Teacher answer key: Primary 4, Semester 2 (DRAFT)

DRAFT: this answer key is for owner review. Do not give it to pupils. Contact: pypteltd@gmail.com (business email for now, to be changed later)

This key lists the answers and the result of the check on every page. You do not need it for routine marking: a pupil who has a working check has the right answers. To spot-check, compare the check strip with the line "Check result" below.

How the topic tags work

Each entry names the syllabus outcomes the puzzle practises, with the outcome numbers of the Primary 4 content in the Mathematics Syllabus, Primary (2021 edition, pages 33 and 34). The references are for your planning only and are not printed on the pupil pages. "Problem solving" marks a page whose questions come from the kinds found in school tests rather than from one numbered outcome.

Pages in this booklet (Terms 3 and 4)

Strand	Pages
Number and Algebra - Decimals	S2-01, S2-02, S2-03, S2-04, S2-05, S2-06, S2-20
Measurement and Geometry - Area and Volume	S2-07, S2-08, S2-09, S2-10
Measurement and Geometry - Geometry	S2-11, S2-12, S2-13, S2-14, S2-15, S2-16
Statistics - Data Representation and Interpretation	S2-17, S2-18, S2-19

The page code in the footer, for example S2-07 (P4-27), gives the page in this booklet and, in brackets, its number in the full set of 40.

© 2026 Preciouslyours Pte Ltd. Teacher answer key: not for pupils, not for resale.

S2-01 (P4-21) Decimal Place Value 1 star

Topic: Decimals: tenths, hundredths and thousandths

Syllabus outcomes: Decimals up to 3 decimal places 1.1. Notes on the tag: 1.1 (notation, representations and place values: tenths, hundredths, thousandths)
Puzzle type: Code-breaker (decimal place value). How the pupil checks: Code word (6 letters).
Answers: 1) 9.748; 2) 4; 3) 0.003; 4) 55; 5) 0.201; 6) 74
Check result: Code word: STUDIO
Teacher note: A place-value chart of ones, tenths, hundredths and thousandths, the digit in the hundredths place, the value of a digit as a decimal, the number of thousandths in a decimal, tenths and thousandths written as one decimal (the empty hundredths place needs a zero) and the number of hundredths after the ones. Answers are written without a final zero. The decoy letters stand for the usual slips: a zero left out, the decimal point put in the wrong place, or the digit instead of its value. A box left blank gives no letter and the check cannot see it.

S2-02 (P4-22) Order the Decimals 2 stars

Topic: Comparing and ordering decimals up to 3 decimal places

Syllabus outcomes: Decimals up to 3 decimal places 1.2. Notes on the tag: 1.2 (comparing and ordering decimals)
Puzzle type: Ordering (lettered decimal cards). How the pupil checks: Letters of the cards in the order asked spell a word (6 letters).
Answers: Set A (smallest first): W = 0.22, I = 0.582, Z = 0.8; Set B (greatest first): A = 4.9, R = 4.89, D = 4.797
Check result: Word: WIZARD
Teacher note: Two sets of three decimals with 1, 2 and 3 decimal places. In each set the order by value is not the order of length (the longest decimal is not always the greatest) and not the order of the digits read as whole numbers, so a pupil who compares only the digits goes wrong. Set A is read smallest first and Set B greatest first. The letters, read in the order asked, spell a word with exactly one arrangement that is a word, so no wrong order of the six cards spells a word (every wrong order was tested against a very large word list). A box left blank gives no letter and the check cannot see it.

