Measure It!

Lesson 10
Challenge Day

Tutor: _____ Program dates: _____

COUNT WITH THE FROG!

Name _____ Group _____ Date _____

When you finish this page you may choose: carry on, or try **Think harder**.

Look for the pattern. Fill in the missing numbers. Your number strip is in the kit at the back.

No.1

Skip counting. Fill in the blanks.

a Counting in 2s: 2, 4, 6, _____, _____, 12, _____, 16

b Counting in 5s: 5, 10, _____, 20, _____, 30, _____

c Counting in 3s: 3, 6, _____, 12, _____, 18

No.2

What is the rule? Fill in the rule and the next two numbers.

a 4, 7, 10, 13, _____, _____ Rule: _____

b 30, 27, 24, 21, _____, _____ Rule: _____

c 2, 6, 10, 14, _____, _____ Rule: _____

No.3

A frog starts at 0 and hops 4 steps each time. Colour the numbers where the frog lands.

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

a A second frog also starts at 0 but hops 5 steps each time. Mark its landing numbers with a cross (X) above the number line.

b Besides 0, which number do BOTH frogs land on?

Answer: _____

No.4

Ali counts in 2s from 2 up to 30. Mei counts in 5s from 5 up to 30. Write both lists first.

a Which numbers will BOTH of them say?

Answer: _____

b What do you notice about these numbers?

.....

.....

No.5

Mei puts stickers in boxes. Box 1 has 2 stickers. Each box after it has 3 more stickers than the box before.

Box	1	2	3	4	5	6	7	8	9	10
Stickers	2	5								

a Fill in the table. How many stickers are in Box 10?

Answer: _____

b Look at the numbers of stickers. Are they odd or even? What pattern do you see?

.....

.....

Investigation: What if we change the hops?

Choose this any time you like. You do not have to finish it.

Easy first step: Frog 1 hops in 2s from 0. Frog 2 hops in 3s from 0. Write the numbers up to 30 that BOTH frogs land on.

Then: Now change frog 2 to hops of 4, then 5, then 6, and do it again each time. What stays the same? What changes?

Look-back Two minutes. There are no right answers. You can pass. Nobody reads it out.

Something I did well: .....

The hardest part was ... ☐ the hops ☐ finding the rule ☐ saying why

☐ something else: .....

What helped me: ☐ counters or objects ☐ drawing it ☐ trying again

☐ I asked for help ☐ I was not stuck

☐ I am still stuck (my tutor will look at this after class)

☐ I would like to pass

Story corner: Julia Robinson Just for fun. You can pass.

Julia Robinson (USA, 1919–1985) loved the counting numbers, and as a small child she liked arranging pebbles. She grew up to be a mathematician who worked on hard number puzzles.

Try it: Julia puts pebbles in rows. Row 1 has 3 pebbles, row 2 has 6, row 3 has 9. How many pebbles are in row 5? What is the rule?

My answer: .....

Think harder

Name _____ Group _____ Date _____

Use objects, draw a picture or make a table. Then write how you know. Choose any question you like, in any order.

Think harder

No.T1

Fill in the missing numbers: 3, 8, ___, 18, ___, 28

No.T2

Fill in the missing numbers: 40, ___, 28, ___, 16, 10

No.T3

Is 30 in the pattern 4, 8, 12, 16 ... ? How do you know?

No.T4

Ali counts in 2s from 2 up to 50. Mei counts in 5s from 5 up to 50. Which numbers do both of them say? What do you notice?

Go further

No.C1

1, 2, 4, 7, 11, 16 ... What is the 8th number? Explain how the pattern grows.

No.C2

Ali counts up from 2 in 3s. Mei counts up from 1 in 4s. Which numbers up to 50 are in both patterns? What do you notice about the gaps between them?

No.C3

Make up your own two counting patterns: choose a start and a jump for each, so that they share some numbers up to 50. Write both patterns and ring the shared numbers. What do you notice about the gaps between the shared numbers?

NUMBER BOND INQUIRY

Name _____ Group _____ Date _____

When you finish this page you may choose: carry on, or try **Think harder**.

No.1

Number bonds of 10. Fill in the blanks.

10 = 3 + _____	10 = _____ + 6	10 = 8 + _____	10 = _____ + 5	10 = 0 + _____

No.2

List the pairs that make 10, from the smallest first number.

a 0 + 10, 1 + 9, 2 + _____, 3 + _____, 4 + _____, 5 + _____

b When the first number goes up by 1, what happens to the second number?

c How many different pairs make 10 if 3 + 7 and 7 + 3 count as the SAME pair?

Answer: _____

No.3

Use bonds of 10 to help you with bonds of 20.

a 6 + 4 = 10, so 16 + 4 = _____ and 6 + 14 = _____

b 7 + 3 = 10, so 17 + 3 = _____ and 7 + 13 = _____

c 20 = 12 + _____ 20 = _____ + 9 20 = 15 + _____

No.4

The = sign means "is the same as". Use counters or draw dots to make both sides the same. Fill in the blanks.

a 5 + 3 = 4 + _____ (b) 7 + _____ = 9 + 2

c 3 + 8 = _____ + 5 (d) 6 + 6 = 10 + _____

e Mei says "4 + 4 = 8 + 1 is true." Is she right? Explain.

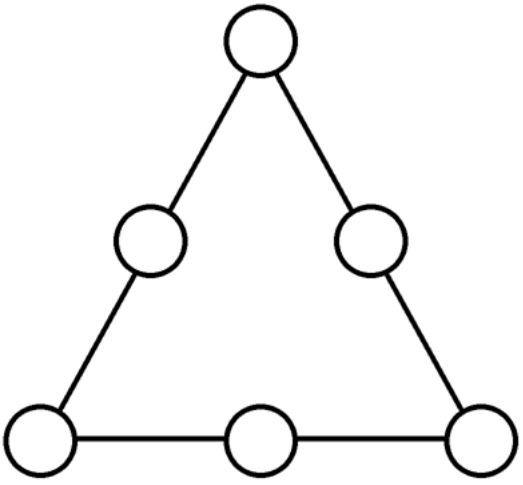

.....

.....

No.5

Magic triangle. Put the numbers 1, 2, 3, 4, 5 and 6 in the circles so that each side of the triangle adds up to 9.

Hint: every corner counts in two sides. For a small total, use small numbers in the corners.

a Which numbers did you put in the corners? _____

b If you have time: now make each side add up to 10. Which numbers are in the corners this time? _____

No.6

Two numbers add up to 10. One is 2 more than the other. What are the numbers?

