never put answers on boards in front of the group and never read a name with an answer. Reveal the answers where your script says (usually Talk time).

Start here (workbook pages 1 and 2)

S1 **Look at the pairs. Fill in the missing numbers.**

(a) 6 counters: ☐ left over.
(b) 7 counters: ☐ left over.

Answer: 6 counters: 0 left over; 7 counters: 1 left over

Hint (say this first): Put the counters in pairs. Is one counter without a partner?
Worked solution: 6 counters make 3 pairs with none left over. 7 counters make 3 pairs and 1 counter is left over.
Common mistakes: Writing the number of pairs instead of the number left over.; Not noticing the single counter at the end.
Time for a middle child: about 2 min.

S2 **Pair up counters or draw dots in pairs. Circle Odd or Even for each number.**

(a) 4
(b) 9
(c) 10
(d) 13

Answer: 4 even; 9 odd; 10 even; 13 odd

Hint (say this first): Put the counters in pairs. If none are left over, the number is even. If one is left over, it is odd.
Worked solution: 4 makes 2 pairs: even. 9 makes 4 pairs and 1 left over: odd. 10 makes 5 pairs: even. 13 makes 6 pairs and 1 left over: odd.
Common mistakes: Calling a big number even because it is big.; Looking at the first digit instead of the last digit.
Time for a middle child: about 3 min.

S3 **Count in 2s. Colour each number you say. Then fill in the missing number.**

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20

The last digits are 2, 4, 6, 8 and ☐.

Answer: The last digits are 2, 4, 6, 8 and 0

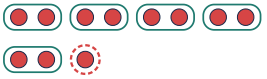

Hint (say this first): Say the numbers aloud: 2, 4, 6, 8, 10. Colour each one. Look at the last digit of each coloured number.
Worked solution: The numbers are 2, 4, 6, 8, 10, 12, 14, 16, 18, 20. The last digits are 2, 4, 6, 8, 0, 2, 4, 6, 8, 0. The missing digit is 0.
Common mistakes: Colouring every number.; Skipping 10 or 20.
Time for a middle child: about 2.5 min.

S4 **Which number is even? Write its number in the bracket.**

Answer: (3) 14

Hint (say this first): Pair up counters, or look at the last digit.
Worked solution: 7 is odd (last digit 7). 11 is odd (last digit 1). 14 is even (last digit 4). 15 is odd (last digit 5). So the even number is 14.
Common mistakes: Choosing the biggest number.; Choosing 11 because it has two same digits.
Time for a middle child: about 1.5 min.

S5 **Look at the 11 counters in pairs. Fill in the blank. Then circle Odd or Even.**

(a) ☐ counter has no partner.
(b) 11 is

Answer: 1 counter has no partner; 11 is odd

Hint (say this first): Count the counters two by two. Is one left without a partner?
Worked solution: 11 counters make 5 pairs. 1 counter is left without a partner, so 11 is odd.
Common mistakes: Writing 5 (the number of pairs).; Writing 0.
Time for a middle child: about 2.5 min.

True/False statements: 6 is even.; 9 is even.; 15 is odd.; 20 is odd.

S6 **Read each statement. Decide if it is True or False.**

Answer: True, False, True, False

Hint (say this first): Pair up counters for each number, or look at the last digit.
Worked solution: 6 is even: True. 9 is odd, not even: False. 15 is odd: True. 20 is even, not odd: False.
Common mistakes: Marking 9 is even as true.; Thinking 20 is odd because it is big.
Time for a middle child: about 2.5 min.

Think harder (page 3): the taught idea in a new setting

T1 **Mei says: an odd number plus an even number is always odd. Test it. Fill in the blanks.**

(a) 6 + 5 = ☐☐. Circle Odd or Even.
(b) 10 + 3 = ☐☐. Circle Odd or Even.
(c) 8 + 1 = ☐. Circle Odd or Even.
(d) Does the claim work for all three sums? Circle Yes or No.

Answer: Totals 11, 13, 9, all odd; Yes, the claim works for these three

Hint (say this first): Add each sum. Then look at the last digit of the total.
Worked solution: 6 + 5 = 11 (odd). 10 + 3 = 13 (odd). 8 + 1 = 9 (odd). All three totals are odd, so the claim works for these three sums. Three tests are good evidence, not a proof.
Common mistakes: Saying Yes means the claim is true for every number.; Adding wrongly (6 + 5 = 12).
Time for a middle child: about 4 min.