S2-03 (P4-23) Decimal Match 1 star

Topic: Writing fractions as decimals and decimals as fractions

Syllabus outcomes: Decimals up to 3 decimal places 1.3, Decimals up to 3 decimal places 1.4. Notes on the tag: 1.3 (expressing decimals as fractions), 1.4 (expressing fractions as decimals when the denominator is a factor of 10 or 100)
Puzzle type: Matching (fraction cards and decimal cards). How the pupil checks: Word from the letters of the matching cards (6 letters).
Answers: 1) 3/5 = 0.6 (card D); 2) 4/5 = 0.8 (card O); 3) 9/25 = 0.36 (card N); 4) 1/50 = 0.02 (card K); 5) 7/20 = 0.35 (card E); 6) 3/25 = 0.12 (card Y)
Check result: Word: DONKEY
Teacher note: Rows 1 to 3 give a fraction whose denominator is a factor of ten or of one hundred and ask for the matching decimal card; rows 4 to 6 give a decimal and ask for the matching fraction card (in simplest form). Each set has five cards: three that match and two decoys made by slips such as moving the decimal point. The letters of the matching cards, read down the six rows, spell the word. A decoy in any row gives a letter that does not spell a word (tested against a very large word list). A box left blank gives no letter and the check cannot see it.

© 2026 Preciouslyours Pte Ltd. Teacher answer key: not for pupils, not for resale.

S2-04 (P4-24) Rounding Decimals 1 star

Topic: Rounding decimals to a whole number, 1 and 2 decimal places

Syllabus outcomes: Decimals up to 3 decimal places 1.5. Notes on the tag: 1.5 (rounding decimals to the nearest whole number, 1 decimal place, 2 decimal places)
Puzzle type: Choice table (rounding). How the pupil checks: Word from the letters of the right choices (6 letters).
Answers: 1) 4.952 to 2 decimal places = 4.95; 2) 9.872 to 2 decimal places = 9.87; 3) 2.94 to 1 decimal place = 2.9; 4) 4.88 to 1 decimal place = 4.9; 5) 8.45 to the nearest whole number = 8; 6) 9.31 to the nearest whole number = 9
Check result: Word: COBALT
Teacher note: Six roundings: two to the nearest whole number, two to 1 decimal place and two to 2 decimal places. Each row offers four numbers: the right one and three slips (cut off instead of rounded, rounded the wrong way, or rounded to a different place). Numbers exactly half way are not used. The letters of the right choices, read down the rows, spell the word; every other way of choosing was tested against a very large word list and none spells a word. A box left blank gives no letter and the check cannot see it.

S2-05 (P4-25) Magic Decimals 2 stars

Topic: Adding and subtracting decimals up to 2 decimal places

Syllabus outcomes: Decimals: Addition and Subtraction 2.1. Notes on the tag: 2.1 (adding and subtracting decimals, up to 2 decimal places)
Puzzle type: Magic square (decimals). How the pupil checks: Total: all 3 rows, 3 columns and 2 corner-to-corner lines make the same total.
Answers: Empty boxes, row by row: 3.08, 2.33, 3.33, 2.58, 1.58
Check result: Every line makes 6.99.
Teacher note: A 3 by 3 square of decimals with 4 numbers given and 5 empty boxes. Every row, every column and both corner-to-corner lines make 6.99. The pupil uses the total to find the missing numbers by adding and subtracting decimals (up to 2 decimal places). The middle number is never given. The solution was found by an independent solver and is the only one. Any single wrong number breaks at least two of the eight lines, so the check always shows a slip. A box left blank cannot add up.

S2-06 (P4-26) Decimal Shares 2 stars

Topic: Multiplying and dividing decimals by a 1-digit number

Syllabus outcomes: Decimals: Multiplication and Division 3.1, Decimals: Multiplication and Division 3.2, Decimals: Multiplication and Division 3.3 (problem solving). Notes on the tag: 3.1 (multiplying and dividing decimals by a 1-digit whole number), 3.2 (dividing a whole number by a whole number with a decimal quotient), 3.3 (rounding answers)
Puzzle type: Code-breaker (decimal operations). How the pupil checks: Code word (6 letters).
Answers: 1) 27.04; 2) 6.53; 3) 3.625; 4) 2.56; 5) 11.2; 6) 1.9
Check result: Code word: FAMILY
Teacher note: A decimal with 2 places times a 1-digit number, a decimal divided by a 1-digit number, a whole number divided by 8 (3 decimal places), a length cut into equal pieces, a whole number divided by 4 or 5 and a division that does not end, rounded to 1 decimal place. Answers are written without a final zero. The decoy letters stand for the usual slips: the decimal point put in the wrong place, the division the wrong way round, or the answer not rounded. A box left blank gives no letter and the check cannot see it.