Answer: _____

If you have time: two numbers add up to 12. One is 4 more than the other. What are they?

_____

Investigation: Is it always true?

Choose this any time you like. You do not have to finish it.

Easy first step: Write all the pairs that make 10, from 0 + 10 and 1 + 9 down to 10 + 0. Look at each pair. Are both numbers odd, both even, or one of each?

Then: Mei says: "When two numbers make 10, they are both odd or both even." Is Mei always right? Now test the pairs that make 20. Why do you think it works?

Look-back Two minutes. There are no right answers. You can pass. Nobody reads it out.

Something I did well: .....

The hardest part was ... ☐ the bonds ☐ the = sign ☐ saying why

☐ something else: .....

What helped me: ☐ counters or objects ☐ drawing it ☐ trying again

☐ I asked for help ☐ I was not stuck

☐ I am still stuck (my tutor will look at this after class)

☐ I would like to pass

Story corner: Robert Recorde Just for fun. You can pass.

Robert Recorde (Wales, about 1510–1558) was a doctor who wrote maths books. In 1557 he used the sign = for the first time in a book, because no two things can be more equal than two straight lines of the same length.

Try it: Use Recorde's sign. Fill in the missing number so that both sides are equal: 4 + 4 = 5 + __

My answer: .....

Think harder

Name _____ Group _____ Date _____

Use objects, draw a picture or make a table. Then write how you know. Choose any question you like, in any order.

Think harder

No.T1

5 + 4 = 6 + ___

No.T2

9 + 6 = ___ + 10

No.T3

6 + 4 = 10, so 16 + 4 = ___ and 26 + 4 = ___

No.T4

Find all the pairs of numbers from 1 to 11 that make 12. (3 + 9 and 9 + 3 count as the same pair.) How many pairs are there?

Go further

No.C1

Put 1 to 6 in the magic triangle so each side adds to 11. What goes in the corners and middles?

No.C2

Ali has 20 stickers. He keeps 9 and shares the rest between Ben and Mei. Ben gets 3 more than Mei. How many does each get?

No.C3

Change the magic triangle: use the numbers 2, 3, 4, 5, 6 and 7 instead of 1 to 6. Can you make every side add to the same total? Try it. Which totals can you make?

LET'S PLAN THE FRUIT PARTY!

Name _____ Group _____ Date _____

When you finish this page you may choose: carry on, or try **Think harder**.

Our teacher wants to buy fruit for a class party. Every child voted for ONE fruit. The picture graph shows the votes.

Key: ● = 1 child

Fruit	Votes
Apple	●●●●●●
Banana	●●●●●
Orange	●●●●●●●●●
Grape	●●●
Watermelon	●●●●●

Part A: Read the graph

No.1

Which fruit got the most votes?

Answer: _____

No.2

Which fruit got the fewest votes?

Answer: _____

No.3

How many more children chose orange than grape?

Answer: _____

No.4

Two fruits got the same number of votes. Which two fruits are they?

Answer: _____

No.5

How many children voted altogether? (Hint: each child had only 1 vote.)

Answer: _____

No.6

Mei says, "Orange is the best fruit for the whole school!"

a Is Mei right? **Yes / No**

b Why do you think so?

.....

No.7

What else should the teacher think about before buying fruit for the party?

.....

.....

Part B: Now it's your turn!

Ask your own group to vote. Each child votes for ONE fruit. Make a tally mark for each vote.

Fruit	Tally	Total
Apple		
Banana		
Orange		
Grape		
Watermelon		

No.8

Which fruit did YOUR group like best? _____ Is it the same as the graph above? Yes / No

No.9

Why might two groups choose different fruits?

.....

Investigation: What if we change the key?

Choose this any time you like. You do not have to finish it.

Easy first step: Draw a picture graph with 1 picture = 1 child: Cats 4, Dogs 6, Fish 2.

Then: Now draw it again with 1 picture = 2 children. What stays the same? What changes? Could you use 1 picture = 3 children? Why or why not?

Look-back Two minutes. There are no right answers. You can pass. Nobody reads it out.

Something I did well: .....

The hardest part was … ☐ reading the key ☐ comparing ☐ saying why

☐ something else: .....

What helped me: ☐ counters or objects ☐ drawing it ☐ trying again

☐ I asked for help ☐ I was not stuck

☐ I am still stuck (my tutor will look at this after class)

☐ I would like to pass

Story corner: Marie Neurath Just for fun. You can pass.

Marie Neurath (Germany, 1898–1986) helped make Isotype, a way of showing numbers with little pictures. More of something means more pictures, all the same size.

Try it: Marie draws one small apple picture for each child who chose apples. 6 children chose apples and 4 chose pears. How many apple pictures does she draw? How many more apple pictures than pear pictures?

My answer: .....

Think harder

Name _____ Group _____ Date _____

Use objects, draw a picture or make a table. Then write how you know. Choose any question you like, in any order.

Think harder

No.T1

1 picture = 2 children. Red has 3 pictures, blue has 5 and green has 4. How many children chose blue?

No.T2

1 picture = 2 children. Red has 3 pictures, blue has 5 and green has 4. How many children voted altogether?

No.T3

1 picture = 2 children. Six children chose pizza. How many pictures should we draw?

No.T4

1 picture = 2 children. A half picture means 1 child. Apple has 3 pictures and a half. How many children chose apple?

Go further

No.C1

24 children voted for three fruits: apple, banana and orange. Apple got 6 votes. Orange got 6 more votes than banana. How many votes did banana and orange get?

No.C2

1 picture = 2 children. 20 children voted for three fruits. A has 3 pictures. B has 2 more pictures than A. How many children chose C?

No.C3

Make up your own: 15 children vote for three fruits. Draw a picture graph where banana wins by exactly 2 votes (banana has 2 more than the fruit in second place) and no two fruits are tied. Then try to find a second graph that works.

PATTERN INQUIRY

Name _____ Group _____ Date _____

When you finish this page you may choose: carry on, or try **Think harder**.

No.1

Look at the shape pattern. Draw the missing shapes in places 8 and 9.

1 2 3 4 5 6 7 8 9

No.2

The pattern keeps going in the same way.

a What shape will be in place 10? _____

b What shape will be in place 12? _____

c What shape will be in place 30? (Keep drawing, or look for a shortcut.)

_____

d How do you know?

.....

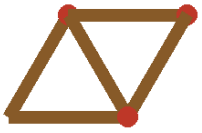

.....