T2 **Circle Odd or Even for each number.**

(a) 57
(b) 80
(c) 34
(d) 91

Answer: 57 odd; 80 even; 34 even; 91 odd

Hint (say this first): The tens are in pairs. Look at the last digit. It tells you.
Worked solution: 57 ends in 7: odd. 80 ends in 0: even. 34 ends in 4: even. 91 ends in 1: odd.
Common mistakes: Looking at the first digit (the tens).; Thinking 0 is odd.
Time for a middle child: about 3 min.

T3 **Ravi says: an odd number plus an odd number is always odd. Test it with 9 + 3. Fill in the blanks.**

(a) 9 + 3 = ☐☐
(b) Is Ravi correct? Circle Yes or No.
(c) An odd number plus an odd number is odd. Circle Always, Sometimes or Never.

Answer: 9 + 3 = 12; No, the claim is not true; odd + odd is Never odd (pairs picture)

Hint (say this first): Add 9 + 3. Is the total odd or even? One example that fails is enough to show a claim is not true. For (c), think of the pairs picture.
Worked solution: 9 + 3 = 12, and 12 is even. So Ravi is not right. Each odd number has one counter left over, and the two left-over counters make a pair, so odd plus odd is never odd.
Common mistakes: Writing 11 or 13.; Saying Yes because 9 and 3 are both odd.
Time for a middle child: about 3 min.

T4 **Can you make each number by adding two odd numbers? Circle Yes or No.**

(a) 12
(b) 15
(c) 20

Answer: 12 yes (5 + 7); 15 no; 20 yes (9 + 11)

Hint (say this first): Try some pairs of odd numbers first. What kind of total do you get?
Worked solution: 12 = 5 + 7 (yes). 15 is odd, and two odd numbers always make an even total, so no. 20 = 9 + 11 (yes).
Common mistakes: Trying only one pair for 15 and giving up too soon.; Choosing Yes for every number.
Time for a middle child: about 4 min.

Go further (page 4): mastery and extension

G1 **Look at 3 + 5. Draw 3 counters and 5 counters in pairs. Fill in the missing numbers.**

(a) 3 counters have ☐ left over.
(b) 5 counters have ☐ left over.
(c) The two left-over counters make ☐ pair.

Answer: 1 left over, 1 left over, 1 pair

Hint (say this first): Draw the pairs, two by two. Ring the counter with no partner.
Worked solution: 3 counters make 1 pair and 1 left over. 5 counters make 2 pairs and 1 left over. The 2 left-over counters make 1 new pair, so 3 + 5 has none left over.
Common mistakes: Forgetting that the two left-over counters pair up.; Drawing the wrong number of counters.
Time for a middle child: about 5 min.

G2 **Add three odd numbers. Circle Odd or Even for each total.**

(a) 3 + 5 + 7 = ☐☐. Circle Odd or Even.
(b) 1 + 1 + 1 = ☐. Circle Odd or Even.
(c) 9 + 3 + 5 = ☐☐. Circle Odd or Even.
(d) What kind of number is odd + odd + odd? Circle Odd or Even.

Answer: 3 + 5 + 7 = 15 odd; 1 + 1 + 1 = 3 odd; 9 + 3 + 5 = 17 odd; odd + odd + odd is Odd

Hint (say this first): Add the first two. That total is even. Then add the third.
Worked solution: 3 + 5 = 8 (even), 8 + 7 = 15 (odd). 1 + 1 = 2, 2 + 1 = 3. 9 + 3 = 12, 12 + 5 = 17. Odd + odd is even, and even + odd is odd, so the total is odd.
Common mistakes: Saying even because odd + odd is even.; Adding wrongly.
Time for a middle child: about 5 min.

G3 **Look at 4 + 6. Draw 4 counters and 6 counters in pairs. Fill in the blank, then finish the sentence.**

(a) ☐ counters are left over.
(b) Even + even is even because ___.