© 2026 Preciouslyours Pte Ltd. Teacher answer key: not for pupils, not for resale.

S2-07 (P4-27) Missing Sides 1 star

Topic: Finding a side of a rectangle or a square from its area or perimeter

Syllabus outcomes: Area and Perimeter 1.1, Area and Perimeter 1.2. Notes on the tag: 1.1 (finding one dimension of a rectangle given the other dimension and its area/perimeter), 1.2 (finding the length of one side of a square given its area/perimeter)
Puzzle type: Code-breaker (missing sides). How the pupil checks: Code word (6 letters).
Answers: 1) 5 cm (square, perimeter 20); 2) 16 cm (rectangle, area 96); 3) 13 cm (rectangle, area 91); 4) 12 cm (rectangle, perimeter 74); 5) 7 cm (square, area 49); 6) 6 cm (rectangle, perimeter 36)
Check result: Code word: FRIDGE
Teacher note: Six figures drawn to scale: a rectangle with its area and one side given (find the other side), a rectangle with its perimeter and one side given, a square with its perimeter and a square with its area (find the side). The decoy letters stand for the usual slips: dividing the perimeter by 2 and stopping, using the perimeter as the area, or adding the two sides. A box left blank gives no letter and the check cannot see it. The figures are drawn to scale but a pupil is not asked to measure them.

S2-08 (P4-28) L-Shapes 1 star

Topic: Area and perimeter of figures made of rectangles

Syllabus outcomes: Area and Perimeter 1.3. Notes on the tag: 1.3 (finding the area and perimeter of composite figures made up of rectangles and squares)
Puzzle type: Code-breaker (composite figures). How the pupil checks: Code word (6 letters).
Answers: 1) area = 74 (L figure); 2) perimeter = 42 (T figure); 3) area = 64 (U figure); 4) perimeter = 48 (stair figure); 5) perimeter = 34 (L figure); 6) area = 55 (T figure)
Check result: Code word: WALNUT
Teacher note: Six figures made of rectangles (two L-shapes, two T-shapes, a U-shape and a step shape), each with every side marked except one horizontal and one vertical side. The pupil finds the two missing sides, then the area (three figures) or the perimeter (three figures). The decoy letters stand for the usual slips: the area of the whole rectangle round the figure, the perimeter of that rectangle, or area and perimeter mixed up. A box left blank gives no letter and the check cannot see it. The figures are drawn to scale but a pupil is not asked to measure them.

S2-09 (P4-29) Match the Figures 2 stars

Topic: Area and perimeter of figures made of rectangles

Syllabus outcomes: Area and Perimeter 1.3. Notes on the tag: 1.3 (finding the area and perimeter of composite figures made up of rectangles and squares)
Puzzle type: Matching (clues to figures). How the pupil checks: Word from the letters of the figures that fit the clues (6 letters).
Answers: clue 1 (perimeter 38) -> figure C; clue 2 (perimeter 44) -> figure R; clue 3 (area 66) -> figure A; clue 4 (perimeter 40) -> figure F; clue 5 (area 42) -> figure T; clue 6 (area 72) -> figure Y
Check result: Word: CRAFTY
Teacher note: Six figures made of rectangles (L-shapes, T-shapes, a U-shape and a step shape), each with two sides not marked. The pupil finds the area and the perimeter of every figure, then matches six clues (three about an area and three about a perimeter) to the figures. The twelve numbers are all different, so each clue fits exactly one figure. The letters on the figures, read in the order of the clues, spell the word; a wrong match gives a letter that is another letter of the word, and no wrong order of the six letters spells a word (tested against a very large word list). A box left blank gives no letter and the check cannot see it. The figures are drawn to scale but a pupil is not asked to measure them.