No.3

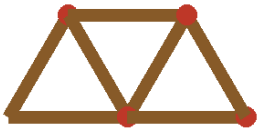

Ben makes a row of triangles with sticks.

1 triangle

2 triangles

3 triangles

a Count the sticks. Fill in the table. Keep going until you reach 10 triangles.

Triangles	1	2	3	4	5	6	7	8	9	10
Sticks	3	5	7							

b Each time Ben adds 1 more triangle, how many more sticks does he need?

Answer: _____

c Why does he need only that many more sticks? (Look at the picture.)

.....

.....

d How many sticks are needed for 10 triangles?

Answer: _____

No.4

If you have time: Ben has 15 sticks. How many triangles in a row can he make?

Answer: _____

Show how you worked it out:

.....

.....

Investigation: Is it always true?

Choose this any time you like. You do not have to finish it.

Easy first step: Draw your own pattern of 3 shapes that repeats (for example circle, square, triangle, circle, square, triangle ...) up to place 9.

Then: Mei says: "In a pattern that repeats every 3 shapes, place 30 is the same shape as place 3." Test Mei on places 6 and 9, then on place 30. Is she always right? What about a pattern that repeats every 4 shapes: which places match place 4?

Look-back Two minutes. There are no right answers. You can pass. Nobody reads it out.

Something I did well: .....

The hardest part was ... ☐ the core ☐ the 30th place ☐ the sticks

☐ something else: .....

What helped me: ☐ counters or objects ☐ drawing it ☐ trying again

☐ I asked for help ☐ I was not stuck

☐ I am still stuck (my tutor will look at this after class)

☐ I would like to pass

Story corner: Ingrid Daubechies Just for fun. You can pass.

Ingrid Daubechies (Belgium, born 1954) liked weaving as a girl. When she could not sleep she doubled numbers in her head: 2, 4, 8, 16 and on. Now she is a maths professor.

Try it: Try Ingrid's doubling game: 1, 2, 4, 8, ___, ___. What is the rule? What are the next two numbers?

My answer: .....

Think harder

Name _____ Group _____ Date _____

Use objects, draw a picture or make a table. Then write how you know. Choose any question you like, in any order.

Think harder

No.T1

Pattern: circle, triangle, triangle, square, circle, triangle, triangle, square ... What is the 14th shape?

No.T2

Same pattern: how many triangles are in the first 20 shapes?

No.T3

Red, blue, blue, red, blue, blue ... What colour is the 20th bead?

No.T4

Squares in a row need 4, 7, 10, ... sticks. With 20 sticks, how many squares can you make? How many sticks are left over?

Go further

No.C1

Beads repeat in a pattern of 5: red, red, blue, blue, green. How many green beads are in the first 47 beads?

No.C2

Dots: 1, 3, 6, 10, 15 ... What are the next two numbers? What is the 10th number?

No.C3

Make up your own repeating pattern with a core of 5 beads (use up to 3 colours). Ask a partner: what colour is the 33rd bead? Write the answer and how you know.

MYSTERY NUMBER

Name _____ Group _____ Date _____

When you finish this page you may choose: carry on, or try **Think harder**.

To find a mystery number, work backwards. Do the opposite steps in the opposite order.

No.1

I think of a number. Find my number and write it in the yellow box.

a I add 5. I get 12.

?	→	+ 5	→	**12**

b I take away 3. I get 9.

?	→	– 3	→	**9**

c I add 4. Then I take away 2. I get 10.

?	→	+ 4	→	– 2	→	**10**

No.2

A number machine adds the same number every time.

a The machine adds 6. Fill in the table.

IN	2	5	9	
OUT	8	11		14

b A different machine. What does it do to every number?

IN	3	6	10	15
OUT	7	10	14	

Rule: _____ If OUT is 30, then IN is _____

No.3

Ali has 8 marbles. Mei has 5 more marbles than Ali.

a How many marbles does Mei have? _____

Ben has 6 fewer marbles than Mei.

b How many marbles does Ben have? _____

c How many more marbles does Mei have than Ben? _____

d If you have time: how many marbles do they have altogether? _____

Colour one box for each marble to help you. Ali's bar is done for you.

Ali														
Mei														
Ben														

No.4

Queue puzzles.

a There are 20 children in a queue. Mei is 7th from the front. How many children are behind her?

Answer: _____

b Ali is 3rd from the front AND 3rd from the back. How many children are in the queue? Draw the children as circles first.

Answer: _____

No.5

Make your own mystery number story. Give it to a friend to solve!

Investigation: Is it always true?

Choose this any time you like. You do not have to finish it.

Easy first step: A number machine adds 6 and then takes away 6. Try IN = 3, 10 and 25. What comes OUT each time?

Then: Mei says: "OUT is always the same as IN." Test one number you choose. Is Mei always right? Now change the machine: add 6, then take away 4. What happens to every number? Why?

Look-back Two minutes. There are no right answers. You can pass. Nobody reads it out.

Something I did well: .....

The hardest part was ... ☐ the machine ☐ undoing the steps ☐ the queue

☐ something else: .....

What helped me: ☐ counters or objects ☐ drawing it ☐ trying again

☐ I asked for help ☐ I was not stuck

☐ I am still stuck (my tutor will look at this after class)

☐ I would like to pass

Story corner: René Descartes Just for fun. You can pass.

René Descartes (France, 1596-1650) wrote a book in 1637 that used x, y and z for numbers we do not know yet. We still call a mystery number x.

Try it: Call the mystery number x. x + 8 = 14. Work backwards: what is x?

My answer: .....

Think harder

Name _____ Group _____ Date _____

Use objects, draw a picture or make a table. Then write how you know. Choose any question you like, in any order.

Think harder

No.T1

Ben had some marbles. He gave 5 to Mei, then won 3. Now he has 12. How many did he start with?

No.T2

Ben had some stickers. He gave away 6, got 4, then gave away 3. Now he has 10. How many did he have at first?

No.T3

A number machine adds the same number each time. IN 4 gives OUT 9. What is the rule? What is OUT when IN is 12? What is IN when OUT is 20?

No.T4

I think of a number. I add 4, then I take away 7. I get 8. What is my number?

Go further

No.C1

A number machine has two steps: add 3, then add 4. IN 5 gives OUT 12. What goes IN to give OUT 20? Can you make a one-step machine that does the same job?

No.C2

A snail climbs 3 cm each day and slides back 1 cm each night. It starts at the bottom of a 9 cm wall. On which day does it reach the top?