Answer: 0 counters are left over; even + even is even because no counter is left over

Hint (say this first): Draw the pairs. Does either number have a counter left over?
Worked solution: 4 makes 2 pairs and 6 makes 3 pairs. Neither has a counter left over, so together they make 5 pairs and none is left over. The total, 10, is even.
Common mistakes: Counting 4 + 6 = 10 without looking at the pairs.; Writing odd.
Time for a middle child: about 5 min.

Investigation (page 5): Numbers next to each other

Easy first step: Add 3 + 4. Is the total odd or even?
Then: Add 5 + 6, 8 + 9 and 10 + 11 too. Write odd or even for each total. Is the total always odd, sometimes odd or never odd? Write what you notice.

> **Model answer: Always odd: 7, 11, 17, 21. One of the two numbers is odd and one is even, and odd + even is odd. Another way: a number plus the next number is a double plus 1, and a double has no counter left over, so one more is odd.**

Look for: A child who tries several pairs, records odd or even, and says always. Credit any clear reason: one number is odd and one is even, or it is a double and 1 more (from last lesson, if the child was there). Do not mark a child down for stopping at a few tests.
Common mistakes: Testing only one pair.; Starting with two odd numbers (they are not next to each other).

Talk and explain (minutes 71 to 77)

Ravi tests 3 + 5 and gets 8. He says: so odd + odd is always even. Is one test enough? What could we do to be more sure? Sentence starter: I think ... because ...

> **Model answer: One test is not enough. Another pair might give a different answer. We can test more pairs, and draw the pairs: each odd number has one counter left over, and the two left-over counters make a new pair, so odd + odd is always even.**

Look for: A child who says test more, or draws pairs. Not just "yes" or "no". Volunteers first, a pass is always fine, never call a child by name to answer, no tallies.

Exit ticket (minutes 77 to 83): 3 questions

E1 **Is 17 odd or even? Circle Odd or Even.**
17 is

> **Answer: Odd**

Worked solution: 17 makes 8 pairs and 1 counter is left over. The last digit is 7: odd.
Common mistakes: Choosing Even because 17 is a big number.; Looking at the tens digit.

E2 **Which number is even? Write its number in the bracket.**

> **Answer: (3) 18**

Worked solution: 9, 13 and 21 end in odd digits. 18 ends in 8: even.
Common mistakes: Choosing 21.; Choosing the first option.

E3 **Can you make 14 by adding two odd numbers? Circle Yes or No.**
14

> **Answer: Yes**

Worked solution: 7 + 7 = 14 (also 5 + 9). 14 is even, and odd plus odd is even.
Common mistakes: Saying No because 14 is even.; Not trying 7 + 7.

Look-back (minutes 83 to 86)

Children tick or write: *Something I did well*; *The hardest part was* (telling odd from even; testing the sums; always, sometimes or never; drawing the pairs (Go further); something else); *What helped me* (counters in pairs; drawing it; trying again; I asked for help; I was not stuck); *Next time I will try* (drawing it; using objects; checking my answer; asking a question); *I am still stuck (my grown-up will photograph this page for my tutor)* and *I would like to pass*. Never collected or read out in front of the group. A child who ticks still stuck gets a check-in in the open session next lesson.

5. Home practice and online practice

#	Tier	Question	Answer
H1	Start here	Pair up counters. Write Odd or Even. (a) 8 ___ (b) 15 ___ (c) 20 ___	Even, Odd, Even
H2	Start here	Ali has 13 counters. He puts them in pairs. How many counters are left over? ___ counter is left over.	1
H3	Start here	Fill in the missing numbers. The last digits of even numbers are 0, 2, 4, [] and [].	6, 8
H4	Think harder	Add. Circle Odd or Even for the total. (a) 5 + 6 = ___ Odd or Even (b) 7 + 9 = ___ Odd or Even	11 odd; 16 even
H5	Go further	Write two odd numbers that add to 20. Write two odd numbers that add to 30. Many answers are right. ___ + ___ = 20 ___ + ___ = 30	Any two odd numbers: for example 9 + 11 = 20 and 15 + 15 = 30 (the same number twice is fine)

Online practice (`out/l14/practice`, key `t2l14`): 14 items; 10 have a template that makes unlimited similar questions with a computed answer. Every template variant is checked by the validator against a brute-force oracle and the runner's own JavaScript. No timers, no scores, no streaks.