© 2026 Preciouslyours Pte Ltd. Teacher answer key: not for pupils, not for resale.

S2-10 (P4-30) Joined Shapes 2 stars

Topic: Area and perimeter when squares and rectangles are joined or cut

Syllabus outcomes: Area and Perimeter 1.1, Area and Perimeter 1.2, Area and Perimeter 1.3 (problem solving). Notes on the tag: 1.3 (finding the area and perimeter of composite figures made up of rectangles and squares), 1.1 and 1.2 (missing sides)
Puzzle type: Code-breaker (joined shapes). How the pupil checks: Code word (6 letters).
Answers: 1) 192; 2) 68; 3) 24; 4) 128; 5) 32; 6) 48
Check result: Code word: CANOPY
Teacher note: Six stories about squares and rectangles that are joined, cut or put round another shape: identical squares in a row (find the side from the perimeter, then the area), a corner cut from a rectangle (the perimeter does not change), a square cut into four small squares, a path round a garden, two rectangles joined along their long sides and a rectangle whose length is 3 times its width. The decoy letters stand for the usual slips: giving the area when the perimeter was asked, forgetting that the cut corner leaves the perimeter the same, or using the width of the path once instead of twice. A box left blank gives no letter and the check cannot see it.

S2-11 (P4-31) Shape Facts 1 star

Topic: Properties of rectangles and squares

Syllabus outcomes: Rectangle and Square 2.1. Notes on the tag: 2.1 (properties of rectangle and square, excluding diagonal properties)
Puzzle type: Choice table (true or false). How the pupil checks: Word from the letters of the right choices (6 letters).
Answers: 1) False: A rectangle has 4 pairs of equal sides.; 2) True: A rectangle has 2 pairs of parallel sides.; 3) False: Opposite sides of a rectangle are perpendicular.; 4) False: Sides that meet at a corner of a rectangle are parallel.; 5) False: Only two sides of a square are equal.; 6) True: A square has 4 right angles.
Check result: Word: BOTANY
Teacher note: Six statements about rectangles and squares: right angles, pairs of parallel sides, equal sides, pairs of equal sides, opposite sides and sides that meet at a corner. Diagonals are not used. All four sides of a square are equal and a square has two pairs of parallel sides. Statements about pairs of equal sides are only made about rectangles, because the number of pairs in a square can be counted two ways. A statement about a square being a rectangle is not asked. Each row has a True and a False, each with a letter. The letters of the right answers, read down the rows, spell the word; every other way of choosing was tested against a very large word list and none spells a word. A box left blank gives no letter and the check cannot see it.

S2-12 (P4-32) Complete the Corner 2 stars

Topic: Rectangles and squares on a dot grid

Syllabus outcomes: Rectangle and Square 2.1, Rectangle and Square 2.2. Notes on the tag: 2.2 (drawing rectangles and squares), 2.1 (properties of rectangle and square)
Puzzle type: Choice figures (lettered points). How the pupil checks: Word from the letters of the points that complete the shapes (6 letters).
Answers: 1) T: fourth corner of the rectangle; 2) U: fourth corner of the square; 3) R: fourth corner of the rectangle; 4) K: fourth corner of the square; 5) E: fourth corner of the rectangle; 6) Y: fourth corner of the square
Check result: Word: TURKEY
Teacher note: Six dot grids, each with two sides of a rectangle (three of the corners) drawn. Three points carry letters; one of them is the fourth corner of the rectangle or square the card names and the other two are ordinary grid points that do not complete it. Three shapes are squares and three are other rectangles, some of them turned on the grid. The letters of the right points, read down the cards, spell the word; every other way of choosing was tested against a very large word list and none spells a word. Drawing the fourth corner and the missing sides is not checked, only the choice of the point. A box left blank gives no letter and the check cannot see it.

© 2026 Preciouslyours Pte Ltd. Teacher answer key: not for pupils, not for resale.