No.C3

Make up a mystery number story with THREE steps whose answer is 10. Write the story. Show how a partner can work backwards to find 10, and how they can check by going forwards.

COIN COMBOS

Name _____ Group _____ Date _____

When you finish this page you may choose: carry on, or try **Think harder**.

We have 5¢, 10¢, 20¢ and 50¢ coins. You can use the same kind of coin more than once.

No.1

Show different ways to make exactly 20¢ using only 20¢, 10¢ and 5¢ coins. Write how many of each coin in the table.

Way	Number of 20¢	Number of 10¢	Number of 5¢
A			
B			
C			
D			
E			

You may not need every row.

a Which way uses the FEWEST coins?

Answer: _____

b Which way uses the MOST coins?

Answer: _____

c How do you know you have found ALL the ways?

No.2

Find ALL the ways to make 25¢ using 20¢, 10¢ and 5¢ coins. Start with the biggest coin. Write each way like this: 20¢ + 5¢ (Hint: there are 4 ways.)

No.3

Mei wants to pay exactly 85¢ using 5¢, 10¢, 20¢ and 50¢ coins.

a What is the smallest number of coins she can use? Which coins are they?

Answer: _____

b If you have time: find a different way that uses exactly 6 coins.

Answer: _____

No.4

Can Ben make 35¢ using only 2 coins? Explain your answer.

.....

.....

Investigation: What if we take a coin away?

Choose this any time you like. You do not have to finish it.

Easy first step: Our coins are 5¢, 10¢, 20¢ and 50¢. Put the 5¢ coin away. Use your coins to make 10¢, then 20¢, then 15¢.

Then: Which amounts from 5¢ to 50¢ (5¢, 10¢, 15¢ … 50¢) can you NOT make with the 10¢, 20¢ and 50¢ coins? What do those amounts have in common? Why?

Look-back Two minutes. There are no right answers. You can pass. Nobody reads it out.

Something I did well: .....

The hardest part was … ☐ finding all the ways ☐ knowing I had them all ☐ the coins ☐ something else: .....

What helped me: ☐ counters or objects ☐ drawing it ☐ trying again ☐ I asked for help ☐ I was not stuck ☐ I am still stuck (my tutor will look at this after class) ☐ I would like to pass

Story corner: Isaac Newton Just for fun. You can pass.

Isaac Newton (England, 1642–1727) is famous for science, but he also worked at the Royal Mint, where English coins were made. The Mint cared that every coin had the right weight.

Try it: You have one 10-cent coin and some 5-cent coins. You want 20 cents. How many 5-cent coins do you need?

My answer: .....

Think harder

Name _____ Group _____ Date _____

Think harder

No.T1

Make 70¢ using exactly 4 coins from 5¢, 10¢, 20¢ and 50¢. Find every set.

No.T2

Sam has only 10¢ and 20¢ coins. He pays exactly 90¢ using 6 coins. How many of each coin does he use?

No.T3

What is the fewest number of coins to make 45¢?

No.T4

Find ALL the ways to make 30¢ using 20¢, 10¢ and 5¢ coins. How do you know you have found them all?

No.T5

Dollars! We also have $1 coins and $2, $5, $10 and $50 notes.

a A toy costs $17. Pay exactly with the fewest notes and coins.

b Mei has one $50 note and two $10 notes. A bicycle costs $65 and a helmet costs $8. Does she have enough money for both? Explain.

Go further

No.C1

You have one 5¢, one 10¢, one 20¢ and one 50¢ coin. How many different amounts can you make using any of them? What if you also had a $1 coin (100¢)?

No.C2

A sweet costs 15¢ and a biscuit costs 20¢. Ben spends exactly 90¢ and buys some of each. How many sweets and biscuits does he buy?

No.C3

Make up your own coin puzzle that has exactly ONE answer (for example: "exactly 3 coins that make 35¢"). Write it, swap with a partner and check their answer by listing every possibility.

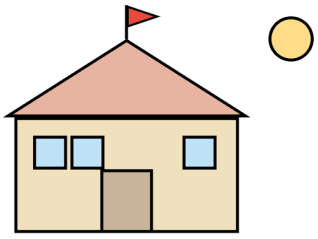

SHAPE SAFARI

Name _____ Group _____ Date _____

When you finish this page you may choose: carry on, or try **Think harder**.

No.1

Count the shapes in the house picture.

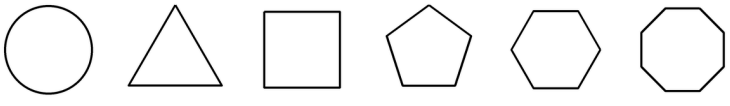

Circle	Triangle	Square	Rectangle

a Which shape is there the most of? _____ (b) How many shapes altogether? _____

No.2

Sides and corners. Look at the shapes, then fill in the table.

circle triangle square pentagon hexagon octagon

Shape	Straight sides	Corners
Circle	0	0
Triangle	3	3
Square		
Pentagon		
Hexagon		
Octagon		

a What do you notice about the number of sides and corners?

_____

b A shape has 7 sides. How many corners does it have? _____

No.3

Who am I?

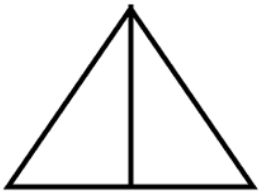

a I have 4 sides, all the same length, and 4 square corners. _____

b I have no corners and no straight sides. _____

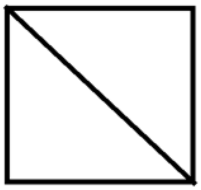

c I have 3 sides and 3 corners. _____

No.4

How many triangles can you find in each picture? Count the small ones first, then the bigger ones.

A

B

A: _____ **B:** _____

No.5

Two triangles of the same size are put together along one side. Draw one shape you can make. What is it called?

.....

.....

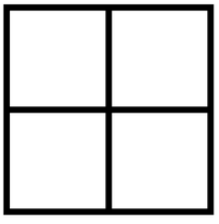

.....

.....

Shape name: _____

No.6

How many squares can you find in this picture? Count the small ones first, then the bigger one.

Number of squares: _____

Investigation: Find all the shapes

Choose this any time you like. You do not have to finish it.

Easy first step: Join 3 squares so that whole sides touch. Draw one shape you can make.

Then: How many different shapes can you make with 3 squares? Turning or flipping a shape does not make a new one. Draw each shape. Then try with 4 squares. Use paper squares or counters to help.

Look-back Two minutes. There are no right answers. You can pass. Nobody reads it out.