6. Parent line for the term report

Your child is learning to test a claim with examples and to say why a pattern works. This week: odd and even numbers, and adding odd and even numbers.

Term line (plan, section 5): Your child is learning to draw a story, to use groups and sharing, and to test a claim with an example. Add one named strength and one next step from your own observation. No marks, no ranking, no claim of exam results.

7. Slide list

#	Time	Slide	On screen	Speaker note
1	0–2	**Odd + Odd?** s-title	TODAY WE WILL: / Test a claim like a detective.	Lesson 4 of Term 2, 90 minutes. Objective: sort numbers into odd and even by pairing, test claims about adding odd and even numbers, and use a picture of pairs to see why odd + odd is always even. This whole lesson goes beyond the school Primary 1 syllabus on purpose. Time plan: opening 0 to 2, warm-up 2 to 8, sneak-peek 8 to 12, explore 12 to 26, mini-lesson 26 to 39, brain break 39 to 43, workbook 43 to 71, talk 71 to 77, exit ticket 77 to 83, look-back 83 to 86, flex time and goodbye 86 to 90 (the buffer: do not start anything new). Think harder, Go further and the Investigation are for every child to choose. Say the recording notice in one line: you and the screen only; a child may keep the camera off.
2	2–8	**Warm-up: make pairs** s-rem1	Show it on your fingers / [picture: array] / 8 counters / [picture: array] / 5 counters / Is one counter left over? Flat hand for none, 1 finger for one. / 8 5 10 7	Counters in pairs. Count the pairs and look for the red ring: one counter left over. Ask 8 (none left over), 5 (one left over), 10 (none) and 7 (one). Children show a flat hand (none) or one finger (one). Hands on camera is fine. No writing, no marks. A new child can look at the ring in the picture. Do not say odd or even yet.
3	2–8	**Count in twos** s-rem2	[picture: hundred] / Count in twos: 2, 4, 6, 8 … / after 10 after 16 before 8	The shaded numbers are the numbers we say when we count in twos. Count together up to 20. Then ask: what comes after 10 (12), after 16 (18), before 8 (6). A child who is unsure touches each shaded number on the strip. No writing.
4	2–8	**The last digit** s-rem3	[picture: bundles 4 tens 7 ones] / The last digit of 47 is 7. It tells the ones. / 38 63 90	A bar is a ten and each square is a one. 47 is 4 bars and 7 squares. The last digit is the ones digit: 7. Ask: the last digit of 38 (8), 63 (3), 90 (0). A child who has not met tens and ones only needs to find the last digit by looking at the end of the number.
5	8–12	**Sneak-peek puzzles** s-sneak	Ideas we have not learnt yet. A guess is a great start. Nobody is marked. / PUZZLE 1: anyone can try: / Mei has 7 counters. She puts them in pairs. / How many counters are left over? / You may draw to help. / PUZZLE 2: think: / Ben has 5 counters. Mei has 7 counters. / They put all their counters together and make pairs. / Is one counter left over? Circle Yes or No. Then write or draw how you know.	Puzzle 1 (7 counters in pairs; 1 left over) is an access question: any child can try it by drawing. Puzzle 2 is a thinking question on the lesson's key idea: two left-over counters make a pair. Say: two sneak-peek puzzles, ideas we have not learnt yet; a guess is a great start and I do not know is welcome; nobody is marked. Children write on their own paper. Nobody holds paper to the camera. There is no private chat. Answers: 1; no (5 + 7 = 12, which is 6 pairs). Do not reveal puzzle 2 until Talk time. Do not write scores or keep a list.
6	12–26	**Explore: pair up** s-explore1	Take 6 counters. Put them in pairs. / Is one left over? / Take 7 counters. Put them in pairs. / Is one left over? / Try 8, 9 and 10.	Round 1, about 4 minutes. Objects first, no writing. Children pair 6 counters (none left over) and 7 counters (one left over). Name the words once: none left over is even, one left over is odd. Then 8 (even), 9 (odd), 10 (even). Children answer with a flat hand for even and one finger for odd. A child with few counters can draw dots two by two. The pictures with odd and even come on the next slide, after the children have answered.