S2-13 (P4-33) Mirror Lines 1 star

Topic: Line symmetry: is it a line of symmetry? is the figure symmetric?

Syllabus outcomes: Line Symmetry 3.1, Line Symmetry 3.2. Notes on the tag: 3.1 (identifying symmetric figures), 3.2 (determining whether a straight line is a line of symmetry of a symmetric figure)
Puzzle type: Choice cards (symmetry). How the pupil checks: Word from the letters of the right choices (6 letters).
Answers: 1) Yes (trap without a line); 2) No (triangle with the line s); 3) Yes (kite with the line v); 4) No (tee with the line h); 5) Yes (house with the line v); 6) Yes (tee without a line)
Check result: Word: WOMBAT
Teacher note: Six figures. Four show a dashed line and ask whether it is a line of symmetry (a rectangle cut along its middle, along its diagonal, a triangle cut from a corner to the middle of the opposite side, a figure with the line off centre, and similar). Two show no line and ask whether any line of symmetry exists (a scalene triangle and a trapezium with a right angle have none). The right answer was found by reflecting every figure in the line, or in every possible line through its middle, with a separate program. Each row has a Yes and a No, each with a letter. The letters of the right answers, read down the cards, spell the word; every other way of choosing was tested against a very large word list and none spells a word. A box left blank gives no letter and the check cannot see it.

S2-14 (P4-34) Complete the Figure 2 stars

Topic: Completing a symmetric figure on a square grid

Syllabus outcomes: Line Symmetry 3.1, Line Symmetry 3.3. Notes on the tag: 3.3 (completing a symmetric figure with respect to a given line of symmetry on square grid), 3.1 (identifying symmetric figures)
Puzzle type: Code-breaker (symmetry grids). How the pupil checks: Code word (6 letters).
Answers: 1) 28; 2) row 4: 4; 3) column 9: 5; 4) 40; 5) column 3: 2; 6) row 9: 3
Check result: Code word: FATHOM
Teacher note: Two square grids with half of a figure shaded and a dashed line as the mirror (a vertical line in figure 1, a horizontal line in figure 2). The pupil shades the other half so that the whole figure is symmetric, then answers three counting questions about each whole figure (the total, a row and a column, taken on the side that was empty). The answers can only be right if the mirror image is right, so they check the drawing indirectly: a pupil who shades the wrong squares usually gets different counts. The pupil's own shading is not seen, so a lucky wrong drawing with the right counts is possible. The decoy letters stand for the counts of the half that was already shaded. A box left blank gives no letter and the check cannot see it.

S2-15 (P4-35) Name the Solid 1 star

Topic: Cube, cuboid, cone, cylinder, prism and pyramid

Syllabus outcomes: Nets 4.1. Notes on the tag: 4.1 (identifying 2D representations of cube, cuboid, cone, cylinder, prism, pyramid)
Puzzle type: Choice cards (drawings of solids). How the pupil checks: Word from the letters of the right choices (6 letters).
Answers: 1) square pyramid; 2) cylinder; 3) cube; 4) cone; 5) cuboid; 6) triangular prism
Check result: Word: DEVOUR
Teacher note: Six drawings of solids: a cube, a cuboid, a cone, a cylinder, a triangular prism and a square pyramid, each with three names to choose from. The wrong names are the solids that look most alike (cube and cuboid, prism and pyramid, cone and pyramid, cylinder and prism). The cuboid is drawn at least twice as long as it is high and the cube has equal sides. The letters of the right choices, read down the cards, spell the word; every other way of choosing was tested against a very large word list and none spells a word. The pictures are drawings of solids; no real solid is handled. A box left blank gives no letter and the check cannot see it.

© 2026 Preciouslyours Pte Ltd. Teacher answer key: not for pupils, not for resale.