Something I did well: .....

The hardest part was ... ☐ sides and corners ☐ counting triangles ☐ naming shapes ☐ something else: .....

What helped me: ☐ counters or objects ☐ drawing it ☐ trying again ☐ I asked for help ☐ I was not stuck ☐ I am still stuck (my tutor will look at this after class) ☐ I would like to pass

Story corner: Johannes Kepler Just for fun. You can pass.

Johannes Kepler (Germany, 1571-1630) was an astronomer. In 1611 he noticed that snowflakes have six corners and asked why.

Try it: Kepler's snowflake has six corners. What shape has 6 straight sides and 6 corners? How many sides do two of these shapes have altogether?

My answer: .....

Think harder

Name _____ Group _____ Date _____

Use objects, draw a picture or make a table. Then write how you know. Choose any question you like, in any order.

Think harder

No.T1

Two same-size triangles can make a square. Can they also make a bigger triangle? Draw how.

No.T2

How many squares are in a grid 3 squares long and 2 squares high?

No.T3

Three squares are joined in a row to make a long rectangle. How many rectangles can you find altogether? (A square counts as a rectangle.)

No.T4

Draw a shape with 4 straight sides that is NOT a square. Is it a rectangle? How do you know?

Go further

No.C1

A triangle has 4 lines drawn from the top corner to the bottom. How many triangles are there? Follow the pattern 3, 6, 10 ... What would 5 lines give?

No.C2

A square is cut into 4 equal squares. One of the small squares is cut into 4 even smaller squares. How many squares can you find altogether?

No.C3

Draw your own triangle-counting puzzle: a big triangle with some lines inside. Count the triangles. Swap with a partner. Do you both get the same number? If not, find out who missed some.

LOGIC LAB

Name _____ Group _____ Date _____

When you finish this page you may choose: carry on, or try **Think harder**.

No.1

Put them in order using the clues.

a Ali is taller than Ben. Ben is taller than Mei. Tallest: _____ Shortest: _____

b The cat is heavier than the dog. The hen is lighter than the dog. Heaviest: _____ Lightest: _____

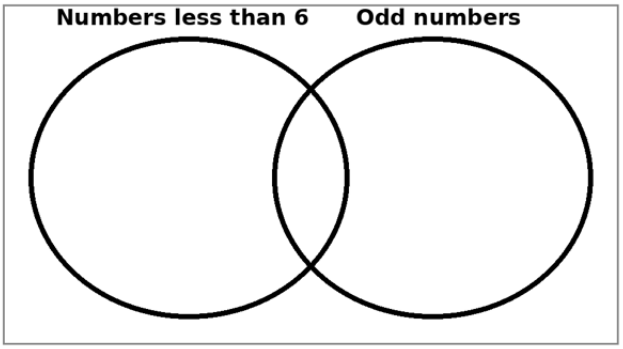

c The red ribbon is longer than the blue one.
The green one is shorter than the blue one.
The yellow one is longer than the red one.
Write them from longest to shortest:

_____, _____, _____, _____

No.2

Write each number from 1 to 10 in the right place in the two-loop picture.

Odd numbers end in 1, 3, 5, 7 or 9. **Even** numbers end in 0, 2, 4, 6 or 8.

a Numbers that are in BOTH circles: _____

b Why do those numbers belong in the middle?

No.3

Who has which pet? Ali, Mei and Ben each have a different pet: a cat, a dog or a fish.

Clue 1: Ali does not have a cat or a dog.

Clue 2: Mei does not have a dog.

Put a tick where it fits and a cross where it cannot. We crossed two boxes for you because of Clue 1.

	Cat	Dog	Fish
Ali	✕	✕	
Mei			
Ben			

Ali has the _____. Mei has the _____. Ben has the _____.

No.4

Four children stand in a line: Ali, Ben, Mei and Sam.

Mei is first. Ali is in front of Ben. Ben is in front of Sam. Where does each child stand?

1st	2nd	3rd	4th

No.5

If you have time: number riddles. Who am I?

a I am between 10 and 20. I am odd. When you count in 5s, you say me. _____

No.6

If you have time: which one does NOT belong? 3, 6, 9, 11

Explain why. Then try to find a second reason!

Investigation: Find all the ways

Choose this any time you like. You do not have to finish it.

Easy first step: Ali, Mei and Ben stand in a line. Write one order they can stand in. Now write a different order.

Then: Write ALL the different orders they can stand in. How do you know you have them all? Now add a clue: "Ali is not first." How many orders are left? Make up your own clue so that only ONE order is left.

Look-back Two minutes. There are no right answers. You can pass. Nobody reads it out.

Something I did well: .....

The hardest part was ... ☐ the grid ☐ the two-loop picture ☐ the clues

☐ something else: .....

What helped me: ☐ counters or objects ☐ drawing it ☐ trying again

☐ I asked for help ☐ I was not stuck

☐ I am still stuck (my tutor will look at this after class)

☐ I would like to pass

Story corner: Leonhard Euler Just for fun. You can pass.

Leonhard Euler (Switzerland, 1707–1783) drew circles in his letters to show groups. A small circle inside a big circle is a smaller group inside a bigger one.

Try it: Draw a big circle for animals and a small circle inside it for cats. Is every cat an animal? Is every animal a cat?

My answer: .....

Think harder

Name _____ Group _____ Date _____

Think harder

No.T1

In a race, Sam is ahead of Tia. Tia is ahead of Raj. Mei is ahead of Sam. Who is third?

No.T2

Ana, Bo and Cy each have a different toy: a ball, a kite or a yo-yo. Bo does not have the kite. Cy has the ball. Who has which toy?

No.T3

Numbers 1 to 12. Which do we say when counting in 2s? Which when counting in 3s? Which in both?

No.T4

Numbers 1 to 12. Which do we NOT say when counting in 2s or when counting in 3s?

No.T5

Number riddles. Who am I?

a I am between 20 and 40. When you count in 2s you say me. When you count in 5s you say me too.

b I have 2 digits. When I add my two digits I get 5. I am less than 20.

Go further

No.C1

A secret number is between 10 and 30. It is even, and you say it when counting in 3s. It is 2 more than a number you say when counting in 5s. What is it?

No.C2

Numbers 1 to 20. Sort them in a two-loop picture with the loops "I say it counting in 2s" and "I say it counting in 3s". How many numbers go in each part? Then use the loops "counting in 2s" and "counting in 4s". What is different, and why?