7	12–26	**Explore: pair up** s-explore1-ans	Take 6 counters. Put them in pairs. / Is one left over? / Take 7 counters. Put them in pairs. / Is one left over? / Try 8, 9 and 10. / [picture: array] / 6: even / [picture: array] / 7: odd	Round 1, about 4 minutes. Objects first, no writing. Children pair 6 counters (none left over) and 7 counters (one left over). Name the words once: none left over is even, one left over is odd. Then 8 (even), 9 (odd), 10 (even). Children answer with a flat hand for even and one finger for odd. A child with few counters can draw dots two by two. The pictures with odd and even come on the next slide, after the children have answered. (answer shown after the children have answered)
8	12–26	**Sort the number cards** s-explore2	Lay out your cards 1 to 20. Make two piles: even on the left, odd on the right. / [picture: hundred] / Look at the last digits. What do you notice?	Round 2, about 5 minutes, main room. Children sort cards 1 to 10 first, pairing counters when unsure, then 11 to 20 if time. The strip is blank so children do not see the answer: the even numbers are 2, 4, 6, 8, 10, 12, 14, 16, 18, 20. Ask what they notice about the last digits: even numbers end in 0, 2, 4, 6, 8; odd numbers end in 1, 3, 5, 7, 9. Do not reveal the rule: let children say it.
9	12–26	**Be a detective: test the sums** s-explore3	3 + 5 3 + 4 4 + 6 / Build each sum with counters first.	Round 3, about 5 minutes. Claim from Mei: odd plus odd makes an odd number. Children build 3 and 5 in pairs, push them together: 8, even. Then odd plus even (3 + 4 = 7, odd) and even plus even (4 + 6 = 10, even). The table with the answers comes on the next slide, after the children have built each sum. Do not say always yet.
10	12–26	**Be a detective: test the sums** s-explore3-ans	3 + 5 3 + 4 4 + 6 / Sum | Make pairs. Odd or even? / 3 + 5 | 8: even / 3 + 4 | 7: odd / 4 + 6 | 10: even / Build each sum with counters first.	Round 3, about 5 minutes. Claim from Mei: odd plus odd makes an odd number. Children build 3 and 5 in pairs, push them together: 8, even. Then odd plus even (3 + 4 = 7, odd) and even plus even (4 + 6 = 10, even). The table with the answers comes on the next slide, after the children have built each sum. Do not say always yet. (answer shown after the children have answered)
11	12–26	**What did we notice?** s-explore4	Did odd + odd give an odd number? / What happened with odd + even? With even + even? / What could we test next?	Take one or two answers from volunteers. Key ideas: odd plus odd gave an even number in our test; odd plus even gave odd; even plus even gave even; one test is only one example, so test more. Repeat a child's answer in your own words so the recording picks it up.
12	26–39	**Odd and even** s-m1	[picture: array] / 6: even / [picture: array] / 7: odd	Even numbers make pairs with none left over; odd numbers have one left over. The last digit tells us at once: 0, 2, 4, 6, 8 are even; 1, 3, 5, 7, 9 are odd. Ask: is 57 odd or even (odd, last digit 7)? Also ask how do you know. Take one or two volunteers. The tens are made of pairs (ten is five pairs), so only the ones digit can leave one over. The rule table comes on the next slide.
13	26–39	**Odd and even** s-m1-ans	[picture: array] / 6: even / [picture: array] / 7: odd / Last digit | The number is / 0, 2, 4, 6, 8 | even / 1, 3, 5, 7, 9 | odd	Even numbers make pairs with none left over; odd numbers have one left over. The last digit tells us at once: 0, 2, 4, 6, 8 are even; 1, 3, 5, 7, 9 are odd. Ask: is 57 odd or even (odd, last digit 7)? Also ask how do you know. Take one or two volunteers. The tens are made of pairs (ten is five pairs), so only the ones digit can leave one over. The rule table comes on the next slide. (answer shown after the children have answered)
14	26–39	**Test a claim: odd + even** s-m2	CLAIM: / An odd number plus an even number is always odd. / Test | Total / 3 + 4 | 7 / 5 + 8 | 13 / 7 + 2 | 9	Test the claim with three sums: 3 + 4 = 7, 5 + 8 = 13, 7 + 2 = 9. All three totals are odd. Ask: does the claim work for all three? Yes. Three tests that work are good evidence but not a proof for every pair of numbers. The totals are read aloud; the children say odd or even.