S2-16 (P4-36) Which Net? 2 stars

Topic: Nets of a cube, a cuboid, a prism and a pyramid

Syllabus outcomes: Nets 4.3, Nets 4.4. Notes on the tag: 4.3 (identifying the nets of 3D solids), 4.4 (identifying the solid which can be formed by a given net)
Puzzle type: Choice cards (nets). How the pupil checks: Word from the letters of the right choices (6 letters).
Answers: 1) square pyramid; 2) triangular prism; 3) no solid; 4) cuboid; 5) cube; 6) cube
Check result: Word: BOUNTY
Teacher note: Six nets: two nets of a cube (six squares that fold into a cube), a net of a cuboid, a net of a triangular prism, a net of a square pyramid and a set of six squares that does NOT fold into a cube (the answer is 'no solid'). Each net has three names to choose from. Whether six squares fold into a cube was decided by rolling a cube over them with a separate program. The cuboid net has six rectangles, the prism net two triangles and three rectangles, the pyramid net one square and four triangles. The letters of the right choices, read down the cards, spell the word; every other way of choosing was tested against a very large word list and none spells a word. Making the net by drawing and cutting is not asked. A box left blank gives no letter and the check cannot see it.

S2-17 (P4-37) Complete the Table 1 star

Topic: Completing a table from given data

Syllabus outcomes: Tables, Line Graphs and Pie Charts 1.1, Tables, Line Graphs and Pie Charts 1.2. Notes on the tag: 1.1 (completing a table from given data), 1.2 (reading and interpreting data from tables)
Puzzle type: Code-breaker (table with totals). How the pupil checks: Totals and code word (6 letters).
Answers: 1) 11; 2) 13; 3) 30; 4) 7; 5) 12; 6) 36
Check result: Code word: FLIGHT
Teacher note: A table of three classes and three clubs with a total for each row, each column and the whole table. Six of the sixteen numbers are missing (never the grand total, at least three inside the table). Every missing number can be found by subtracting or adding along a row or a column. The pupil writes the six numbers in reading order and looks them up in the code table. A wrong number makes the rows or columns fail to add up and a letter that does not spell the word. The decoy letters stand for the numbers one or ten away. A box left blank gives no letter and the check cannot see it.

S2-18 (P4-38) Line Graph Detective 1 star

Topic: Reading a line graph

Syllabus outcomes: Tables, Line Graphs and Pie Charts 1.2. Notes on the tag: 1.2 (reading and interpreting data from line graphs)
Puzzle type: Code-breaker (line graph). How the pupil checks: Code word (6 letters).
Answers: 1) 25; 2) 35; 3) 10; 4) 15; 5) 65; 6) 30. Data: Mon 30, Tue 45, Wed 35, Thu 55, Fri 45, Sat 25
Check result: Code word: COUSIN
Teacher note: A line graph of the books borrowed on six days, scale 0 to 60 with a dotted line half way between the numbers (so every point is a multiple of 5). Six questions: two readings, a difference between two days, a rise between two neighbouring days, a total of two days and the difference between the busiest and the quietest day. The decoy letters stand for the usual slips: reading one line too high or too low, or adding when the question asks for the difference. A box left blank gives no letter and the check cannot see it.

© 2026 Preciouslyours Pte Ltd. Teacher answer key: not for pupils, not for resale.

S2-19 (P4-39) Pie Chart 2 stars

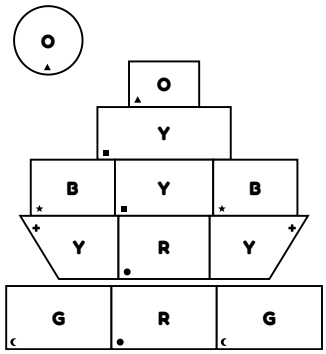

Topic: Reading a pie chart

Syllabus outcomes: Tables, Line Graphs and Pie Charts 1.2, Fraction of a Set 2.1 (problem solving). Notes on the tag: 1.2 (reading and interpreting data from pie charts)
Puzzle type: Code-breaker (pie chart). How the pupil checks: Code word (6 letters).
Answers: 1) 80; 2) 120; 3) 40; 4) 200; 5) 240; 6) 160. Slices: Noodles 3, Soup 2, Bread 1, Pasta 2; one slice is 40 pupils
Check result: Code word: SHADOW
Teacher note: A pie chart cut into 8 equal slices (thin dotted lines) with four or five sectors, and the total number of pupils. The pupil counts the slices of a sector, finds what fraction of the pie it is, and finds that fraction of the total. Six questions: two sectors, a difference between two sectors, two sectors together, the pupils who did not choose one food and half of the pie. The decoy letters stand for the usual slips: giving the number of slices instead of pupils, or one slice too many or too few. A box left blank gives no letter and the check cannot see it.