No.C3

Make up your own "Who has which pet?" puzzle with three friends and three pets. Write clues so that there is only ONE answer. Swap with a partner and check that they find your answer.

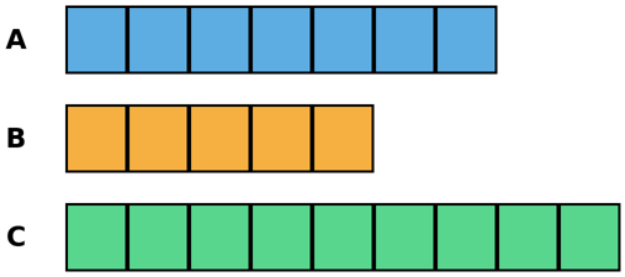

MEASURE IT!

Name _____ Group _____ Date _____

When you finish this page you may choose: carry on, or try **Think harder**.

No.1

Three ribbons are made of equal squares.

a Which ribbon is the longest? _____ (b) Which is the shortest? _____

c How many squares longer is ribbon A than ribbon B? _____

d Ribbon A and ribbon B are put end to end. How many squares long is that? _____

e Ribbon C is cut shorter by 2 squares. Which ribbon is it now the same length as? _____

No.2

Measure with cubes. Use the paper cube strip from the back of the workbook (or real cubes). Guess first, then measure. Write how far off your guess was.

Object	My guess	Measured	How far off my guess was
A pencil			
A book			
A shoe			
My choice: _____			

a Why must every cube be the same size?

.....

No.3

Ali measures a desk with his hand span. It is 6 spans long. Mei measures the same desk with her hand span. It is 8 spans long.

a Whose hand span is longer? _____

b How do you know? (Hint: measure one line with paper clips, then with cubes. Which unit gives the bigger number?)

.....

.....

No.4

If you have time: one paper clip is as long as 3 erasers.

a A desk is 6 paper clips long. How many erasers long is it? _____

b A pencil is 15 erasers long. How many paper clips long is it? _____

No.5

Mei's pencil is 8 cubes long. Ali's pencil is 3 cubes longer than Mei's. Ben's pencil is 2 cubes shorter than Mei's.

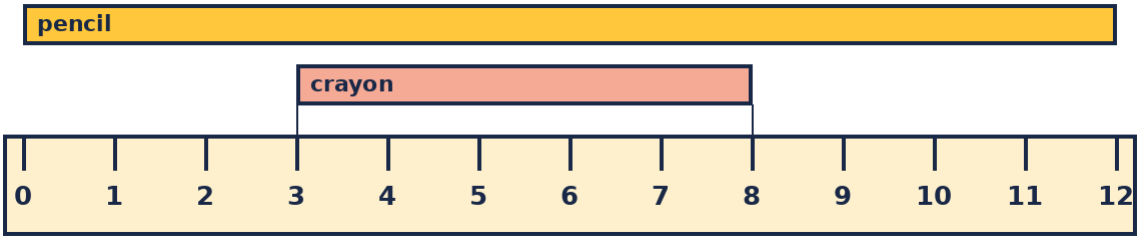

a How long is Ali's pencil? _____ cubes

b How long is Ben's pencil? _____ cubes

c If all three pencils are put end to end, how many cubes long are they? _____ cubes

No.6

Use the ruler picture (or your own ruler).

a A pencil lies from the 0 cm mark to the 12 cm mark. How long is it? _____ cm

b A crayon lies from the 3 cm mark to the 8 cm mark. How long is it? (Put a finger on 3 and hop to 8, counting each space.) _____ cm

c Measure your own pencil with your ruler. _____ cm. Is it longer or shorter than 10 cm? _____

Investigation: Is it always true?

Choose this any time you like. You do not have to finish it.

Easy first step: Measure your pencil with the cube strip. Write the number. Then measure it with a paper clip (or your finger width). Write the number.

Then: Which unit is shorter? Which one gave the bigger number? Ben says: "If I measure the same thing with a SHORTER unit, I always get a BIGGER number." Is Ben right? Guess: if a unit is half as long as a cube, what number would you get for your pencil?

Look-back Two minutes. There are no right answers. You can pass. Nobody reads it out.

Something I did well: .....

The hardest part was ... ☐ the ruler ☐ the units ☐ guessing ☐ something else: .....

What helped me: ☐ counters or objects ☐ drawing it ☐ trying again

☐ I asked for help ☐ I was not stuck

☐ I am still stuck (my tutor will look at this after class)

☐ I would like to pass

Story corner: Al-Biruni Just for fun. You can pass.

Al-Biruni (Central Asia, 973-1048) loved to measure. He used careful measuring of a hill to work out the size of the whole Earth, and found a value close to today's.

Try it: Al-Biruni needed careful measuring. A rod is 10 cm long. A table is 6 rods long. How long is the table in cm?

My answer: .....

Think harder

Name _____ Group _____ Date _____

Use objects, draw a picture or make a table. Then write how you know. Choose any question you like, in any order.

Think harder

No.T1

A ribbon lies from the 3 cm mark to the 11 cm mark on a ruler. How long is it?

No.T2

A red ribbon lies from the 2 cm mark to the 9 cm mark. A blue ribbon lies from the 5 cm mark to the 11 cm mark. Which ribbon is longer? By how many cm?

No.T3

1 clip is as long as 3 cubes. A pen is 12 cubes long. How many clips long is the pen? A ruler is 5 clips long. How many cubes long is the ruler?

No.T4

A pencil is 3 erasers long. A ruler is 2 pencils long. A desk is 4 rulers long. How many erasers long is the desk?

Go further

No.C1

A train has 3 carriages. Each is 6 cubes long. There is a gap of 1 cube between carriages. How long is the whole train? What if there are 5 carriages?

No.C2

A ribbon 30 cubes long is cut into three pieces. The first is 4 cubes longer than the second. The third is 4 cubes shorter than the second. How long is each piece?

No.C3

Make up your own measuring puzzle that uses TWO different units (for example clips and cubes). Write the puzzle and its answer. Give it to a partner and check their answer.

CHALLENGE DAY!

Story corner: Srinivasa Ramanujan Just for fun. You can pass.

Srinivasa Ramanujan (India, 1887–1920) loved numbers and sent his ideas to mathematicians in England. He treated numbers like puzzles to explore.

Try it: Puzzle: find two numbers that add up to 12 and have a difference of 2.

My answer: .....

Think harder

Name _____ Group _____ Date _____

Use objects, draw a picture or make a table. Then write how you know. Choose any question you like, in any order.