15	26–39	**One test can show a claim is false** s-m3	CLAIM: / An odd number plus an odd number is odd. / Always, sometimes or never?	A new claim: odd plus odd is odd. Children test 3 + 5 = 8, which is even, so the claim is not always true; the working line is on the answer slide. One test that fails is enough to show that. Ask: is odd + odd always odd, sometimes odd or never odd? From our tests it looks never odd, but a few tests do not prove it. Say that a picture can show why. Answer so far: never odd (it was even each time we tried).
16	26–39	**One test can show a claim is false** s-m3-ans	CLAIM: / An odd number plus an odd number is odd. / 3 + 5 = 8. 8 is even. The claim is not always true. / Always, sometimes or never?	A new claim: odd plus odd is odd. Children test 3 + 5 = 8, which is even, so the claim is not always true; the working line is on the answer slide. One test that fails is enough to show that. Ask: is odd + odd always odd, sometimes odd or never odd? From our tests it looks never odd, but a few tests do not prove it. Say that a picture can show why. Answer so far: never odd (it was even each time we tried). (answer shown after the children have answered)
17	26–39	**Test a claim: even + even** s-m3b	CLAIM: / An even number plus an even number is always even. / 4 + 6 8 + 2 10 + 10	Test the third claim with three sums: 4 + 6 = 10, 8 + 2 = 10, 10 + 10 = 20. All are even. Ask: does the claim work for all three? Yes, for these three. It is good evidence, and the picture of pairs on the next slides will show why. The totals (10, 10, 20) are not shown: children work them out and say odd or even.
18	26–39	**Why? Draw the pairs** s-m4	[picture: array] / 3: 1 left over / [picture: array] / 5: 1 left over	Each odd number has one counter left over. When we put two odd numbers together, the two left-over counters make a new pair. So there is none left over: the total is even. This is true for any two odd numbers, not just 3 and 5. Children build 7 + 9 with counters: each has one left over, the two make a pair, 16 is 8 pairs. Let them say that it works for other odd numbers, then ask them to try one of their own. The conclusion line is on the answer slide.
19	26–39	**Why? Draw the pairs** s-m4-ans	[picture: array] / 3: 1 left over / [picture: array] / 5: 1 left over / The 2 left-over counters make a pair. So 3 + 5 has none left over: even.	Each odd number has one counter left over. When we put two odd numbers together, the two left-over counters make a new pair. So there is none left over: the total is even. This is true for any two odd numbers, not just 3 and 5. Children build 7 + 9 with counters: each has one left over, the two make a pair, 16 is 8 pairs. Let them say that it works for other odd numbers, then ask them to try one of their own. The conclusion line is on the answer slide. (answer shown after the children have answered)
20	26–39	**Your turn: odd or even?** s-m5	Write the total, then odd or even. / 4 + 9 6 + 8 7 + 5 12 + 3	Each child writes four totals and odd or even on their own paper. Walk the cameras. Do not ask children to hold boards up in front of the group. Answers: 4 + 9 = 13 odd (even + odd); 6 + 8 = 14 even; 7 + 5 = 12 even (odd + odd); 12 + 3 = 15 odd.
21	26–39	**Check: odd or even?** s-m5a	Sum | Total | Odd or even? / 4 + 9 | 13 | odd / 6 + 8 | 14 | even / 7 + 5 | 12 | even / 12 + 3 | 15 | odd	Answers: 13 odd, 14 even, 12 even, 15 odd. Read each answer aloud so a child watching the recording can mark their own work. Link back: 7 + 5 is odd + odd, which is even, and 4 + 9 is even + odd, which is odd.
22	39–43	**Clap or tap** s-break	I say a number. Even: clap twice. Odd: tap your knees once. / Say odd or even out loud. / Stand up. Sip some water.	Four minutes. Stand up on camera. Call 4, 7, 10, 13, 16, 19 (even, odd, even, odd, even, odd). Children clap softly twice for even and tap their knees once for odd, and say odd or even aloud together. No equipment, no stomping.
23	43–71	**Workbook page 1: Start here** s-ws1	Questions 1 to 3. Take your time. / questions S1, S2, S3	Read questions 1 to 3 aloud. Children work on their own; the tutor walks the cameras and asks how do you know. Wait 10 seconds before helping. After question 3 any child may choose to carry on or try Think harder. Question 2: children pair up counters. Question 3: they colour the numbers in 2s.