S2-20 (P4-40) Colour the Ferry 2 stars

Topic: Decimals: operations, rounding, fractions as decimals

Syllabus outcomes: Decimals up to 3 decimal places 1.2, Decimals up to 3 decimal places 1.4, Decimals up to 3 decimal places 1.5, Decimals: Addition and Subtraction 2.1, Decimals: Multiplication and Division 3.1, Decimals: Multiplication and Division 3.2. Notes on the tag: 1.2, 1.4, 1.5, 2.1, 3.1, 3.2 (comparing decimals, fractions as decimals, rounding, adding and subtracting, multiplying and dividing decimals)
Puzzle type: Colour by code (pupils colour with their own crayons). How the pupil checks: Colour key and tally: every answer must be on the key, the number of parts of each colour must match the box, and parts with the same small mark match.
Answers: Colour key: 0.6 = yellow, 1.25 = red, 2.4 = blue, 3.05 = green, 5 = orange
Check result: Tally: yellow 4, red 2, blue 2, green 2, orange 2; parts with the same small mark match.

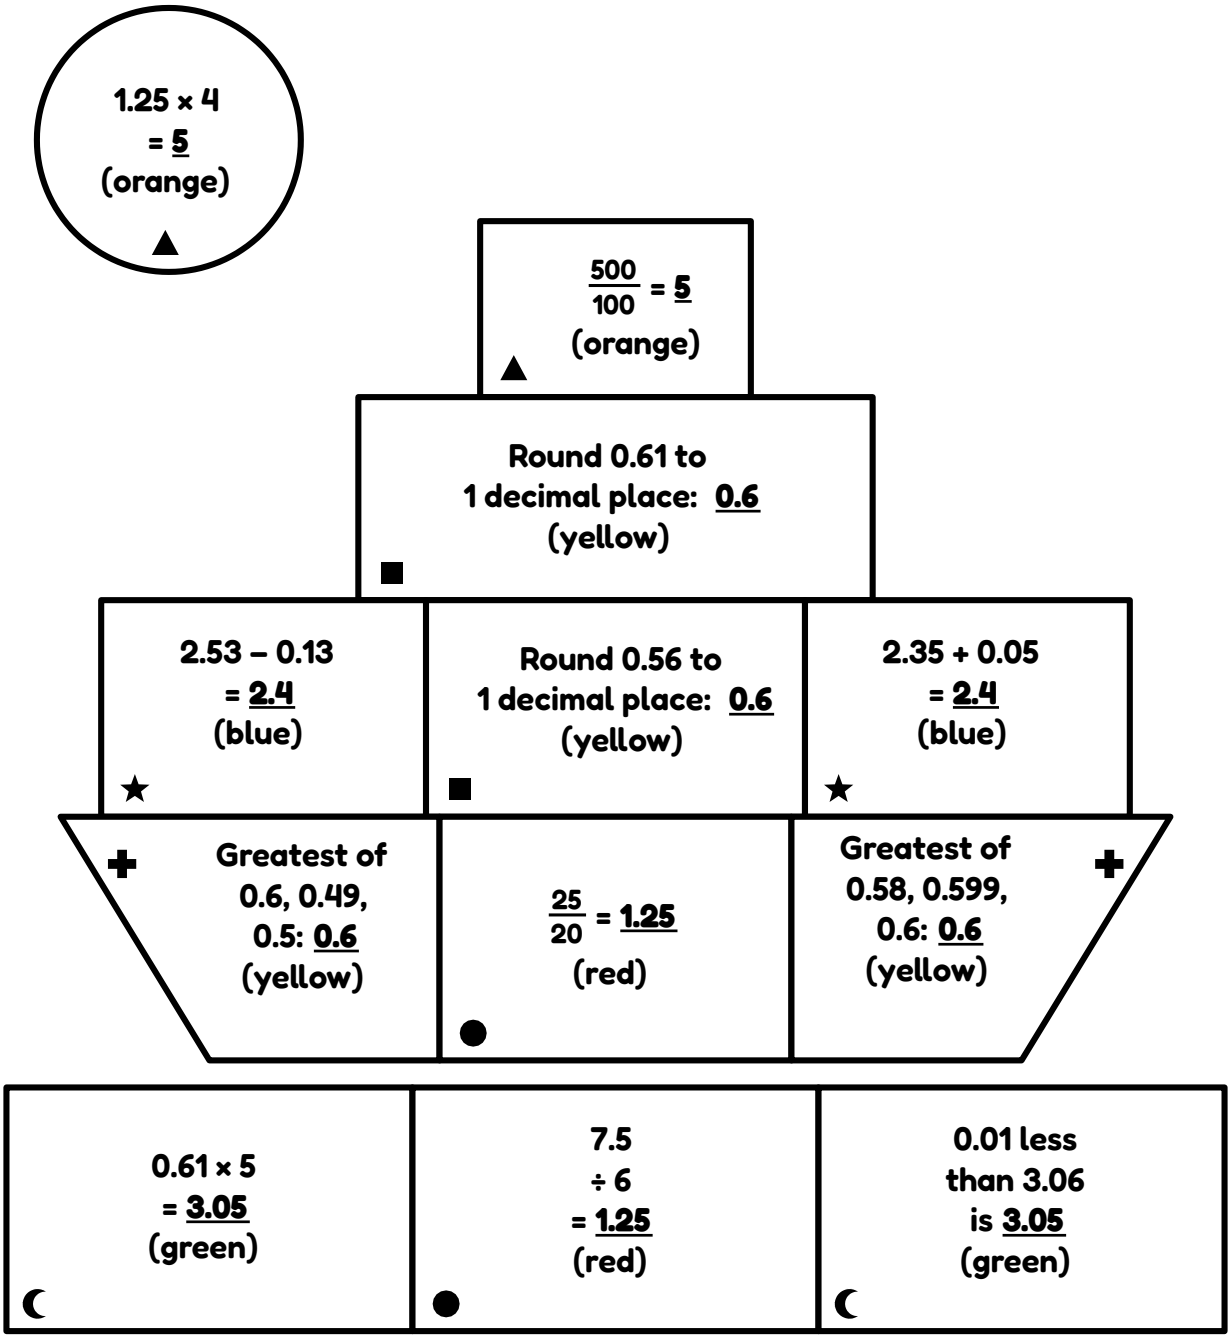

Teacher note: Every part works with decimals up to 2 decimal places: adding or subtracting, multiplying or dividing by a 1-digit number, a whole number divided by a whole number, rounding to a whole number, 1 or 2 decimal places, a fraction written as a decimal, the greatest of three decimals or 0.1 or 0.01 more or less. Pupils colour the black-and-white outline with their own crayons (or, for a pencil-only copy, write Y, R, B, G or O in each part: the tally and the matching parts can be checked the same way). Check strip: count the parts of each colour (the tally is printed); parts with the same small mark match.

© 2026 Preciouslyours Pte Ltd. Teacher answer key: not for pupils, not for resale.

Answers: S2-20 (P4-40) Colour the Ferry

Every part shows the question, the answer underlined and the colour in brackets. Pupils colour their own copy. Colour key: 0.6 = yellow, 1.25 = red, 2.4 = blue, 3.05 = green, 5 = orange.

© 2026 Preciouslyours Pte Ltd. Teacher answer key: not for pupils, not for resale.