Think harder

No.T1

A pattern starts at 4 and adds 6 each time. What is the 8th number? Is 50 in the pattern?

No.T2

Mei thinks of a number, adds 7, takes away 2 and gets 19. Ben does the same and gets 25. How much bigger is Ben's number?

No.T3

Ali has 5 coins worth 60¢. He has only 5¢, 10¢ and 20¢ coins. Find every possible set.

No.T4

Votes: Apple 6, Banana 9, Orange 7. Then 5 more children vote and all choose apple. Which fruit wins now? By how many votes?

Go further

No.C1

Triangles in a row use 3, 5, 7 ... sticks. Squares in a row use 4, 7, 10 ... sticks. Which numbers of sticks, up to 31, can make a row of triangles AND (with the same number of sticks) a row of squares, with none left over? What do you notice?

No.C2

Ali has some stickers. Ben has 4 more than Ali. Mei has 3 fewer than Ben. Together they have 29. How many does each have?

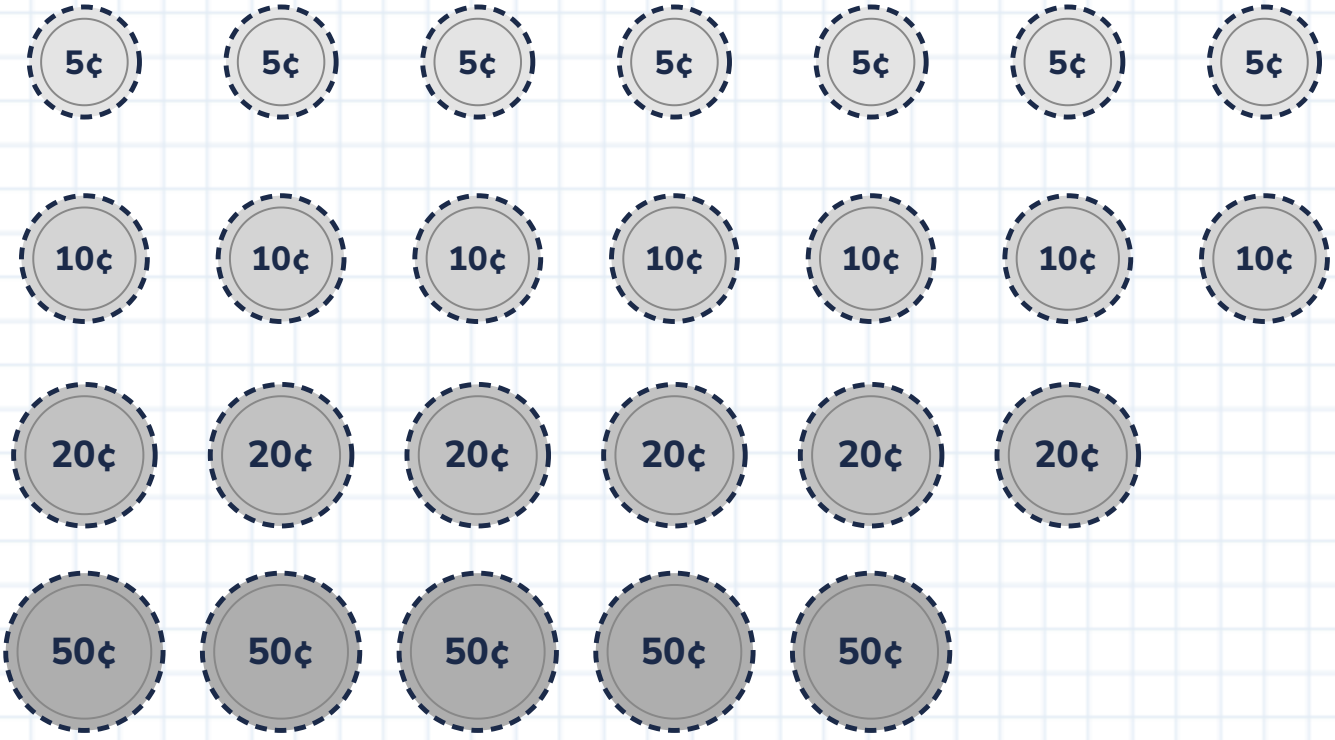

No.C3

Pick any puzzle from today (a puzzle card or a worksheet question). Change ONE thing about it (a number, a rule or a condition) to make a new puzzle. Solve your new puzzle and say what changed in the answer, and why.

Cut-outs

For Lesson 6 (Coin Combos) and Lesson 9 (Measure It!). Cut along the dashed lines and keep the pieces in an envelope.

Play coins (seven 5¢, seven 10¢, six 20¢, five 50¢)

Paper cube strips (every square is the same size)

Strip A

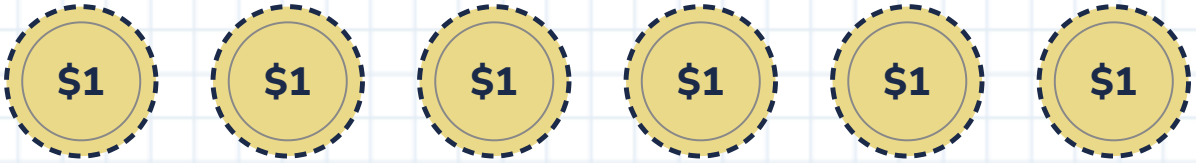

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

Strip B

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

Play notes and $1 coins

For Lesson 6 (Coin Combos). Six $1 coins, four $2, four $5, four $10 and two $50 notes.

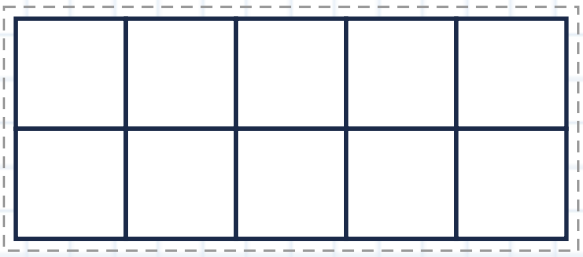

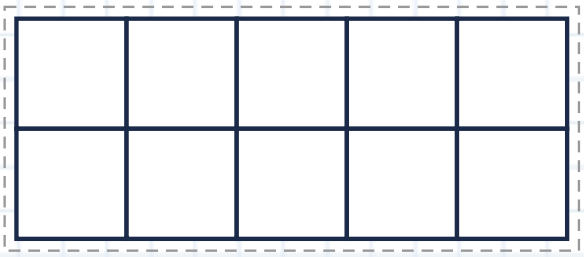

Inquirer Kit

Nothing needs to be bought. Print, cut out and keep everything in one envelope.