24	43–71	**Check page 1** s-ws1ans	answers S1, S2, S3	Read each answer aloud. Children tick their own answers with a tick. Never ask a child to show a wrong answer to the group. Answers: Q1 0 and 1; Q2 even, odd, even, odd; Q3 the last digit 0.
25	43–71	**Workbook page 2: Start here** s-ws2	Questions 4 to 6. Take your time. / questions S4, S5, S6	Read questions 4 to 6 aloud. Question 4 is a bracket answer; question 5 is a story with 11 children in pairs; question 6 is a True or False table. Children may use counters.
26	43–71	**Check page 2** s-ws2ans	answers S4, S5, S6	Read each answer aloud so a child watching the recording can mark their own work. Question 6: 6 is even (true), 9 is even (false), 15 is odd (true), 20 is odd (false). Never ask a child to show a wrong answer to the group.
27	43–71	**Choose your next page** s-choice	Page | What it is / Think harder (page 3) | Test claims with sums / Go further (page 4) | Draw why it works / Investigation (page 5) | Numbers next to each other / Check | Finish and check your own work / Everyone may choose. Not finished? Pages 3 to 5 are for home too.	Invite the whole group at once, for example: when you have finished Start here, you can choose Think harder, Go further or the Investigation. Never announce who is on which page and never name a child. Pairs are not split unless both children agree. Model answers are in the tutor guide. About 5 minutes.
28	71–77	**Talk and explain** s-talk	RAVI TESTS 3 + 5: / He gets 8. / He says: odd + odd is always even. / Is one test enough? What could we do to be more sure? / I think ... because ...	One minute of talk to the grown-up next to you, or to your screen. Then volunteers first; a pass is always fine; never call a child by name to answer. Model answer: one test is not enough, because another pair might give a different answer. Try more pairs, and draw the pairs: each odd number has one left over, and two left-over counters make a pair. Repeat each child's answer in your own words for the recording.
29	71–77	**Back to the sneak-peek** s-sneakans	[picture: array] / 5 / [picture: array] / 7 / No! The 2 left-over counters make a pair.	Reveal puzzle 2 now. Say: many of you wrote a good reason. Do not read out anyone's earlier answer. The pictures show 5 and 7 each with one left over. Together they make 12 counters, which is 6 pairs, so no counter is left over.
30	77–83	**Exit ticket** s-exit	On your own. No looking back. / questions E1, E2, E3	Children answer on page 5. Read E1, E2 and E3 aloud (the questions are on the slide). Children tick their own ticket against the next slide. Nobody holds paper to the camera and there is no private chat.
31	77–83	**Check the exit ticket** s-exitans	answers E1, E2, E3	Read each answer aloud. Children tick their own ticket with a tick. Answers: odd, option 3 (18), yes (7 + 7).
32	83–86	**Look-back** s-look	[look-back box]	Three minutes. Children tick or write the look-back box on page 5. A pass is always allowed. It is never marked, never collected in front of the group and never read out. If a child ticks I am still stuck, a grown-up may photograph that page after class and send it to the business WhatsApp (the number is in the parent summary, never on a slide). You then help in the open session next lesson. Never a direct message to a child. The Next time I will try row is optional.
33	86–90	**Well done, inquirers!** s-end	Show a grown-up one thing you found out today. / NEXT LESSON: / Equal Groups / Have ready: 4 plates or bowls, about 20 small things of one kind, pencil and paper.	Say goodbye and thank the grown-ups. Minutes 86 to 90 are flex time: the buffer. If you ran late, finish any open item (the look-back). Do not start anything new. If the whole class is ahead, show the optional slides and use the Spare-time menu from the tutor guide.
34	optional	**Go further: what if?** s-opt	Ali says he can make 15 by adding two odd numbers. Can he? / Try | Total / 7 + 7 | 14 / 5 + 9 | 14 / 7 + 9 | 16	Optional, only if you are on time. Answer: no. Two odd numbers always make an even total, and 15 is odd. The sums in the table are examples (14, 14, 16); none is 15. Take two answers and move on. The reason is the picture of pairs: the two left-over counters make a pair.

35	optional	**If we have time: pick one** s-menu	Activity | What we do / Is it always true? | Even + even is even. Test it three times. / Make a puzzle | Write three sums. Ask your grown-up: odd or even, before adding? / Teach it back | Show with pairs why 7 + 9 is even / Optional. Everyone may join.	Optional Spare-time menu, used only if the whole class is ahead. Pick one or two activities (3 to 5 minutes each); full tutor lines and answers are in the tutor guide. Never start new content and never name who is ahead. Slow down with how do you know rather than rushing on. These minutes come from the flex buffer and are not part of the 90-minute sum.

8. Recording cues and chapter markers

Say each cue once, to the camera, at the start of the part. Add a chapter marker at each time. A child watching alone cannot ask you a question, so say the page and question number aloud, read each question and each answer aloud, and repeat a child's answer in your own words.

Chapter	Part	You say (recording voice)	A child watching later
0:00	Opening	*If you are watching the recording: hello! Get a pencil, paper, your workbook, your kit page and counters. Pause or rewind any time.*	Gather your workbook, pencil, paper, kit pieces and small things. Press play when ready.
2:00	Remember warm-up	*Recording: join in! Show your answers on your fingers before I say them. Pause if you need longer.*	Play along. Show each answer on your fingers before the video does.
8:00	Sneak-peek puzzles	*Recording: pause now and try both puzzles on your paper. Guessing is fine. Press play for the next part.*	Pause. Try both puzzles on your own paper. A guess is fine.
12:00	Explore	*Recording: pause now. Make pairs with your counters. Sort your number cards. Test the sums. Press play when you have tried.*	Pause. Pair your counters for each number, sort your cards, and test the sums I show.
26:00	Mini-lesson	*Recording: keep watching and copy the examples. Rewind if you miss a step.*	Watch and copy the examples. Rewind any step you missed.
39:00	Brain break	*Recording: stand up and join in! Clap for an even number, tap your knees for an odd number.*	Stand up. Clap for an even number and tap your knees for an odd number.
43:00	Workbook	*Recording: pause now and do workbook page 1. When you finish a page, press play to check it.*	Pause. Do page 1, then play to check. Then page 2. Then choose a page to try.
71:00	Talk time	*Recording: pause. Tell a grown-up who is right, and show them with counters.*	Pause. Explain your answer to someone at home, with counters and a reason.
77:00	Exit ticket	*Recording: pause and do the exit ticket on your own. Then press play to check it.*	Pause. Do the exit ticket alone, then play to check it.
83:00	Look-back	*Recording: pause and fill in your look-back box. You can pass.*	Pause. Fill in the look-back box, or pass.
86:00	Flex time and goodbye	*Recording: well done for finishing! Show a grown-up one thing you found out.*	Show a grown-up your workbook and tell them one thing you found out.

9. Timing check (model, not a stopwatch)

Part	Allocated	Script	Slow class	Flag
opening	2:00	1:30	1:42	ok
remember	6:00	4:32	5:22	ok
sneak	4:00	3:06	3:37	ok
explore	14:00	11:39	13:49	ok

mini	13:00	10:47	12:45	ok
break	4:00	3:17	3:54	ok
work	28:00	22:34	26:54	ok
talk	6:00	4:55	5:50	ok
exit	6:00	5:01	5:56	ok
look	3:00	2:23	2:48	ok
flex	4:00	0:41	0:48	ok
Total	90:00	70:25	83:25	

Assumptions as docs/audit/timing_p1.md: speech 120 words a minute, read-aloud 110, slide change 25 s, a group question 10 s thinking plus 20 s answers, papers to the camera 30 s. Workbook: Start here has 6 questions; a middle child needs about 7.5 min for page 1 and 6.5 min for page 2 (a slower child about 1.7 times as long, so may finish page 1 and part of page 2; that is fine, the check-together slides cover every answer). The lesson has no breakout rooms, so no breakout time is counted.