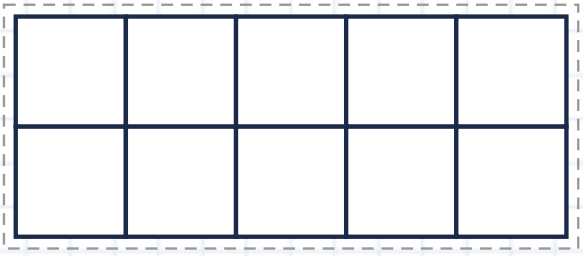

Ten-frame 1

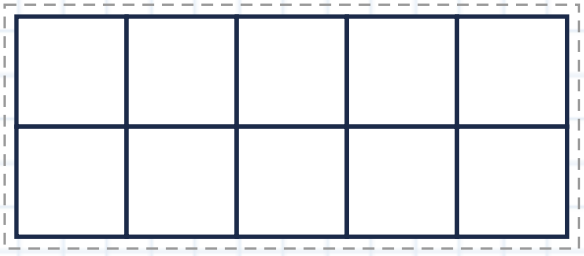

Ten-frame 2

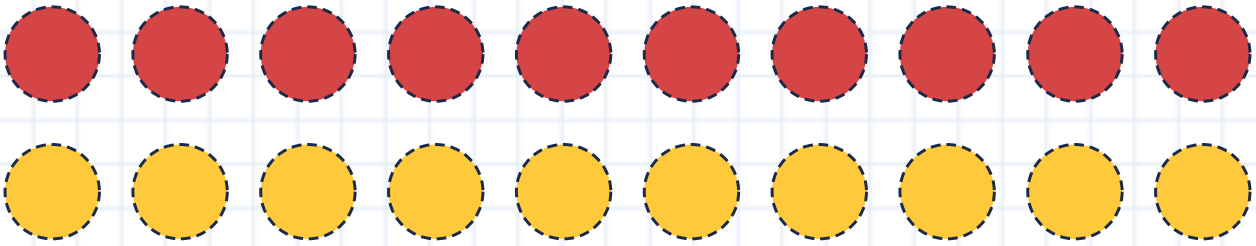

Ten-frame 3

Ten-frame 4

Counters: cut out all 20 (10 red, 10 yellow)

Cut along the dashed lines.

Number strips and sorting tiles

Number strip 0 to 50 (Lesson 1: cut out both rows and tape them end to end)

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25

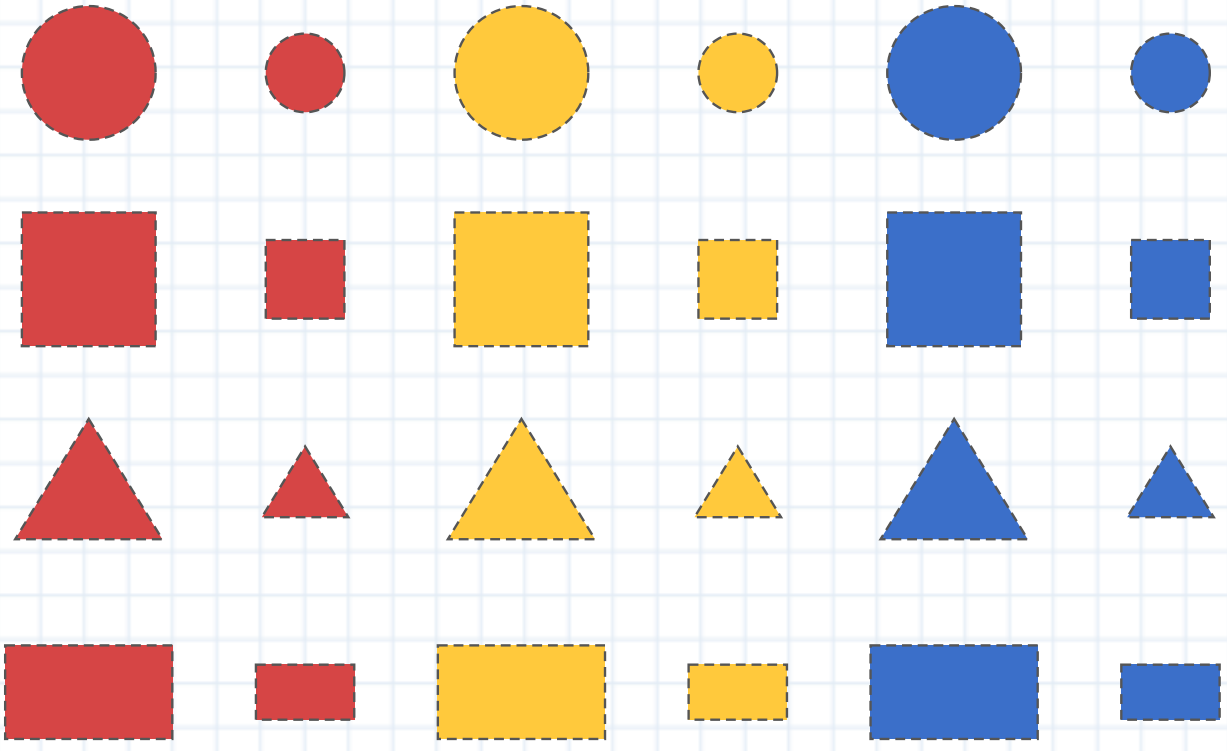

26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50

Number strips 0 to 20 (cut out; use as a number line)

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

Shape and sorting tiles (cut out all 24: 4 shapes, 3 colours, 2 sizes)

Shapes: circle, square, triangle, rectangle. Colours: red, yellow, blue. Sizes: big, small.

Puzzle cards

For Lesson 10 (Challenge Day). Cut along the dashed lines. Choose a card to start with. You may swap with another pair later. Show how you know on a whiteboard or on paper.

1. COINS

Make 45¢ with exactly 3 coins from 5¢, 10¢, 20¢ and 50¢.

2. PATTERNS

5, 8, 11, 14 … What is the 10th number? Show how you know.

3. LOGIC

Mei is taller than Ben. Ben is taller than Sam. Ali is shorter than Sam. Put them in order, tallest first.

4. MEASURING

A pencil is 6 cubes long. A pen is 4 cubes longer than the pencil. Put them end to end. How many cubes long is that?
